National Science Foundation (U.S.), **Observing Animal Behaviour** Marian Stamp Dawkins, 2007-10-18 This book introduces the reader to the power of observation before and sometimes instead of experimental manipulation in the study of animal behaviour It starts with simple and easily accessible methods suitable for student projects before going on to demonstrate the possibilities that now exist for far more sophisticated analyses of observational data At a time when animal welfare considerations are attracting political as well as scientific debate the potential for non intrusive studies on animals is being increasingly recognized Observation emerges as a valuable alternative approach often yielding highly informative results in situations such as on zoos farms or for wild animals where more invasive experimental techniques would be undesirable unethical or just plain impossible However to justify its place alongside experimentation as a rigorous scientific

method observation needs to be just as disciplined and systematic and have just as much attention paid to project design in the way that observations are made and recorded Observing Animal Behaviour takes the reader through all these stages from the initial observations to the formulation of hypotheses and their subsequent testing with further systematic observations Although designed principally as a companion text for advanced undergraduate and students taking courses in animal behaviour this accessible text will be essential reading for anyone wanting to study animal behaviour using observational methods rather than experimentation and assumes no previous knowledge of animals statistics or scientific method It will be of particular relevance and use to those professional researchers and consultants in the behavioural sciences who seek a compact but comprehensive introduction to the quantitative observation of animal behaviour

On Becoming Aware Natalie Depraz, Francisco J. Varela, Pierre Vermersch, 2003 This book searches for the sources and means for a disciplined practical approach to exploring human experience The spirit of this book is pragmatic and relies on a Husserlian phenomenology primarily understood as a method of exploring our experience The authors do not aim at a neo Kantian a priori new theory of experience but instead they describe a concrete activity how we examine what we live through how we become aware of our own mental life The range of experiences of which we can become aware is vast all the normal dimensions of human life perception motion memory imagination speech everyday social interactions cognitive events that can be precisely defined as tasks in laboratory experiments e g a protocol for visual attention but also manifestations of mental life more fraught with meaning dreaming intense emotions social tensions altered states of consciousness The central assertion in this work is that this immanent ability is habitually ignored or at best practiced unsystematically that is to say blindly Exploring human experience amounts to developing and cultivating this basic ability through specific training Only a hands on non dogmatic approach can lead to progress and that is what animates this book Series B
