The Literary and Cultural Reception of Charles Darwin in Europe Thomas F. Glick, Elinor Shaffer, 2014-05-22 Beyond his pivotal place in the history of scientific thought Charles Darwin's writings and his theory of evolution by natural selection have also had a profound impact on art and culture and continue to do so to this day *The Literary and Cultural Reception of Charles Darwin in Europe* is a comprehensive survey of this enduring cultural impact throughout the continent With chapters written by leading international scholars that explore how literary writers and popular culture responded to Darwin's thought the book also includes an extensive timeline of his cultural reception in Europe and bibliographies of major translations in each country

Glick, 1988-09-24 The majority of the chapters deal with the reception accorded Darwin's work in specific countries England the United States Germany France Russia the Netherlands Spain Mexico and the Arab countries Several chapters however also investigate the response to Darwinism made by specific social circles such as social scientists in Russia and the United States

Darwin's Metaphor Robert Maxwell Young, 1971

Darwin, Darwinism and Conservation in the Galapagos Islands Diego Quiroga, Ana Sevilla, 2016-10-03 The book explores how Darwin's legendary and mythologized visit to the Galapagos affected the socioecosystems of the Islands as well as the cultural and intellectual traditions of Ecuador and Latin America It highlights in what way the connection between Darwin and the Galapagos has had real enduring and paradoxical effects in the Archipelago This Twentieth Century construct of the Galapagos as the cradle of Darwin's theory and insights triggered not only the definition of the Galapagos as a living natural laboratory but also the production of a series of conservation practices and the reshaping of the Galapagos as a tourism destination with an increasingly important flow of tourists that potentially threaten its fragile ecosystems The book argues that the idea of a Darwinian living laboratory has been limited by the success

of the very same constructs that promote its conservation It suggests critical interpretations of this paradox by questioning many of the dichotomies that have been created to understand nature and its conservation We also explore some possible ways in which Darwin's ideas can be used to better understand the social and natural threats facing the Islands and to develop sustainable and successful management practices **Darwin's Roadmap to the Curriculum** David Sloan

Wilson, Glenn Geher, Hadassah Mativetsky, Andrew C. Gallup, 2019 This volume serves to integrate the vast literature in the interdisciplinary field of Evolutionary Studies EvoS providing clear examples of how evolutionary concepts relate to all facets of life It features chapters that outline a variety of applications to evolution education including improved sustainable development medical practices and creative and critical thinking skills Exploring controversies surrounding evolution education this volume provides a roadmap to asking and answering Darwinian questions across all areas of intellectual inquiry **The Literary Imagination from Erasmus Darwin to H.G. Wells** Michael R. Page, 2016-03-09

At the close of the eighteenth century Erasmus Darwin declared that he would enlist the imagination under the banner of science beginning Michael Page argues a literary narrative on questions of evolution ecology and technological progress that would extend from the Romantic through the Victorian periods Examining the interchange between emerging scientific ideas specifically evolution and ecology new technologies and literature in nineteenth century Britain Page shows how British writers from Darwin to H G Wells confronted the burgeoning expansion of scientific knowledge that was radically redefining human understanding and experience of the natural world of human species and of the self The wide range of authors covered in Page's ambitious study permits him to explore an impressive array of topics that include the role of the Romantic era in the molding of scientific and cultural perspectives the engagement of William Wordsworth and Percy Shelley with questions raised by contemporary science Mary Shelley's conflicted views on the unfolding prospects of modernity and how Victorian writers like Charles Kingsley Samuel Butler and W H Hudson responded to the implications of evolutionary theory Page concludes with the scientific romances of H G Wells to demonstrate how evolutionary fantasies reached the pinnacle of synthesis between evolutionary science and the imagination at the close of the century **Darwin's Biological Work** P. R.

Bell, 2011 This collection of essays demonstrates the width of Darwin's interests and ability as a biologist The theory of evolution by natural selection was of course his most important achievement and is covered in three of the essays Wilkie presents Darwin's theory in its historical setting and relates it to the earlier work by Buffon and Lamarck Haldane discusses the theory of evolution by natural selection as postulated by Darwin and assesses its validity in the light of subsequent research and Challinor considers the apparent discrepancy between some of the fossil evidence and Darwin's theory a problem which Darwin himself appreciated and discussed in *The Origin of Species* The other essays deal with subjects about which Darwin wrote separate books The essay by Bell is concerned with the movement of plants in response to light that by Marler with communication between animals and that by Whitehouse with cross and self fertilization in plants **Microbial**

genomics challenge Darwin Didier Raoult, Eugene V. Koonin, The 200th anniversary of Darwin's birthday was celebrated in 2009 making the concept of Darwinism even more popular than at the time it was originally proposed to the extent that it has acquired quasi religious status His theory revolves around a Tree of Life in which all living organisms are considered to have descended from a single ancestor and each node represents a common ancestor It comprises hierarchy and dichotomy which are typical characteristics of the post biblical 19th century vision Indeed according to post modern philosophy also called the French theory the majority of theories including scientific ones are based only on meta narratives expressing the influence of a culture at a given time Buddhism or Hinduism may have generated a very different story of evolution Our way of thinking about life and the way we describe evolution have changed radically in the 21st century due to the genomic revolution Comparative genome analyses have demonstrated that gene repertoires are characterized by plasticity and there is strong evidence that nearly all genes have been exchanged at some point Genomic data show that the genetic information of living organisms is inherited not only vertically but also laterally Lateral gene transfers were at first observed only in bacteria which contain genes originating from eukaryotes Archaea and viruses Such transfers were subsequently identified in all living organisms giant viruses have chimeric genomes and the human genome is a mosaic of genes with eukaryotic bacterial and viral origins We cannot identify a single common ancestor for the gene repertoire of any organism Furthermore a very high proportion of genes have been newly created through gene fusion or degradation and others show no homology to sequences found in other species It is now clear that every living organism has a variety of ancestors while exchanges between species are intense and the creation of new genes is frequent and permanent in all living organisms Our current genomic knowledge contradicts the tree of life theory as established by Darwin Recent analyses have produced bushes rather than resolved trees with the structure of some parts remaining elusive It becomes more and more obvious that phylogenetic relationships are better described by forests and networks and that species evolution looks more like a rhizome The chimerism and mosaic structure of all living organisms through both non vertical inheritance and de novo creation can only be assimilated and described by a post Darwinist concept In this Research Topic we wish to highlight the influence of microbiology and genomics on our understanding of the complexity of gene repertoires and also demonstrate how current knowledge does not support Darwin's theory Microbiology has offered a great advance in the way we perceive life Evidence obtained from studies on bacterial and viral evolution lateral inheritance phylogenetic trees and biodiversity continues to challenge what constituted until recently an unimpeded dogma in biology
