McKeon,1998-03-28 Richard McKeon 1900 1985 taught philosophy at the University of Chicago from 1935 to 1973 and at the time of his death had published eleven books and 158 articles on an extraordinary array of topics and cultures This first volume of an ambitious three volume work covers philosophic theory through McKeon s writings on first philosophy metaphysics and the methods and principles of the sciences **The Cambridge Companion to Logical Empiricism** Alan Richardson,Thomas Uebel,2007-09-03 If there is a movement or school that epitomizes analytic philosophy in the middle of the twentieth century it is logical empiricism Logical empiricists created a scientifically and technically informed philosophy of science established mathematical logic as a topic in and tool for philosophy and initiated the project of formal semantics Accounts of analytic philosophy written in the middle of the twentieth century gave logical empiricism a central place in the project The second wave of interpretative accounts was constructed to show how philosophy should progress or had progressed beyond logical empiricism The essays survey the formative stages of logical empiricism in central Europe and its acculturation in North America discussing its main topics and achievements and failures in different areas of philosophy of science and assessing its influence on philosophy past present and future [The Oxford Encyclopedia of Philosophy, Science, and Technology in Islam](#) Salim Ayduz,2014 The main reference source for questions of Islamic philosophy science and technology amongst Western engaged readers and academics in general and legal researchers in particular [The Structure of Scientific Revolutions](#) Jo Hedesan,Joseph Tendler,2017-07-05 Thomas Kuhn s The Structure of Scientific Revolutions can be seen without exaggeration as a landmark text in intellectual history In his analysis of shifts in scientific thinking Kuhn questioned the prevailing view that science was an unbroken progression towards the truth Progress was actually made he argued via paradigm shifts meaning that evidence that existing scientific models are flawed slowly accumulates in the face at first of opposition and doubt until it finally results in a crisis that forces the development of a new model This development in turn produces a period of rapid change extraordinary science Kuhn terms it before an eventual return to normal science begins the process whereby the whole cycle eventually repeats itself This portrayal of science as the product of successive revolutions was the product of rigorous but imaginative critical thinking It was at odds with science s self image as a set of disciplines that constantly evolve and progress via the process of building on existing knowledge Kuhn s highly creative re imagining of that image has proved enduringly influential and is the direct product of the author s ability to produce a novel explanation for existing evidence and to redefine issues so as to see

them in new ways
