Basic Human Embryology:

Basic human embryology Peter L. Williams, 1969 **Basic Human Embryology** Colin Peter Wendell Smith, Peter Llewellyn Williams, Sylvia Treadgold, 1984 *Fundamentals of Human Embryology* John Allan, Beverley Kramer, 2010-10-01

The *Fundamentals of Human Embryology* covers embryonic development with a unique focus on adult anatomy. Its goal is to impart to students a comprehensive overview of how the human embryo forms not only as a basis for the student of human anatomy but also as a link to abnormalities they may encounter in their clinical careers. Extensively illustrated with labeled line drawings now enlarged for better visibility, this concise manual will meet the needs of both undergraduate and postgraduate students in the Human Sciences. Special features include separate chapters on the neural crest, the skull and osteogenesis, in-depth coverage of head and neck embryology including the development of the tooth for students of dentistry and speech and audiology. In this Second Edition of the manual, at the request of students and teachers, the authors have made the following changes: increased the size of the diagrams; revised the text to comply with the Federative International Committee on Anatomical Terminology changes to the *Terminologia Embryologica*; altered the sequencing of some topics to allow the development to flow more logically; included an appendix of coloured photographs of congenital abnormalities to help students form a more realistic idea of developmental abnormalities.

Ethics and Law in Biological Research Cosimo Marco Mazzoni, 2002-04-11 Scientific research on biotechnologies has become the protagonist of discoveries that exert a formidable impact on public opinion Every day popular opinion is challenged by the media so that it becomes not only a witness of these developments but is also to a certain extent forced to become a judge of those cases where human and animal genetics have been investigated over the last decades The man in the street is thus confronted by moral positions ranging from cautious approval to wait and see attitudes to unconditional condemnation On the other hand scientists are involved in the ethical evaluation of the results of their own research However the results of scientific pursuits are capable of producing immediate effects on the daily life of every human being Consequently alongside the scientists people feel strongly about their need and their right to contribute to an accurate assessment of the effects of science on society This is a collection of essays reflecting a considerable range of different cultural experiences and different ethical underpinnings The main subject is cloning Cloning is the most accessible and most readily perceived point of convergence from which ethical judgments on the current developments of scientific investigations can be proposed Cloning is also the paradox on which the confrontation between scientific research and popular imagination is focused
