Abstract

We provide a strategy to restructure transaction processing systems. Such systems are core assets of most modern business operations, so their enhancement is crucial. Before large-scale renovation of transaction processing systems can take place, they need to be restructured. We argue that teleprocessing systems are unstructured by their nature. In this paper we approach the problems from a technical viewpoint and we report on the methods and tools that are necessary to bring structure in transaction systems. © 2002 Elsevier Science B.V. 1. Introduction

Many organizations have interactive business-critical applications in use for which it is important that they can be enhanced considerably. Change is not the exception for these systems, it is the norm [35]. Typical changes are migration to client/server, accessibility via Intranet/Internet, changed business needs, improving maintainability, to mention a few. In order to give an idea of the significance of this area: the majority of the code maintained in the world is a part of a transaction system and this trend will continue. Keeping such systems in good shape and allowing them to evolve is extremely important for developed society [35]. Many such applications have been
