Metaphor and Analogy in the Sciences F. Hallyn, 2013-03-14 Science constructs its objects is this a metaphor It does not necessarily mean anyway that the real does not pre exist Only that in the final instance it is the Other of which we know neither the limits nor the figure and to which we only have access through the constructions we make of it Or in semiotic terms borrowed from Charles S Peirce the world is the dynamic object that intervenes in science only through the immediate objects that manifest themselves in signs And even then the choice of the term immediate is not entirely felicitous it would be better to talk of mediated objects since their conception is mediated by the conditions from which perception as well as the language that expresses it derive The preference bestowed on certain constructions over others results from the slighter

recalcitrance in imagining a dynamic object through one or another mediated object This recalcitrance that prompts one to surrender constructions does not come directly from the real from the dynamic object but from other constructions Again this does not mean that reality does not exist but that it only speaks confirms and objects to the extent that it is being questioned within a certain form by certain instruments in a certain language Even if it appears recalcitrant the dynamic object intervenes only through another construction Man not nature decides on the form to be considered the instruments and language to be adopted
