Aromatic and Heteroaromatic Chemistry C. W. Bird, G. W. H. Cheeseman, 1973-12-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields, the series creates a unique service for the active research chemist, supplying regular, critical, in-depth accounts of progress in particular areas of chemistry. For over 80 years, the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967, the whole spectrum of chemistry could no longer be contained within one volume, and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three volumes covering Inorganic, Organic, and Physical Chemistry. For more general coverage of the highlights in chemistry, they remain a must. Since that time, the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name, whereas others have had to be discontinued.

The contents select what are judged to be truly important facets of modern organic chemistry. Emphasis has been given throughout to the properties and reactions of all the important classes of organic compounds including the remarkable array of different compounds prepared by synthesis as well as natural products created by biosynthesis. The information is presented in a concise and logical manner with mechanistic organic chemistry being adopted to provide a constant and correlative theme.
