*Living Electronic Music* Simon Emmerson, 2007

Drawing on recent ideas that explore new environments and the changing situations of composition and performance Simon Emmerson provides a significant contribution to the study of contemporary music bridging history aesthetics and the ideas behind evolving performance practices Whether created in a studio or performed on stage how does electronic music reflect what is live and living What is it to perform live in the age of the laptop Many performer composers draw upon a library of materials but others refuse to abandon traditionally created and structured electroacoustic work Lying behind this maelstrom of activity is the perennial relationship to theory that is ideas principles and practices that somehow lie behind composers and performers actions The relationship of the body performing to the spaces around has also undergone a revolution as the source of sound production has shifted to the loudspeaker Emmerson considers these issues in the framework of our increasingly acousmatic world in which we cannot see the source of the sounds we hear

Cataloging Policy and Support Office,2009 [Handbook of Research on Computational Arts and Creative Informatics](#) Braman, James,Vincenti, Giovanni,Trajkovski, Goran,2009-05-31 This book looks at the combination of art creativity and expression through the use and combination of computer science and how technology can be used creatively for self expression using different approaches Provided by publisher [The Arts of the Grid](#) Liora Bigon,Nava Shaked,2021-10-04 This is the first collection of interdisciplinary scholarship to expand on gridded modalities with a strong affinity to the arts It seeks to inspire new avenues of research by exploring a horizon of gridded relationships among humans between humans and the environment and between human and non human actors By bringing together philosophical themes and applied practices the volume traces a genealogy of the grid as an exercise in grasping its inherent complexity and incomplete quality A collective effort by a group of researchers practitioners and designers it promotes an understanding of gridded modalities as complex networks that interact with other networks generating new meanings and reflecting changes in thought [The Routledge Research Companion to Electronic Music: Reaching out with Technology](#) Simon Emmerson,2018-05-16 The theme of this Research Companion is connectivity and the global reach of electroacoustic music and sonic arts made with technology The possible scope of such a companion in the field of electronic music has changed radically over the last 30 years The definitions of the field itself are now broader there is no clear boundary between electronic music and sound art Also what was previously an apparently simple divide between art and popular practices is now not easy or helpful to make and there is a rich cluster of streams of practice with many histories including world music traditions This leads in turn to a steady undermining of a primarily Euro American enterprise in the second half of the twentieth century Telecommunications technology most importantly the development of the internet in the final years of the century has made materials practices and experiences ubiquitous and apparently universally available though some contributions to this volume reassert the influence and importance of local cultural practice Research in this field is now increasingly multi disciplinary Technological developments are embedded in practices which may be musical social individual and collective The contributors to this companion embrace technological scientific aesthetic historical and social approaches and a host of hybrids but most importantly they try to show how these join up Thus the intention has been to allow a wide variety of new practices to have voice unified through ideas of reaching out and connecting together and in effect showing that there is emerging a different kind of global music [Digital Encounters](#) Cecily Raynor,Rhian Lewis,2023-03-30 To understand the creative fabric of digital networks scholars of literary and cultural studies must turn their attention to crowdsourced forms of production discussion and distribution Digital Encounters explores the influence of an increasingly networked world on contemporary Latin American cultural production

Drawing on a spectrum of case studies the contributors to this volume examine literature art and political activism as they dialogue with programming languages social media platforms online publishing and geospatial metadata Implicit within these connections are questions of power privilege and stratification The book critically examines issues of inequitable access and data privacy technology s capacity to divide people from one another and the digital space as a site of racialized and gendered violence Through an expansive approach to the study of connectivity Digital Encounters illustrates how new connections between analog and digital human and machine print text and pixel alter representations of self Other and world
