Biologically Inspired Approaches for Locomotion, Anomaly Detection and Reconfiguration for Walking Robots Bojan Jakimovski, 2011-08-20 The increasing presence of mobile robots in our everyday lives introduces the requirements for their intelligent and autonomous features Therefore the next generation of mobile robots should be more self capable in respect to increasing of their functionality in unforeseen situations decreasing of the human involvement in their everyday operations and their maintenance being robust fault tolerant and reliable in their operation Although mobile robotic systems have been a topic of research for decades and aside the technology improvements nowadays the subject on how to program and making them more autonomous in their operations is still an open field for research Applying bio inspired organic approaches in robotics domain is one of the methodologies that are considered that would help on making the robots more autonomous and self capable i.e. having properties such as self reconfiguration self adaptation self optimization etc In this book several novel biologically inspired approaches for walking robots multi legged and humanoid domain are introduced and elaborated They are related to self organized and self stabilized robot walking anomaly detection within robot systems using self adaptation and mitigating the faulty robot conditions by self reconfiguration of a multi legged walking robot The approaches presented have been practically evaluated

in various test scenarios the results from the experiments are discussed in details and their practical usefulness is validated

Future Robots Domenico Parisi, 2014-06-15 This book is for both robot builders and scientists who study human behaviour and human societies Scientists do not only collect empirical data but they also formulate theories to explain the data Theories of human behaviour and human societies are traditionally expressed in words but today with the advent of the computer they can also be expressed by constructing computer based artefacts If the artefacts do what human beings do the theory blueprint that has been used to construct the artefacts explains human behaviour and human societies Since human beings are primarily bodies the artefacts must be robots and human robots must progressively reproduce all we know about human beings and their societies And although they are purely scientific tools they can have one very important practical application helping human beings to better understand the many difficult problems they face today and will face in the future and perhaps to find solutions for these problems Interactive Collaborative Robotics Andrey Ronzhin, Jesus Savage, Roman Meshcheryakov, 2024-09-03 This book constitutes the refereed proceedings of the 9th International Conference on Interactive Collaborative Robotics ICR 2024 held in Mexico City Mexico during October 14 18 2024 The 32 full papers presented here were carefully reviewed and selected from 62 submissions These papers focus on the challenges trends and applications of Human Robot collaboration in various domains such as Industry Healthcare Society and Education **Build Your Own Award-Winning Robot** Pasquale De Marco, 2025-04-09 From the factory floor to the operating room robots are playing an increasingly important role in our lives But what exactly is a robot and how do they work In this comprehensive guide to robotics you ll learn everything you need to know about these fascinating machines We ll explore the different types of robots how they re built and how they re programmed We ll also discuss the history of robotics and the ethical issues that arise from their use Whether you re a student a hobbyist or simply someone who s curious about robots this book is for you With clear explanations and engaging examples we ll take you on a journey through the world of robotics from the basics to the cutting edge In this book you ll learn about The different types of robots and their applications The principles of robot design and construction How to program robots using a variety of programming languages The ethical issues surrounding the use of robots The future of robotics and the potential impact of robots on society So dive into the world of robotics today and discover the incredible potential of these amazing machines If you like this book write a review *Simulation, Modeling, and Programming for Autonomous Robots* Stefano Carpin, Itsuki Noda, Enrico Pagello, Monica Reggiani, 2008-10-23 This book constitutes the refereed proceedings of the First International Conference on Simulation Modeling and Programming for Autonomous Robots SIMPAR 2008 held in Venice Italy in November 2008 The 29 revised full papers and 21 revised poster papers presented were carefully reviewed and selected from 42 submissions The papers address all current issues of robotics applications and simulation environments thereof such as 3D robot simulation reliability scalability and validation of robot simulation simulated sensors and actuators offline simulation of robot design online simulation with real time constraints
