Basic Equine Nutrition And Its Physiological Functions:

Basic Equine Nutrition and Its Physiological Functions Kent N. Thompson, 1997 *Equine Applied and Clinical Nutrition* Raymond J. Geor, Patricia Harris, Manfred Coenen, 2013-01-31 *Equine Applied and Clinical Nutrition* is a comprehensive text resource on the nutrition and feeding management of horses. Over 20 experts from around the world share their wisdom on a topic of central relevance to all equine practitioners and the equine community generally. Both basic and applied, including healthy and diseased animals, nutrition and feeding management of horses and other equids (i.e., ponies, donkeys, wild equids) are covered. The book will appeal to a wide audience: undergraduate and postgraduate students in equine science and veterinary medicine, veterinarians, equine nutritionists, horse trainers, and owners. The clinical component will strengthen the appeal for equine veterinarians. *Equine Applied and Clinical Nutrition* will be a must-have for anyone involved in the care of horses, ponies, and other equids. The book is divided into 3 parts: Basic or core nutrition in this context refers to digestive physiology of the horse and the principles of nutrition; Applied nutrition deals with the particular types of foods and how to maintain an optimum diet through various life stages of the horse; You might characterize this aspect as prevention of disease through diet. Clinical nutrition covers various diseases induced by poor diet and their dietary treatment and management. It also looks at specific feeding regimes useful in cases of disease not specifically induced by diet. Authoritative international contributions. Strong coverage of clinical aspects either omitted from or only sparsely dealt with elsewhere. Full colour throughout. The only clinical equine nutrition book. *Equine Podiatry - E-Book* Andrea Floyd, Richard Mansmann, 2007-05-16 This comprehensive text not only covers basic principles of horseshoeing but also focuses on medical and surgical foot care management. Starting with the anatomy and physiology of the equine foot, this one-of-a-kind book then evaluates the foot, its pathological conditions including structural, developmental, and traumatic conditions, in addition to laminitis, balancing, and shoeing the healthy and diseased equine hoof, and ends with a chapter on new directions in equine podiatry written by cutting-edge researchers in the field. Written by and for both veterinarians and farriers, this book makes it easier for veterinarians and farriers to collaborate on the proper care and shoeing of the horse's foot. Text is devoted entirely to equine podiatry with 70 percent to 80 percent of lameness problems involving the foot. This comprehensive discussion is invaluable to the equine practitioner. Highly respected and qualified authors from all over the world provide expert information along with a chapter on the future of equine podiatry. Beautiful 4-color design and art program gives the reader helpful visual aids that clarify explanations in the text. *Evidence Based Equine Nutrition* Teresa Hollands, Lizzie Drury, 2023-09-30 This book uniquely provides both the scientific basis of equine nutrition and the translation of that science into practical day-to-day feeding advice. It summarises the latest research to provide readers with the evidence base needed to both confidently advise those who want to understand the science behind equine nutrition and apply that evidence into practical advice for anyone who just wants to know how to feed horses. Both veterinary and animal science courses struggle

to provide adequate nutrition training within their syllabuses Much of the general information available is poorly explained and not evidence based This book fills that gap with the author team relaying over 50 cumulative years experience teaching equine nutrition to both practising clinicians and students A recommended resource to support the teaching of veterinary nutrition this book should also be found on the bookshelf of all veterinarians animal scientists trainers nutritionists and nutritional advisors
