A bat pup is born. Mother bats usually have only one pup.

Pups spend time together in a nursery while their mothers are hunting.

Pups cling to their mother while she flies to roost. The pup cannot fly on its own until it is 2-3 months old.

A bat is an adult when it is around one year old.

Developing Charging Infrastructure and Technologies for Electric Vehicles Alam, Mohammad Saad,Pillai, Reji Kumar,Murugesan, N.,2021-12-31 The increase in air pollution and vehicular emissions has led to the development of the renewable energy based generation and electrification of transportation Further the electrification shift faces an enormous challenge due to limited driving range long charging time and high initial cost of deployment Firstly there has been a

discussion on renewable energy such as how wind power and solar power can be generated by wind turbines and photovoltaics respectively while these are intermittent in nature The combination of these renewable energy resources with available power generation system will make electric vehicle EV charging sustainable and viable after the payback period Recently there has also been a significant discussion focused on various EV charging types and the level of power for charging to minimize the charging time By focusing on both sustainable and renewable energy as well as charging infrastructures and technologies the future for EV can be explored Developing Charging Infrastructure and Technologies for Electric Vehicles reviews and discusses the state of the art in electric vehicle charging technologies their applications economic environmental and social impact and integration with renewable energy This book captures the state of the art in electric vehicle charging infrastructure deployment their applications architectures and relevant technologies In addition this book identifies potential research directions and technologies that facilitate insights on EV charging in various charging places such as smart home charging parking EV charging and charging stations This book will be essential for power system architects mechanics electrical engineers practitioners developers practitioners researchers academicians and students interested in the problems and solutions to the state of the art status of electric vehicles *Urban Bats* Lauren

Moretto,Joanna L. Coleman,Christina M. Davy,M. Brock Fenton,Carmi Korine,Krista J Patriquin,2023-01-02 The Anthropocene is the age of human influence an epoch well known for its urban impact More than half of all people already live in cities and this proportion is expected to rise to almost 70 percent by 2050 Like other species in urban areas bats must contend with the pressures of profound and irreversible land cover change and overcome certain unique challenges such as the high density of roads lights glass and free ranging domestic animals Research on urban bats in recent decades indicates that when it comes to urban life some bats are synanthropes In other words although most species of bats are negatively impacted by urbanisation many appear to not only succeed but also thrive in cities and towns This observation has inspired interesting questions about bats in relation to urbanisation Which traits and behaviours equip bats for urban success What features of urban areas increase the likelihood that bats will successfully persist there or even colonize new areas And how does the success of urban bats affect co habiting humans Our book explores the interactions between bats and urban environments through case studies and reviews Understanding how different species interact with urban environments can reveal potential opportunities to mitigate urban threats to bats and threats posed by bats to other urban organisms including humans With this book we thus aspire to provide a knowledge base to help guide current and future efforts to conserve bats
