

Comparison of automated procedures for ARMA model identification

TETIANA STADNYTSKA, SIMONE BRAUN, AND JOACHIM WERNER
University of Heidelberg, Heidelberg, Germany

This article evaluates the performance of three automated procedures for ARMA model identification commonly available in current versions of SAS for Windows: MINIC, SCAN, and ESACF. Monte Carlo experiments with different model structures, parameter values, and sample sizes were used to compare the methods. On average, the procedures either correctly identified the simulated structures or selected parsimonious nearly equivalent mathematical representations in at least 60% of the trials conducted. For autoregressive models, MINIC achieved the best results. SCAN was superior to the other two procedures for mixed structures. For moving-average processes, ESACF obtained the most correct selections. For all three methods, model identification was less accurate for low dependency than for medium or high dependency processes. The effect of sample size was more pronounced for MINIC than for SCAN and ESACF. SCAN and ESACF tended to select higher-order mixed structures in larger samples. These findings are confined to stationary nonseasonal time series.

Time series analysis deals with repeated and equally spaced observations on a single unit. Classical statistical techniques are no longer appropriate here because data points cannot be assumed independent and uncorrelated. One of the most widely employed procedures for time series data is the *autoregressive integrated moving-average* (ARIMA) approach proposed by Box and Jenkins (1970). Since Glass, Willson, and Gottman (1975) introduced the ARIMA technique to the social and behavioral sciences, this methodology has been increasingly employed in different research fields (Delcor, Cadopi, Delignières, & Mesure, 2002; Fortes, Ninot, & Delignières, 2005; McCleary & Hay, 1980; Ninot, Fortes, & Delignières, 2005; Velicer & Colby, 1997; Velicer & Fava, 2003; Wagenmakers, Farrell, & Ratcliff, 2004).

The idea behind the Box–Jenkins procedure is to infer the true data generating process from an observed time series. The ARIMA strategy is based on a three-step iterative cycle of model identification, model estimation, and diagnostic checks in model accuracy. (For detailed treatments of the technique, see Bowerman & O'Connell, 1993; Box, Jenkins, & Reinsel, 1994; Brockwell & Davis, 2002; and Makridakis, Wheelwright, & Hyndman, 1998.) *Model identification* step provides insight into properties of the underlying stochastic process of the variable under study. Once the process has been inferred, it can be used either to test some hypothesis about its generating mechanism, forecast future values of the series, or remove dependency from the data so that it meets assumptions of the general linear model, as in interrupted time series experiments. In the first two cases, accurate model selection is indispensable.

Especially in theory testing, where model identification represents the primary goal of the analysis, model mis-

specification implies serious conceptual consequences and should be omitted. For instance, autoregressive models are characteristic of behavior containing internal temporal regularity, whereas moving-average models are characteristic of systems depending on external and occasional events. Thus autoregressive patterns are typically found in the studies investigating addictive behaviors (Rosel & Elósegui, 1994; Velicer, Redding, Richmond, Greeley, & Swift, 1992; Velicer, Rossi, Diclemente, & Prochaska, 1996). For nonaddictive habits of occasional smokers or drinkers, however, moving-average models are more appropriate. Analyzing travel behavior of different population groups, Fraschini and Axausten (2001) found that autoregressive models predominated in the age classes between 35 and 65 years old, reflecting more regular behavior probably caused by fixed employment and a more settled lifestyle. In contrast, moving-average patterns were mainly identified for younger participants, indicating the predominance of external influences on subject behavior. According to Velicer and Fava (2003), three popular hypotheses concerning nicotine's role in maintaining smoking, such as the fixed effect, nicotine regulation, and multiple regulation models, imply competing ARIMA patterns.

When the goal of research is to determine the efficacy of a specific intervention, as in interrupted time series analysis, model identification represents an intermediate step serving to transform the data (Glass et al., 1975). Hence, accurate model selection is not crucial here. Several alternative procedures avoiding model identification have been proposed in the last three decades (Algina & Swaminathan, 1977, 1979; Crosbie, 1993; Gottman, 1981; McKnight, McKean, & Huitema, 2000; Simonson, 1977; Velicer & McDonald, 1984,

Arma Model Identification:

ARMA Model Identification ByoungSeon Choi, 2012-12-06 During the last two decades considerable progress has been made in statistical time series analysis The aim of this book is to present a survey of one of the most active areas in this field the identification of autoregressive moving average models i e determining their orders Readers are assumed to have already taken one course on time series analysis as might be offered in a graduate course but otherwise this account is self contained The main topics covered include Box Jenkins method inverse autocorrelation functions penalty function identification such as AIC BIC techniques and Hannan and Quinn s method instrumental regression and a range of pattern identification methods Rather than cover all the methods in detail the emphasis is on exploring the fundamental ideas underlying them Extensive references are given to the research literature and as a result all those engaged in research in this subject will find this an invaluable aid to their work *An Exploration of Time Series ARMA Model Identification Techniques* James Arthur

Calvin, Colorado State University. Department of Statistics, 1980 **Model Identification and Data Analysis** Sergio Bittanti, 2019-04-02 This book is about constructing models from experimental data It covers a range of topics from statistical data prediction to Kalman filtering from black box model identification to parameter estimation from spectral analysis to predictive control Written for graduate students this textbook offers an approach that has proven successful throughout the many years during which its author has taught these topics at his University The book Contains accessible methods explained step by step in simple terms Offers an essential tool useful in a variety of fields especially engineering statistics and mathematics Includes an overview on random variables and stationary processes as well as an introduction to discrete time models and matrix analysis Incorporates historical commentaries to put into perspective the developments that have brought the discipline to its current state Provides many examples and solved problems to complement the presentation and facilitate comprehension of the techniques presented **Time Series Modelling of Water Resources and Environmental**

Goodwin, 2012-12-06 This book is based on a workshop entitled Model Identification and Adaptive Control From Windsurfing

to Telecommunications held in Sydney Australia on December 16 2000 The workshop was organized in honour of Professor Brian D.O. Anderson in recognition of his seminal contributions to systems science over the past 4 decades The chapters in the book have been written by colleagues friends and students of Brian Anderson A central theme of the book is the inter relationship between identification and the use of models in real world applications This theme has underpinned much of Brian Anderson's own contributions The book reflects on these contributions as well as making important statements about possible future research directions The subtitle of the book From Windsurfing to Telecommunications recognizes the fact that many common life experiences such as those we encounter when learning to ride a windsurfer are models for design methods that can be used on real world advanced technological control problems In deed Brian Anderson extensively explored this link in his research work

Autoregressive Moving-average (ARMA) Model Identification for Degenerate Time Series with Application to Maneuvering Target Tracking Norman Owen Speakman, 1985 Research was conducted in the general areas of time series analysis and stochastic realization Results were then applied to the specific problem of tracking a highly maneuverable aircraft target An algorithm was developed to identify the order and parameters of the minimum autoregressive moving average ARMA model of a multi variable system given the output autocorrelation sequence Studies were also conducted in the area of degenerate time series modeling It was found that degeneracy in vector valued time series is caused by the presence of one or more deterministic relationships in the time series ARMA models for degenerate time series can be identified by finding and extracting the deterministic relationships from the time series The result is a reduced dimension stochastic model of the system The model found will have fewer white noise inputs than outputs An AR

Identification and Control Using Volterra Models F.J. Doyle, R.K. Pearson, B.A. Oggunnaike, 2012-12-06 Much has been written about the general difficulty of developing the models required for model based control of processes whose dynamics exhibit significant nonlinearity for further discussion and references see Chapter 1 In fact the development of these models stands as a significant practical impediment to widespread industrial application of techniques like nonlinear model predictive control NMPC whose linear counterpart has profoundly changed industrial practice One of the reasons for this difficulty lies in the enormous variety of nonlinear models different classes of which can be less similar to each other than they are to the class of linear models Consequently it is a practical necessity to restrict consideration to one or a few specific nonlinear model classes if we are to succeed in developing understanding and using nonlinear models as a basis for practical control schemes Because they represent a highly structured extension of the class of linear finite impulse response FIR models on which industrially popular linear MPC implementations are based this book is devoted to the class of discrete time Volterra models and a few other closely related nonlinear model classes The objective of this book is to provide a useful reference for researchers in the field of process control and closely related areas collecting a reasonably wide variety of results that may be found in different parts of the large literature that exists on the general

topics of process control nonlinear systems theory statistical time series models biomedical engineering and digital signal processing among others **Automatic Autocorrelation and Spectral Analysis** Petrus M.T. Broersen, 2006-08-02

Automatic Autocorrelation and Spectral Analysis gives random data a language to communicate the information they contain objectively It takes advantage of greater computing power and robust algorithms to produce enough candidate models of a given group of data to be sure of providing a suitable one Improved order selection guarantees that one of the best often the best will be selected automatically Written for graduate signal processing students and for researchers and engineers using time series analysis for applications ranging from breakdown prevention in heavy machinery to measuring lung noise for medical diagnosis this text offers tuition in how power spectral density and the autocorrelation function of stochastic data can be estimated and interpreted in time series models extensive support for the MATLAB ARMAse1 toolbox applications showing the methods in action appropriate mathematics for students to apply the methods with references for those who wish to develop them further **Advances in Neural Networks - ISNN 2004** Fuliang Yin, Jun Wang, Chengan Guo, 2011-04-07

This book constitutes the proceedings of the International Symposium on Neural Networks ISNN 2004 held in Dalian Liaoning China during August 19-21 2004 ISNN 2004 received over 800 submissions from authors in 46 continents Asia Europe North America South America and Oceania and 23 countries and regions mainland China Hong Kong Taiwan South Korea Japan Singapore India Iran Israel Turkey Hungary Poland Germany France Belgium Spain UK USA Canada Mexico Venezuela Chile and Australia Based on reviews the Program Committee selected 329 high quality papers for presentation at ISNN 2004 and publication in the proceedings The papers are organized into many topical sections under 11 major categories theoretical analysis learning and optimization support vector machines blind source separation independent component analysis and principal component analysis clustering and classification robotics and control telecommunications signal image and time series processing detection diagnostics and computer security biomedical applications and other applications covering the whole spectrum of the recent neural network research and development In addition to the numerous contributed papers 46 distinguished scholars were invited to give plenary speeches at ISNN 2004 ISNN 2004 was an inaugural event It brought together a few hundred researchers educators scientists and practitioners to the beautiful coastal city Dalian in northeastern China It provided an international forum for the participants to present new results to discuss the state of the art and to exchange information on emerging areas and future trends of neural network research It also created a nice opportunity for the participants to meet colleagues and make friends who share similar research interests *Applied Modeling of Hydrologic Time Series* Jose D. Principles of Neural Model Identification, Selection and Adequacy Achilleas Zapranis,Apostolos-Paul N. Refenes,2012-12-06 Neural networks have had considerable success in a variety of disciplines including engineering control and financial modelling However a major weakness is the lack of established procedures for testing mis specified models and the statistical significance of the various parameters which have been estimated This is particularly important in the majority of financial applications where the data generating processes are dominantly stochastic and only partially deterministic Based on the latest most significant developments in estimation theory model selection and the theory of mis specified models this volume develops neural networks into an advanced financial econometrics tool for non parametric modelling It provides the theoretical framework required and displays the efficient use of neural networks for modelling complex financial phenomena Unlike most other books in this area this one treats neural networks as statistical devices for non linear non parametric regression analysis

Encyclopedia of Coastal Science M. Schwartz,2006-11-08 Honorable Mention Award for Excellence in Scholarly and Professional Publishing Maurice Schwartz Editor of the much acclaimed Encyclopedia of Beaches and Coastal Environments Hutchinson Ross 1982 has now brought forth a new volume with a fresh interdisciplinary approach that includes geomorphology ecology engineering technology oceanography and human activities as they relate to coasts Within its covers the Encyclopedia of Coastal Science includes many aspects of the coastal sciences that are only to be found scattered among scientific literature Being broadly interdisciplinary in its treatment of coasts the Encyclopedia of Coastal Science features contributions by 245 well known international specialists in their respective fields and is abundantly illustrated with line drawings and photographs Not only does this volume offer an extensive number of entries it also includes various appendices an illustrated glossary of coastal geomorphology and extensive bibliographic listings This Encyclopedia thus provides a comprehensive reference work for students professionals as well as informed lay readers

Arma Model Identification Introduction

Free PDF Books and Manuals for Download: Unlocking Knowledge at Your Fingertips In today's fast-paced digital age, obtaining valuable knowledge has become easier than ever. Thanks to the internet, a vast array of books and manuals are now available for free download in PDF format. Whether you are a student, professional, or simply an avid reader, this treasure trove of downloadable resources offers a wealth of information, conveniently accessible anytime, anywhere. The advent of online libraries and platforms dedicated to sharing knowledge has revolutionized the way we consume information. No longer confined to physical libraries or bookstores, readers can now access an extensive collection of digital books and manuals with just a few clicks. These resources, available in PDF, Microsoft Word, and PowerPoint formats, cater to a wide range of interests, including literature, technology, science, history, and much more. One notable platform where you can explore and download free Arma Model Identification PDF books and manuals is the internet's largest free library. Hosted online, this catalog compiles a vast assortment of documents, making it a veritable goldmine of knowledge. With its easy-to-use website interface and customizable PDF generator, this platform offers a user-friendly experience, allowing individuals to effortlessly navigate and access the information they seek. The availability of free PDF books and manuals on this platform demonstrates its commitment to democratizing education and empowering individuals with the tools needed to succeed in their chosen fields. It allows anyone, regardless of their background or financial limitations, to expand their horizons and gain insights from experts in various disciplines. One of the most significant advantages of downloading PDF books and manuals lies in their portability. Unlike physical copies, digital books can be stored and carried on a single device, such as a tablet or smartphone, saving valuable space and weight. This convenience makes it possible for readers to have their entire library at their fingertips, whether they are commuting, traveling, or simply enjoying a lazy afternoon at home. Additionally, digital files are easily searchable, enabling readers to locate specific information within seconds. With a few keystrokes, users can search for keywords, topics, or phrases, making research and finding relevant information a breeze. This efficiency saves time and effort, streamlining the learning process and allowing individuals to focus on extracting the information they need. Furthermore, the availability of free PDF books and manuals fosters a culture of continuous learning. By removing financial barriers, more people can access educational resources and pursue lifelong learning, contributing to personal growth and professional development. This democratization of knowledge promotes intellectual curiosity and empowers

individuals to become lifelong learners, promoting progress and innovation in various fields. It is worth noting that while accessing free Arma Model Identification PDF books and manuals is convenient and cost-effective, it is vital to respect copyright laws and intellectual property rights. Platforms offering free downloads often operate within legal boundaries, ensuring that the materials they provide are either in the public domain or authorized for distribution. By adhering to copyright laws, users can enjoy the benefits of free access to knowledge while supporting the authors and publishers who make these resources available. In conclusion, the availability of Arma Model Identification free PDF books and manuals for download has revolutionized the way we access and consume knowledge. With just a few clicks, individuals can explore a vast collection of resources across different disciplines, all free of charge. This accessibility empowers individuals to become lifelong learners, contributing to personal growth, professional development, and the advancement of society as a whole. So why not unlock a world of knowledge today? Start exploring the vast sea of free PDF books and manuals waiting to be discovered right at your fingertips.

FAQs About Arma Model Identification Books

How do I know which eBook platform is the best for me? Finding the best eBook platform depends on your reading preferences and device compatibility. Research different platforms, read user reviews, and explore their features before making a choice. Are free eBooks of good quality? Yes, many reputable platforms offer high-quality free eBooks, including classics and public domain works. However, make sure to verify the source to ensure the eBook credibility. Can I read eBooks without an eReader? Absolutely! Most eBook platforms offer web-based readers or mobile apps that allow you to read eBooks on your computer, tablet, or smartphone. How do I avoid digital eye strain while reading eBooks? To prevent digital eye strain, take regular breaks, adjust the font size and background color, and ensure proper lighting while reading eBooks. What the advantage of interactive eBooks? Interactive eBooks incorporate multimedia elements, quizzes, and activities, enhancing the reader engagement and providing a more immersive learning experience. Arma Model Identification is one of the best book in our library for free trial. We provide copy of Arma Model Identification in digital format, so the resources that you find are reliable. There are also many Ebooks of related with Arma Model Identification. Where to download Arma Model Identification online for free? Are you looking for Arma Model Identification PDF? This is definitely going to save you time and cash in something you should think about.
