world's oldest models to Z for Zoom on the photography of models Unbound by the practicalities of life size construction models allow architects the flexibility and freedom to think in three dimensions Whether made for purely speculative exercises or to solve a specific problem they are aids to the imagination Equally they can be used as detailed and accurate representations of particular places either built or as yet unrealized in order to convey information to patrons or the public Models can be made in a wide variety of media from paper cork and wood to such ephemeral materials as sugar and jelly Most recently the advent of digital technologies has transformed possibilities for prototyping which in turn has greatly influenced architectural design Models also have a vibrant life beyond the design process Souvenir models collected on the Grand Tour 1:1 scale plaster models of architectural fragments displayed in museums and architectural toys that have delighted children and adults alike are just some of their manifestations outside the architect's office Written by architects model makers curators conservators and scholars the texts in this absorbing Alphabet explore such varied but fundamental issues as modelling materials and techniques scale and the role of the model in the design process They also go beyond conventional accounts to look at models under the X ray machine their use in film and edible models The result is a wide ranging insightful and original account of the multiple lives of the architectural model

The Architectural Model Matthew Mindrup, 2019-10-08 An investigation of different uses for the architectural model through history as sign souvenir funerary object didactic tool medium for design and architect's muse For more than five hundred years architects have employed three dimensional models as tools to test refine and illustrate their ideas But as Matthew Mindrup shows the uses of physical architectural models extend beyond mere representation An architectural model can also simulate instruct inspire and generate architectural designs It can be among other things sign souvenir toy funerary object didactic tool medium or muse In this book Mindrup surveys the history of architectural models by investigating their uses both theoretical and practical Tracing the architectural model's development from antiquity to the present Mindrup also offers an interpretive framework for understanding each of its applications in the context of time and place He first examines models meant to portray extant fantastic or proposed structures describing their use in ancient funerary or dedicatory practices in which models are endowed with magical power as a medium for architectural reverie and inspiration and as prototypes for twentieth century experimental designs Mindrup then considers models that exemplify certain architectural uses exploring the influence of Leon Battista Alberti's dictum that models be simple lest they distract from the architect's ideas analyzing the model as a generative tool and investigating allegorical analogical and anagogical interpretations of models Mindrup's histories show how the model can be a surrogate for the architectural structure itself or for the experience of its formal tactile and sensory complexity and beyond that that the manipulation play experimentation and dreaming enabled by models allow us to imagine architecture in new ways

Architectural Model as Machine Albert Smith, 2007-03-30 This book offers an explanation of why scale models are important to the design process Albert Smith takes the reader through the history and significance of

models in architecture from the magic of the Egyptian scale model to the present day Through this description of the relationship between architecture and the scale model Smith demonstrates the most effective process between concept and machine between the idea and the final building The great value of this book is to reveal the nature of the scale model and to unlock the tremendous potential of this design tool as a thinking and communicative advice His chronological analysis goes on from Egypt through Rome to the relationship between the Greek paradigm scale model and then on to Medieval and Renaissance models It concludes with the models of the Spanish architect Antonio Gaudi the Russian Constructivists the American architect Louis Khan and finally looks at the role of scale models in the present day through the work of the Polish American architect Daniel Libeskind and the American Frank Gehry The Routledge Companion to Architectural Drawings and Models Federica Goffi, 2022-05-30 Architectural drawings and models are instruments of imagination communication and historical continuity The role of drawings and models and their ownership placement and authorship in a ubiquitous digital age deserve careful consideration Expanding on the well established discussion of the translation from drawings to buildings this book fills a lacuna in current scholarship questioning the significance of the lives of drawings and models after construction Including emerging well known and world renowned scholars in the fields of architectural history and theory and curatorial practices the thirty five contributions define recent research in four key areas drawing sites sites of knowledge construction drawing office construction site the afterlife of drawings and models archiving collecting displaying and exhibiting tools of making architectural representations and their apparatus over time and the ethical responsibilities of collecting and archiving authorship ownership copyrights and rights to copy The research covers a wide range of geographies and delves into the practices of such architects as Sir John Soane Superstudio Eug ne Emmanuel Viollet le Duc Frank Lloyd Wright Wajiro Kon Germ n Samper Gnecco A PS Mies van der Rohe and Renzo Piano Architecture's Model Environments Lisa Moffitt, 2023-02-20 Seen through the distilling lens of the architectural model Architecture's Model Environments is a novel and far reaching exploration of the many dialogues buildings have with their environmental surroundings Expanding on histories of building technology the book sheds new light on how physical models conventionally understood as engineering experimentation devices enable architectural design speculation The book begins with a catalogue of ten original model prototypes of wind tunnels water tables and filling boxes and is the first of its kind to establish an architectural approach to fabricating such environmental models Subsequent chapters feature three precedent models that have been largely overlooked within the wider oeuvres of their authors French polymath tienne Jules Marey s 1900 2 wind tunnels Hungarian American architects Victor and Alad r Olgyay s 1955 63 thermoheliodon and Scottish chemist and building ventilation expert David Boswell The Ventilator Reid s 1844 test tube convection experiments Moving between historic moments and the present day between case studies and original prototypes the book reveals the potent ability for models as both physical artefacts and mental ideals to reflect prevailing cultural views about the world and to even reshape

those views Fundamentally Architecture s Model Environments illustrates how environmental models reveal design insights across scales from the seam that leaks to the body that feels to the building that mediates to the world that immerses

The Architectural Model as Art George Andrew Barker,1972 *Virtual Architecture: Modeling and Creation of Real-Time 3D Interactive Worlds* Mohd Fairuz Shiratuddin,Kevin Kitchens,Desmond Fletcher,2008-12-30 This book was written to support the development of art assets and virtual environments for Serious Games and Architectural Visualization It caters to those who do not have any experience with 3D modeling texturing and scene building in a real time virtual environment This book focuses on utilizing Autodesk s 3DS Max as the 3D modeling tool Allegorithmic s MapZone as the texture creation tool and Terathon s C4 Engine as the real time virtual environment scene builder Many of the chapters in this book were written independent of one another to allow students to explore and use their creativity and imagination in creating their own virtual environments Great Models Suzanne Buttolph,1978 *A History of Architectural Modelmaking in Britain* David Lund,2022-12-16 Architectural modelmakers have long carried out their work hidden behind the scenes of architectural design and in presenting a history of architectural modelmaking in Britain for the first time this book casts a new light on their remarkable skills and achievements By telling the story of the modelmakers who make architectural models rather than architects who commission and use them this book seeks to celebrate their often overlooked contribution to the success and endurance of the architectural model in Britain over the past one hundred and forty years Drawing from extensive archival research and interviews with practicing and retired modelmakers this book traces the complete history of architectural modelmaking in Britain from its initial emergence as a specialist occupation at the end of the nineteenth century through to the present day It reveals the legacy of John Thorp the first professional architectural modelmaker in Britain who opened his business in London in 1883 and charts the lives and careers of the innovative and creative modelmakers who followed him It examines the continually evolving materials tools and processes of architectural modelmaking and outlines the profound ideological economic and technological influences that have shaped the profession s development Illustrated with over one hundred photographs of architectural models from previously undocumented archives this book will be of great interest to architectural modelmakers academics and historians as well as anyone with an interest in architectural history and modelmaking **The Imperfect City: On Architectural Judgment** Samir Younes,2016-03-03 If architectural judgment were a city a city of ideas and forms then it is a very imperfect city When architects judge the success or failure of a building the range of ways and criteria which can be used for this evaluation causes many contentious and discordant arguments Proposing that the increase in number and intensity of such arguments threatens to destabilize the very grounds upon which judgment is supposed to rest this book examines architectural judgment in its historical cultural political and psychological dimensions and their convergence on that most expressive part of architecture namely architectural character It stresses the value of reasoned judgment in justifying architectural form a judgment based on three

sets of criteria those criteria that are external to architecture those that are internal to architecture and those that pertain to the psychology of the architect as image maker External criteria include philosophies of history or theories of modernity internal criteria include architectural character and architectural composition while the psychological criteria pertain to mimetic rivalry or rivaling desires for the same architectural forms Yet although architectural conflicts can adversely influence judgment they can at the same time contribute to the advancement of architectural culture
