Army Air Missile Defence Future Challen:

Army Air and Missile Defense Frances M. Lussier, 2002 No one knows what the world will look like in 25 years but the US Army must take steps now if it is to defend itself against future enemies This work examines six future scenarios and looks at potential areas of air and missile defense shortfalls

Army Air and Missile Defense. Future Challenges, 2002 The Army must take steps today if it is to provide effective air and missile defenses against the threats that will emerge 20 years hence Most analysts predict that the globalization of the economy means that existing and new technologies will become increasingly available worldwide and that many sophisticated weapons will be easier and cheaper to produce or acquire But trends in the international political sphere are harder to identify The international arena has seen such flux in the past two decades that it is difficult to predict what changes will occur in the next 20 to 25 years but they could be substantial RAND examined how a wide range of possible trends might shape the future world situation Doing so we believe provides insight into how these trends and accompanying technological changes might influence the Army's plans to develop its air and missile defenses AMD We drew on previous RAND work that characterized six possible futures for 2025 to establish a context for Army AMD in the period Representative scenarios for each of these futures provided a means for illustrating how differing geopolitical or strategic situations might influence air and missile defense requirements for the future We used the six scenarios to identify potential AMD shortfalls or redundancies in various settings and consequently those areas where the Army might best focus its research and development R D efforts

Missile Defence Sten Rynning, Bertel Heurlin, 2005-11-17 The missile defence policy of the US plays a crucial role in international affairs and is normally studied from a US perspective This book is different it delivers a sharp analysis of regional and national variations and integrates them with US viewpoints to present a rounded and comprehensive study What will be the international ramifications of American plans to deploy a comprehensive national missile defence policy This is a key question for all those wishing to build a sense of the global future and is here answered with clarity and rigour by expert contributors This new study breaks the mould of traditional assessments that focus exclusively on the US world picture and are inevitably one dimensional Here we see that US action automatically entails reactions as this text advances a more balanced approach By integrating a focus on US policy with a strong analysis of regional dynamics it demonstrates that the global ramifications of US policy are indeed contingent upon distinct regional and national variations These differences in turn have consequences both for the challenges the US faces in relation to missile defence and for the future of world politics This is an innovative and groundbreaking study that contains lessons for those wishing to safeguard the future by becoming alert to its challenges and complexities

RAND Arroyo Center Research Brief: Future Air Missile Threats, 2002 Rarely has the U S Army had to worry about air attack Since the early days of World War II the Air Force and its predecessors have owned the skies and the Army has been able to carry out its missions largely unimpeded by aerial threats But that may change A global

economy promises to make technologies of all types widely available which means that even sophisticated weapons will be cheaper and easier to get These include not only the tactical ballistic missiles that menaced U S forces during the Gulf War but also cruise missiles and armed unmanned aerial vehicles UAVs The long time it takes to develop and buy weapons forces the Army to start today to defend itself against the threats of tomorrow Researchers from RAND s Arroyo Center analyzed six plausible future worlds to determine which types of air and missile threats might confront the Army in a range of geopolitical or strategic situations with an eye to determining where it should invest its research and development funds Results of the analysis appear in Army Air and Missile Defenses Future Challenges Their major conclusions are that The Army needs to invest more in cruise missile defenses 1 The Army should retain and improve its short range missile defense against aircraft 2 Developing laser weapons against rockets and artillery may not be worth the cost 3 Planned defenses against tactical ballistic missiles appear adequate in most cases

General Accounting Office,1986 What is the Future of Army Air and Missile Defense? Ralph Mark McGee,Army War College (U.S.),2003 This paper will provide a critical review of the Army s transformation plan as it applies to Air and Missile Defense This is accomplished by reviewing national requirements threat and historical precedent The Army has traditionally built a land power force to promote and protect our national interests As the aerial threats have evolved from being aircraft centric to missile centric does the Army s transformation plan provide adequate flexibility and sufficient full dimensional protection for Joint Force commanders and the nation By examining the current status of transformation and defining the anticipated threat this paper will examine specific areas of concern and offer possible solutions in terms of capabilities priorities and force structure It will also provide a series of historical comparisons that are relevant to the evolution in aerial threats that is occurring today Yours for the Future ...
