Art and Innovation Craig Harris,1999 The idea behind Xerox s interdisciplinary Palo Alto Research Center PARC is simple If you put creative people in a hothouse setting innovation will naturally emerge PARC s Artist in Residence Program PAIR brings artists who use new media to PARC and pairs them with researchers who often use the same media though in different contexts The result is both interesting art and new scientific innovations Art and Innovation explores the unique process that grew from this pairing of new media artists and scientists working at the frontier of developing technologies In addition to discussing specific works created during several long term residencies the artists and researchers reveal the similarities and differences in their approaches and perspectives as they engage each other in a search for new methods of communication and creativity

**The CCL Handbook of Coaching** Sharon Ting,Peter Scisco,2012-06-14 Coaching is vital to developing talent in organizations and it is an essential capability of effective leaders The CCL Handbook of Coaching is based on a philosophy of leadership development that the Center for Creative Leadership has honed over thirty years with rigorous research and with long rich experience in the practice of leadership coaching The book uses a coaching framework to give a compass to leaders who are called to coach as a means of building sustainability and boosting performance in their organizations The book explores the special considerations that leader coaches need to account for when coaching across differences and in special circumstances describes advanced coaching techniques and examines the systemic issues that arise when coaching moves from a one to one relationship to a developmental culture that embraces entire organizations

Fusing Lab and Gallery Sarah M. Schlachetzki,2014-03-15 Why do Japanese artists team up with engineers in order to create so called Device Art What is a nanoscientist s motivation in approaching the artworld In the past few years there has been a remarkable increase in attempts to foster the exchange between art technology and science an exchange taking place in academies museums or even in research laboratories Media art has proven especially important in the dialogue between these cultural fields This book is a contribution to the current debate on art science interdisciplinarity and the discourse of innovation It critically assesses artistic positions that appear as

the ongoing attempt to localize art's position within technological and societal change between now and the future

Dialogues between Art and Business Anke Strauß, 2017-06-20 The relationship between the fine art and the business sphere has never been harmonious it has been rejected fought about ignored exploited criticised and questioned but it is still omnipresent Commonly assumed to be antagonistic situating art and the business organisation sphere in the discourses of new knowledge creation and learning however holds the potential of exploring new ways of relating the two spheres This book investigates such potentialities discussing the limits and challenges of these new forms of relating It does so by first outlining the changing discourses of the art and business spheres and how they produce different ways of relating to their respective worlds Second it brings into conversation an ethnographic study of an art business collaboration organised by two artists with a Deleuzian concept of dialogue Dialogue here is understood as a non hierarchical encounter developing between two spheres a source of creation no longer belonging to anyone In what is here termed a machinic research framework accounting for composition and movement on all scales the book shows how making connections is a discursive and material practice with expectations and imaginaries playing a central role It also addresses the paradoxical interplays between losing control and maintaining control in collaborative attempts between reaching out for the Other and carrying out identity work and between positions in the centre and in the margins of the highly stratified and codified areas of business organisations and fine art Eventually this book examines small dialogical instances that escape the stratifying forces dividing the two worlds thereby creating a temporary space It closes with a reflection on the role of research in thinking and making new ways of relating the world of fine art and the business organisation sphere

*The Hidden Sense* Cretien Van Campen, 2010-02-26

The uncommon sensory perceptions of synesthesia explored through accounts of synesthetes experiences the latest scientific research and suggestions of synesthesia in visual art music and literature What is does it mean to hear music in colors to taste voices to see each letter of the alphabet as a different color These uncommon sensory experiences are examples of synesthesia when two or more senses cooperate in perception Once dismissed as imagination or delusion metaphor or drug induced hallucination the experience of synesthesia has now been documented by scans of synesthetes brains that show crosstalk between areas of the brain that do not normally communicate In *The Hidden Sense* Cretien van Campen explores synesthesia from both artistic and scientific perspectives looking at accounts of individual experiences examples of synesthesia in visual art music and literature and recent neurological research Van Campen reports that some studies define synesthesia as a brain impairment a short circuit between two different areas But synesthetes cannot imagine perceiving in any other way many claim that synesthesia helps them in daily life Van Campen investigates just what the function of synesthesia might be and what it might tell us about our own sensory perceptions He examines the experiences of individual synesthetes from Patrick who sees music as images and finds the most beautiful ones spring from the music of Prince to the schoolgirl Sylvia who is surprised to learn that not everyone sees the alphabet in colors as she does And he finds suggestions of synesthesia in the work of Scriabin Van Gogh Kandinsky Nabokov Poe and Baudelaire What is synesthesia It is not van Campen concludes an audiovisual performance a literary technique an artistic trend or a metaphor It is perhaps our hidden sense a way to think visually a key to our own sensitivity

Sustainable City and Creativity Dr Tüzün Baycan, Professor Luigi Fusco Girard, Professor Peter Nijkamp, 2012-11-28 The notion of creative cities where cultural activities and creative and cultural industries play a crucial role in supporting urban creativity and contributing to the new creative economy has become central to most regional and urban development strategies in recent years A creative city is supposed to develop imaginative and innovative solutions to a range of social economic and environmental problems economic stagnancy urban shrinkage social segregation global competition or more Cities and regions around the world are trying to develop facilitate or promote concentrations of creative innovative and or knowledge intensive industries in order to become more competitive These places are seeking new strategies to combine economic development with quality of place that will increase economic productivity and encourage growth Against this increasing interest in creative cities this volume offers a coherent set of articles on sustainable and creative cities and addresses modern theories and concepts relating to research on sustainability and creativity It analyses principles and practices of the creative city for the formulation of policies and recommendations towards the sustainable city It brings together leading academics with different approaches from different disciplines to provide a comprehensive and holistic overview of creativity and sustainability of the city linking research and practice In doing so it puts forward ideas about stimulating the production of an innovative knowledge for a creative and sustainable city and transforming a specific knowledge into a general common knowledge which suggests best future policy actions decision

making processes and choices for the change towards a human sustainable development of the city **Video** Yvonne Spielmann, 2010-08-13 An argument that video is not merely an intermediate stage between analog and digital but a medium in its own right traces the theoretical genealogy of video and examines the different concepts of video seen in works by Vito Acconci Ulrike Rosenbach Steina and Woody Vasulka and others Video is an electronic medium dependent on the transfer of electronic signals Video signals are in constant movement circulating between camera and monitor This process of simultaneous production and reproduction makes video the most reflexive of media distinct from both photography and film in which the image or a sequence of images is central Because it is processual and not bound to recording and the appearance of a frame video shares properties with the computer In this book Yvonne Spielmann argues that video is not merely an intermediate stage between analog and digital but a medium in its own right Video has metamorphosed from technology to medium with a set of aesthetic languages that are specific to it and current critical debates on new media still need to recognize this Spielmann considers video as transformation imagery acknowledging the centrality in video of the transitions between images and the fact that these transitions are explicitly reflected in new processes After situating video in a genealogical model that demonstrates both its continuities and discontinuities with other media Spielmann considers three strands of video praxis documentary experimental art and experimental image making which is concerned primarily with signal processing She then discusses selected works by such artists as Vito Acconci Ulrike Rosenbach Joan Jonas Nam June Paik Peter Campus Dara Birnbaum Nan Hoover Lynn Hershman Gary Hill Steina and Woody Vasulka Bill Seaman and others These works serve to demonstrate the spectrum of possibilities in video as medium and point to connections with other forms of media Finally Spielmann discusses the potential of interactivity complexity and hybridization in the future of video as a medium MediaArtHistories Oliver Grau, 2010-08-13 Leading scholars take a wider view of new media placing it in the context of art history and acknowledging the necessity of an interdisciplinary approach in new media art studies and practice Digital art has become a major contemporary art form but it has yet to achieve acceptance from mainstream cultural institutions it is rarely collected and seldom included in the study of art history or other academic disciplines In MediaArtHistories leading scholars seek to change this They take a wider view of media art placing it against the backdrop of art history Their essays demonstrate that today's media art cannot be understood by technological details alone it cannot be understood without its history and it must be understood in proximity to other disciplines film cultural and media studies computer science philosophy and sciences dealing with images Contributors trace the evolution of digital art from thirteenth century Islamic mechanical devices and eighteenth century phantasmagoria magic lanterns and other multimedia illusions to Marcel Duchamp's inventions and 1960s kinetic and op art They reexamine and redefine key media art theory terms machine media exhibition and consider the blurred dividing lines between art products and consumer products and between art images and science images Finally MediaArtHistories offers an approach for an interdisciplinary expanded image science

Fishwick, 2006 The application of the theory and practice of art to computer science how aesthetics and art can play a role in computing disciplines *The Global Genome* Eugene Thacker, 2006-09-08 How global biotechnology is redefining life itself In the age of global biotechnology DNA can exist as biological material in a test tube as a sequence in a computer database and as economically valuable information in a patent In *The Global Genome* Eugene Thacker asks us to consider the relationship of these three entities and argues that by their existence and their interrelationships they are fundamentally redefining the notion of biological life itself Biological science and the biotech industry are increasingly organized at a global level in large part because of the use of the Internet in exchanging biological data International genome sequencing efforts genomic databases the development of World Intellectual Property policies and the borderless business of biotech are all evidence of the global intersections of biology and informatics of genetic codes and computer codes Thacker points out the internal tension in the very concept of biotechnology the products are more tech than bio but the technology itself is fully biological composed of the biomaterial labor of genes proteins cells and tissues Is biotechnology a technology at all he asks or is it a notion of life itself that is inseparable from its use in the biotech industry The three sections of the book cover the three primary activities of biotechnology today the encoding of biological materials into digital form as in bioinformatics and genomics its recoding in various ways including the biocolonialism of mapping genetically isolated ethnic populations and the newly pervasive concern over biological security and its decoding back into biological materiality as in tissue engineering and regenerative medicine Thacker moves easily from science to philosophy to political economics enlivening his account with ideas from such thinkers as Georges Bataille Georges Canguilhem Michel Foucault Antonio Negri and Paul Virilio The global genome says Thacker makes it impossible to

consider biotechnology without the context of globalism

**At a Distance** Annmarie Chandler, 2005 The theory and practice of networked art and activism including mail art sound art telematic art fax art Fluxus and assemblings Networked collaborations of artists did not begin on the Internet In this multidisciplinary look at the practice of art that takes place across a distance geographical temporal or emotional theorists and practitioners examine the ways that art activism and media fundamentally reconfigured each other in experimental networked projects of the 1970s and 1980s By providing a context for this work showing that it was shaped by varying mixes of social relations cultural strategies and political and aesthetic concerns *At a Distance* effectively refutes the widely accepted idea that networked art is technologically determined Doing so it provides the historical grounding needed for a more complete understanding of today's practices of Internet art and activism and suggests the possibilities inherent in networked practice *At a Distance* traces the history and theory of such experimental art projects as Mail Art sound and radio art telematic art assemblings and Fluxus Although the projects differed a conceptual questioning of the art object combined with a political undermining of dominant art institutional practices animated most distance art After a section that sets this work in historical and critical perspective the book presents artists and others involved in this art re-viewing their work including experiments in mini FM telerobotics networked psychoanalysis and interactive book construction Finally the book recasts the history of networks from the perspectives of politics aesthetics economics and cross cultural analysis

**CODE** Rishab Ghosh, 2006-09-08 How open source creative collaboration provides an alternative to commercially driven policies determining intellectual property rights Open source software is considered by many to be a novelty and the open source movement a revolution Yet the collaborative creation of knowledge has gone on for as long as humans have been able to communicate *CODE* looks at the collaborative model of creativity with examples ranging from collective ownership in indigenous societies to free software academic science and the human genome project and finds it an alternative to proprietary frameworks for creativity based on strong intellectual property rights Intellectual property rights argues Rishab Ghosh in his introduction were ostensibly developed to increase creativity but today policy decisions that treat knowledge and art as if they were physical forms of property actually threaten to decrease creativity limit public access to creativity and discourage collaborative creativity Newton should have had to pay a license fee before being allowed even to see how tall the shoulders of giants were let alone to stand upon them he writes The contributors to *CODE* from such diverse fields as economics anthropology law and software development examine collaborative creativity from a variety of perspectives looking at new and old forms of creative collaboration and the mechanisms emerging to study them Discussing the philosophically resonant issues of ownership property and the commons they ask if the increasing application of the language of property rights to knowledge and creativity constitutes a second enclosure movement or if the worldwide acclaim for free software signifies a renaissance of the commons Two concluding chapters offer concrete possibilities for both alternatives with one proposing the establishment of positive intellectual rights

to information and another issuing a warning against the threats to networked knowledge posed by globalization
