LOOKING THROUGH THE LENS Dr. Martin Roy Edward, 2024-05-06 This book Looking through the Lens Scientific Enrichment of our Children mainly deals with the methods of teaching science and the problems faced therein The greatest plight of our Science Education in the country is that since Independence we haven't been able to

produce any Noble Laureates We have highly talented youth population living in the rural India which needs to be uplifted The author strongly emphasizes that the teaching of science should be started right from the early years in childhood This can only be achieved by changing the methods of teaching right at the preprimary and the primary stages The teachers should be trained to see that the child s curiosity zest vitality and interest are maintained throughout the school life Our examination system also needs a revamp and this should be taken up seriously One of the greatest setbacks of our educational system is that our children are not able to apply the acquired knowledge to an unknown situation and solve a problem they face The author blames our examination system for it He further speaks about the importance of teaching English language in our country

The Power of Knowledge Jeremy Black,2014-01-14 Information is power For more than five hundred years the success or failure of nations has been determined by a country s ability to acquire knowledge and technical skill and transform them into strength and prosperity Leading historian Jeremy Black approaches global history from a distinctive perspective focusing on the relationship between information and society and demonstrating how the understanding and use of information have been the primary factors in the development and character of the modern age Black suggests that the West s ascension was a direct result of its institutions and social practices for acquiring employing and retaining information and the technology that was ultimately produced His cogent and well reasoned analysis looks at cartography and the hardware of communication armaments and sea power mercantilism and imperialism science and astronomy as well as bureaucracy and the management of information linking the history of technology with the history of global power while providing important indicators for the future of our world

Science and Scientists Salem Press,2006 Documents the major breakthroughs in science from ancient times to

the present with emphasis on the modern era [The Publishers Weekly](#) ,2001 [Reader's Guide to the History of Science](#)
 Arne Hessenbruch,2013-12-16 The Reader s Guide to the History of Science looks at the literature of science in some 550
 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central
 concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is
 reflected in the range of disciplines from which the international team of 200 contributors are drawn **Hermeneutic**
Realism Dimitri Ginev,2016-08-24 This study recapitulates basic developments in the tradition of hermeneutic and
 phenomenological studies of science It focuses on the ways in which scientific research is committed to the universe of
 interpretative phenomena It treats scientific research by addressing its characteristic hermeneutic situations and uses the
 following basic argument in this treatment By demonstrating that science s epistemological identity is not to be spelled out in
 terms of objectivism mathematical essentialism representationalism and foundationalism one undermines scientism without
 succumbing scientific research to procedures of normative democratic control that threaten science s cognitive autonomy
 The study shows that in contrast to social constructivism hermeneutic phenomenology of scientific research makes the case
 that overcoming scientism does not imply restrictive policies regarding the constitution of scientific objects **Scientific**
and Technical Aerospace Reports ,1993 [Oxford Figures](#) John Fauvel,Raymond Flood,Robin Wilson,2013-09-19 The
 mathematical tradition at Oxford is one of the oldest in Britain and Oxford scholars have been at the forefront of
 mathematical research for the past eight centuries This is the story of the intellectual and social life of this community and of
 its interactions with the wider world [Returning to Scientific Practice](#) Xu Zhu,Wu Tong,2019-05-17 This book is a result
 from a collective study on philosophy of scientific practice PSP which began around 2002 and still ongoing There is an
 apparently increasing interest in scientific practice influenced by the historicistic philosophy of science and the sociology of
 scientific knowledge SSK Prof WU Tong and his research group believe that it is necessary for PSP to turn from the theory
 dominant position to the practice dominance PSP has also put forward the possibility of reinterpreting the epistemic status of
 local knowledge in Chinese tradition which provides the most significant motivation to participate this study In this book we
 have selected three main cases namely Chinese medicine Fengshui and Ethnobotany to examine the effect of PSP The aim of
 our collective study is not merely on theoretical construction of PSP but also to consider the various applications of PSP
 especially for re interpreting and demonstrating the variety of local knowledge from traditional China which seems to be a
 genuine contribution to the international enterprise of philosophy of science particularly made by Chinese scholars
