Arsenic In The Environment Pt 1 Vol 1 Cycling And Characterization:

Managing Arsenic in the Environment R. Naidu, 2006 Contains contributions from an international team of key researchers in the field Includes individual country reviews and recent international case studies giving a broad perspective on the extent and severity of arsenic contamination and poisoning throughout the Asia Pacific region where the majority of research has occurred to date Takes a whole of systems approach providing a comprehensive picture of the transfer of arsenic from ground water to humans impacts to human health and management strategies Describes recent technological advances for risk management and remediation

Vanadium in the Environment, Part 1 Jerome O. Nriagu, 1998-03-06 Up to date coverage of vanadium research in two accessible self contained volumes Vanadium in the Environment brings together the contributions of leading experts on the chemical and toxicological aspects of vanadium exposure and its effects on aquatic and terrestrial environments human health and wildlife This initial volume focuses on chemistry and biochemistry while Part Two concentrates on health effects and toxicology in living organisms Topics in this first volume include History occurrence and uses of vanadium Vanadium in the atmosphere Chemistry of relevance to vanadium in the environment Water quality criteria for vanadium Spectroscopic methods for the characterization of vanadium complexes Bioaccumulation and transfer of vanadium in marine organisms Structure function and models of biogenic vanadium compounds Catalytic effects of vanadium on phosphoryl transfer enzymes Bioactivity of vanadium compounds on cells in culture

Arsenic: Natural and Anthropogenic Eleonora Deschamps, Jörg Matschullat, 2011-02-25 The discussion on arsenic in the environment is complex and must grasp the importance of very many mostly unrelated works on individual aspects This volume represents one of the first comprehensive and interdisciplinary examinations into arsenic s behaviour in air water soils sediments plants and the human body Based on state of the art investigations into the global arsenic cycle the related human toxicology and available remediation technologies arsenic is assessed holistically in all the environmental compartments Using the results of primary research the authors offer concrete suggestions for risk reduction and management of environmental pollution that allow the reader to successfully tackle similar problems and find sustainable solutions The book consists of three essential parts Review of the current knowledge of arsenic behaviour in the environment global biogeochemical cycles toxicology remediation techniques immobilization technologies and environmental legislation Case studies for mining related arsenic problems Discussion of mitigation and remediation technologies and approaches such as environmental education hygiene training backed by real experience and successful implementation in the study area In a highly coherent manner the book makes use of 120 tables and figures a large number of literature citations and very detailed subject index that encompasses references to provide rapid and up to date access to all relevant information Cross references provide a great manoeuvrability between the chapters The book delivers very insightful and hands on approaches for graduate students and professionals working on arsenic questions not only in environmental science but also in the fields of environmental
