Management of Arrhythmias in Cardiac Amyloidosis

Sharon Giancaterino, MD, Marcus A. Urey, MD, Douglas Darden, MD, Jonathan C. Hsu, MD, MAS

ABSTRACT

Cardiac amyloidosis is characterized by extracellular protein fibril deposition in the myocardium leading to restrictive heart failure. Both atrial and ventricular arrhythmias, along with conduction disease, are common in cardiac amyloidosis, and are often highly symptomatic and poorly tolerated. Many commonly used therapeutics such as beta-blockers, calcium-channel blockers, and digoxin may be poorly tolerated and lead to clinical decompensation in this population, adding complexity to the co-management of these conditions. In addition, studies have shown that atrial fibrillation with cardiac amyloidosis carries a high risk of stroke and systemic embolism, making anticoagulation indicated in all patients regardless of CHA₂DS₂-VASc score. Ventricular arrhythmias are common, whereas an implantable cardioverter-defibrillator has not been shown to improve survival. Conduction disease is also common and permanent pacemaker placement is often needed. High-quality evidence and guideline recommendations are limited with regard to the management of arrhythmias in cardiac amyloidosis. Providers are often left to clinical experience and expert consensus to aid in decision-making. In this focused review, we outline current guideline recommendations, summarize both historical and contemporary data, and describe evidence-based strategies for managing arrhythmias and their sequelae in patients with cardiac amyloidosis. Amyloidosis is characterized by extracellular protein fibril deposition throughout the body's organ systems (1). When involving the myocardium, it can often lead to a restrictive cardiomyopathy. Approximately 95% of cardiac amyloidosis is misfolded transthyretin (ATTR) or immunoglobulin light-chain (AL) types (2-4). The ATTR group is characterized by misfolding of transthyretin, a protein made in the liver. Both wild-type ATTR cardiomyopathy (wtATTR-CM) and hereditary transthyretin cardiomyopathy (hATTR-CM) have been described. The prevalence of wtATTR-CM is

estimated to be between 5.5% and 16.0% of people age >80 years of age, whereas hATTR-CM may be rarer and prevalence estimates range by specific gene mutation (5). AL amyloidosis is a clonal plasma cell proliferative disorder characterized by production of abnormal protein fibrils in the bone marrow. The estimated prevalence of AL amyloidosis in the United States ranges from 15.5 to 40.5 cases per million (4,6,7). Overall, cardiac amyloidosis is thought to be an under-recognized cause of heart failure. Recent trends have revealed a significant increase in the number of new diagnoses of ATTR-CM

Arrhythmias Case Studies C. T. Kappagoda,1985 Cardiac Arrhythmias M. Schlepper,B. Olsson,2012-12-06 Asked to organize an international meeting on Propafenone Ryt monorm we had to question ourselves whether to accept this offer just as interested physicians or in our capacity as chairmen of the study group on arrhythmias and intracardiac electrography of the European Society of Cardiology Considering the pros and contras and well aware that one can easily be regarded as product promoter we nevertheless choose to organize the Symposion in association with the study group We felt justified to do so for a number of reasons Arrhyth mias and their treatment as well as the tools to detect the first and to control the latter

are well within the scope of the study group An international symposium provided the opportunity to have the state of the art in arrhythmias and antiarrhythmic treatment thoroughly reviewed by internationally renowned investigators thus serving an educational purpose Furthermore it was the intention and aim of the meeting to have what is known about a fairly new drug presented in a critical manner and to point out what is not known but should be known It is in that context the presentations of the free session should be judged To the careful reader it will become apparent that much which was not said can be read between the lines

PROFILES POTENTIAL TREATMENT APPROACHES FOR CARDIAC ARRHYTHMIAS Cardiac arrhythmias of ventricular origin are responsible for the deaths of nearly half a million Americans each year while atrial fibrillation accounts for about 2 3 million cases per year a rate that is projected to increase 2 5 fold over the next half century Effectively managing these cardiac rhythm disorders remains a major challenge for both caregivers and the pharmaceutical industry Filling a gap in the current literature Novel Therapeutic Targets for Antiarrhythmic Drugs presents the latest treatments for cardiac arrhythmias alongside comprehensive presentations of basic cardiac physiology and pharmacology Written by leading experts in their research areas this invaluable resource offers both practitioners and researchers a one stop guide that brings together previously dispersed information The text consists of four sections Section One comprehensively reviews basic cardiac electrophysiology the mechanisms responsible for arrhythmias in the setting of ischemia and basic pharmacology of antiarrhythmic drugs Section Two addresses safety pharmacology including the concept of repolarization reserve safety challenges and regulatory issues for the development of novel antiarrhythmic drugs Section Three describes several novel pharmacological targets for antiarrhythmic drugs including both ion channel and non ion channel targets Section Four describes promising non pharmacological antiarrhythmic interventions including selective cardiac neural disruption or nerve stimulation aerobic exercise training and diet omega 3 fatty acids Offering an unparalleled look at the current state and future direction of cardiac arrhythmia treatment Novel Therapeutic Targets for Antiarrhythmic Drugs provides an important resource to advanced students working researchers and busy professionals alike

Clinical Cases in Cardiac Electrophysiology: Supraventricular Arrhythmias Lucian Muresan, 2022 This is the first of a three volume project aimed at providing unique case reports 20 cases per volume of a large number of supraventricular and ventricular arrhythmias encountered in clinical practice The book is focused on the treatment of supraventricular arrhythmias namely focal atrial tachycardias typical and atypical AVNRT and accessory pathways both manifest and concealed All presented cases were performed using the CARTO electro anatomical mapping system which allows the reader to better understand the arrhythmia features due to the high number of images provided A large number of

high quality figures which represent the core of the authors work enrich the contents all cases are built around suggestive figures acquired during the patients hospitalization which clearly illustrate important concepts used in catheter ablation of cardiac arrhythmias The figures are not only related to the catheter ablation procedure but also to the patient history thus helping the reader to place the invasive treatment of the arrhythmias into clinical context electrocardiograms Holter ECGs signal averaged ECGs chest X Rays transthoracic and transesophageal echocardiography images MRI CT scans coronary angiography images are provided when considered relevant in order to better present the patient s condition Short videoclips with activation maps of the atria or the ventricles during the studied arrhythmia complete the information provided Teaching oriented all chapters include questions and answers and key messages at the end of each case For this reason it will be an invaluable tool for cardiologists clinical cardiac electrophysiologists and interventional cardiac electrophysiologists in training but also for all those interested in learning more about the subject Cardiac Arrhythmias: Interpretation, Diagnosis and Treatment, Second Edition George J. Antonio Raviele, 2006-07-08 The year 1988 marked the beginning of the International Workshop on Cardiac Arrhythmias This
biannual series of meetings was initiated with the following goals 1 to present technological advances in the field of cardiac
arrhythmias 2 to publicise the results of current research and 3 to assess the impact of new diagnostic and therapeutic
approaches In addition by bringing together experts in this field controversial aspects in the diagnosis and treatment of
cardiac arrhythmias could be discussed allowing a consensus to be reached regarding the evaluation and management of
specific disease conditions The success achieved in reaching these goals and the utility of the workshops have been confirmed
by their increasing recognition and level of attendance The Proceedings of the Ninth Edition of the Workshop is a compilation
of the topics presented at the most recent meeting which was held in Venice at the Fondazione Giorgio Cini from the 2nd to
the 5th of October 2005 The book is divided into eight sections each addressing a different aspect of cardiac arrhythmia
