The Earth That Modernism Built Kenny Cupers, 2024-11-26. An intellectual history of architectural modernism for an age of rising global inequality and environmental crisis. *The Earth That Modernism Built* traces the rise of planetary design to an imperialist discourse about the influence of the earthly environment on humanity. Kenny Cupers argues that to understand how the earth became an object of design, we need to radically shift the

terms of analysis Rather than describing how new design ideas and practices traveled and transformed people and places across the globe this book interrogates the politics of life and earth underpinning this process It demonstrates how approaches to modern housing landscape design and infrastructure planning are indebted to an understanding of planetary and human ecology fueled by settler colonialism and imperial ambition Cupers draws from both canonical and unknown sources and archives in Germany Namibia and Poland to situate Wilhelmine and Weimar design projects in an expansive discourse about the relationship between soil settlement and race This reframing reveals connections between colonial officials planning agricultural hinterlands garden designers proselytizing geopolitical theory soil researchers turning to folklore and Bauhaus architects designing modern communities according to functionalist principles Ultimately The Earth That Modernism Built shows how the conviction that we can design our way out of environmental crisis is bound to exploitative and divisive ways of inhabiting the earth

Dreamers, Visionaries, and Revolutionaries in the Life Sciences Oren Harman, Michael R. Dietrich, 2018-07-20 What are the conditions that foster true novelty and allow visionaries to set their eyes on unknown horizons What have been the challenges that have spawned new innovations and how have they shaped modern biology In Dreamers Visionaries and Revolutionaries in the Life Sciences editors Oren Harman and Michael R. Dietrich explore these questions through the lives of eighteen exemplary biologists who had grand and often radical ideas that went far beyond the run of the mill science of their peers From the Frenchman Jean Baptiste Lamarck who coined the word biology in the early nineteenth century to the American James Lovelock for whom the Earth is a living breathing organism these dreamers innovated in ways that forced their contemporaries to reexamine comfortable truths With this collection readers will follow Jane Goodall into the hidden world of apes in African jungles and Francis Crick as he attacks the problem of consciousness Join Mary Lasker on her campaign to conquer cancer and follow geneticist George Church as he dreams of bringing back woolly mammoths and Neanderthals In these lives and the many others featured in these pages we discover visions that were sometimes fantastical quixotic and even threatening and destabilizing but always a challenge to the status quo

Avant-Garde World Creation Abigail van Alst, 2025-10-30 This book explores the widespread fascination with world creation among early twentieth century artists and examines those trends within the European avant garde The book reflects on what the world looks and feels like before and after World War One and thus also concerns creativity and destruction alike in the context of modernity Over the course of three chapters the author focusses on works in which avant garde artists combine and experiment with various arts and media to create alternative narratives of the world's creation These works include three canonized total works of art Der Weltbaumeister The World's Master Builder 1920 an illustrated book imagined as an architectural play by the Expressionist architect Bruno Taut the Futurist opera C Victory Over the Sun 1913 by Aleksei Kruchenykh Velimir Khlebnikov Kazimir Malevich and Mikhail Matiushin and the Cubist ballet La Cr ation du monde The Creation of the World 1923 by Blaise Cendrars Fernand L ger Darius Milhaud and Jean B rlin Providing new

readings of these classic works that dive deeply into the avant garde's inter artistic search for new modes of mediation as well as its dialogue with science politics and technology Abigaël van Alst demonstrates how each of these artworks staged a cosmogony an alternative story of the universe's creation which simultaneously experimentally and critically recounted the story of modernity This new book is ideal for researchers and scholars in History of Art Modernism and Comparative Literature

Picturing Evolution and Extinction Fae Brauer, 2015-10-05 With the increasing loss of biological diversity in this Sixth Age of Mass Extinction it is timely to show that devolutionary paranoia is not new but rather stretches back to the time of Charles Darwin It is also an opportune moment to show how human driven extinction as designated by the term Anthropocene has long been acknowledged The halcyon days of European industrial progress colonial expansion and scientific revolution trumpeted from the Great Exhibition of 1851 until the Dresden International Hygiene Exhibition of 1930 were constantly marred by fears of rampant degeneration depopulation national decline environmental devastation and racial extinction This is demonstrated by the discourses of catastrophism charted in this book that percolated across Europe in response to the theories of Darwin and Jean Baptiste Lamarck as well as Marcellin Berthelot Camille Flammarion Ernst Haeckel Louis Landouzy Félix Le Dantec Cesare Lombroso Thomas Huxley Benjamin Augustin Morel Louis Pasteur Léon Reclus Rudolf Steiner and Wilhelm Wundt among others This book presents pioneering explorations of the interrelationship between these discourses and modern visual cultures and the ways in which the picturing of evolution and extinction by artists as diverse as Roger Broders Albert Besnard Fernand Cormon Hélène Dufau mile Gall František Kupka Pablo Picasso Carles Mani y Roig Sophie Taeuber and Vasili Vatagin betrayed anxieties subliminally festering over degeneration alongside latent hopes of regeneration Following Darwin's concept of evolution as Janus faced the dialectical interplay of evolution and extinction and degeneration and regeneration is explored in modern visual cultures in Australia America Britain France Germany Russia Spain and Switzerland at significant spatio temporal junctures between 1860 and 1930 By unravelling the picturing of the dread of alcoholism cholera dysentery tuberculosis typhoid and rabies alongside phobias of animalism criminality hysteria impotency and ecological disaster each chapter makes an original contribution to this new field of scholarship By locating these discourses and visual cultures within the golden age of Neo Lamarckism they also reveal how regeneration was pictured as the Janus face of degeneration able to facilitate evolution through the inheritance of beneficial characteristics in propitious environments In striking such an uplifting note amidst the dissonant cacophony of catastrophism this book reveals why the

art and science of Transformism proved so appealing in France as elsewhere and why visual cultures of regeneration became as dominant in the twentieth century as the picturing of degeneration had been in the nineteenth century It also illuminates the paradoxical inversion that occurred in the twentieth century when devolution became equivalent to evolution for many Modernists Hence whilst this book opens with the picturing of indigenous people in Australia and North America as doomed races by the first publication of Darwin's *On The Origin of Species* it closes with the quest by 1930 for a regenerative suntan as dark as the skin of those indigenous people
