Cullen,J. Siegrist,H. M. Wegmann,2012-12-06 The widespread interest in stressful aspects of contemporary society which contribute to its burden of illness and diseases e g gastro intestinal cardiovascular has led to a large number of state ments and reports which relate the manifestations to a maladaptation of the individual Furthermore recent research suggests that under some condi tions stress may have a more generalized effect of decreasing the body s ability to combat destructive forces and expose it to a variety of diseases Breakdown in adaptation occurs when an individual cannot cope with demands inherent in his environment These may be due to an excessive mental or physical load including factors of a social or psychological nature and task performance requirements ranging from those which are monotonous simple and repetitive to

complex fast decision taking ones Experience shows however that not all people placed under the same conditions suffer similarly and it follows that to the social and psychological environment should be added a genetic factor influencing through the brain the responses of individuals It is clear that besides human suffering this breakdown in adaptation causes massive losses of revenue to industry and national health authorities Thus a reduction in stress before breakdown occurs or an improvement in coping with it would be very valuable Human Safety and Risk Management A.
