and the Neurosciences Sigrid Weigel, Gerhard Scharbert, 2015-08-03 The book presents an overview of the term neuropsychanalysis and traces its historical and scientific foundations as well as its cultural implications It also turns its attention to some blind spots open questions and to what the future may hold It examines the cooperative and conflicted relationship between psychoanalysis and neuroscience Articles from different fields investigate the neurological basis of psychoanalysis as well as the psychological terms of neurology They also discuss what psychoanalysis has to offer neuroscience In addition the emerging neuro psychoanalytical dialogue is enriched here by the voice of a culturally informed history of science The book brings leading authorities on these topics into conversation with each other creating an unprecedented opportunity to better understand the language of the psyche Specific concerns include the discussion of corporeality how the body figures into psychoanalysis the meaning of the unconscious in connection with dreams unconscious fantasies and the field of epigenetics Following a historical perspective the book provides a re reading of Freud s drive theory exploring his concept of life at the threshold of science and culture as well as the relationship between various representations somatic states and the origin of drive Overall the book argues that if the different methodological approaches of psychoanalysis and neuroscience are acknowledged not only for their individual uniqueness but also as a dialectic then the resulting epistemological and methodological dialogue might open up a fascinating body of neuropsychanalytical knowledge

The Carousel of Time Bernard Ancori, 2020-01-02 Based around the image of a carousel this book uses epistemological theory to tackle the paradoxical acceleration and deceleration of time that is experienced by many The consequence of this paradox is the observance of the past present and future coinciding where acceleration is combined with perfect immobility The Carousel of Time proposes a model that focuses on a complex network of individual actors and their relation to the analysis structure and evolution of our socio cognitive space time The first part of the book Foundations presents the key bases of this model as well as the notions that must be understood and integrated The book then analyzes the concept of Space defining the parameters of the network s boundaries and finishes with an exploration of Time This third part links the temporality of the network to its spatial characteristics and studies its evolution

Class, Trauma, Identity Giorgos Bithymitris, 2023-04-14 This book is a dialectic and multi perspective examination of classed traumas in late modernity The primary anchoring question is whether and how class becomes a condition of possibility for coping with traumas What does it mean to experience deindustrialization crises or domestic violence from a specific class position Do the coping mechanisms differ along the lines of class gender race age or ethnicity The text negotiates such questions travelling back and forth from psychoanalysis to sociology and from the global to the local while critically engaging with memories narratives and myths engraved into social and personal histories Through a dialogic quest for what is silenced and what is salient within oral written and visual testimonies it foregrounds what the upper classes prefer to neglect the traumatizing core of the new class divide Rather than idealizing or vilifying the dominated this study calls for an exploration of practices narrations and spaces

whereby alienation and integration co exist antagonistically producing hybrid and fragmented but also potentially transformative subjectivities This book will be of interest to scholars of humanities and social sciences primarily for those studying social stratification and inequalities sociology of emotions identity theory trauma and memory political psychoanalysis labour history and ethnography **Frontiers in psychodynamic neuroscience** Filippo Cieri,Robin Carhart-Harris,Christoph Mathys,Oliver Hugh Turnbull,Mark Leonard Solms,2023-04-19 **Psychosurgery** Marc Lévêque,2014-02-18 Psychosurgery or the surgical treatment of mental disorders has enjoyed a spectacular revival over the past ten years as new brain stimulation techniques have become available Neuromodulation offers new possibilities for the treatment of psychiatric disorders such as depression obsessive compulsive disorder OCD addiction eating disorders and autism This work presents the history of this unique specialty and investigates current techniques and ethical challenges With a wealth of illustrations and detailed anatomical diagrams it provides essential information for medical practitioners as well as anyone else interested in the fascinating advances being made in neuroscience today I like the book as it provides a very nice overview of psycho surgery in general It is easy to understand for any para medical practitioner but even specialists in the field may learn new things They may also enjoy looking the well known and less known figures which illustrate the book Professor Bart Nuttin Reading this book is like reading an anthology or rather an encyclopaedia of the field of psychiatric surgery spanning more than a century This is a work with an unprecedented degree of erudition and knowledge and the subject is presented in a didactic scholar and scientific manner and is extensively referenced and illustrated If only one book is to be read by anybody interested in this field regardless of specialty this is The Book to read Professor Marwan Hariz *The Pleasure of Thinking* Tania Zittoun,2023-10-19 Tania Zittoun demonstrates that there is pleasure in thinking and that the pleasure of thinking plays a key role in our lives in the development of children in learning in adult life and in ageing Drawing on arts and philosophy exploring research in developmental psychology cultural psychology and psychoanalysis it highlights five modalities of thinking curiosity the functional pleasure of pursuing a task the pleasure of discovery the dialogical pleasure of thinking with others and a meta pleasure This book proposes a unique integrative model of thinking conceived as a situated activity following trajectories that combine modalities of pleasure Evolving with time the pleasure of thinking can take place as we reason make sense or daydream at school at work when we garden or do science Academics and graduate students in sociocultural critical developmental and cognitive psychology will benefit from The Pleasure of Thinking Handbook of Computational Neurodegeneration Panagiotis Vlamos,Ilias S. Kotsireas,Ioannis Tarnanas,2023-07-25 The Handbook of Computational Neurodegeneration provides a comprehensive overview of the field and thus bridges the gap between standard textbooks of research on neurodegeneration and dispersed publications for specialists that have a narrowed focus on computational methods to study this complicated process The handbook reviews the central issues and methodological approaches related to the field for which the reader pursues a thorough overview It

also conveys more advanced knowledge thus serving both as an introductory text and as a starting point for an in depth study of a specific area as well as a quick reference source for the expert by reflecting the state of the art and future prospects The book includes topics that are usually missing in standard textbooks and that are only marginally represented in the specific literature The broad scope of this handbook is reflected by five major parts that facilitate an integration of computational concepts methods and applications in the study of neurodegeneration Each part is intended to stand on its own giving an overview of the topic and the most important problems and approaches which are supported by examples practical applications and proposed methodologies The basic concepts and knowledge standard procedures and methods are presented as well as recent advances and new perspectives
