Arsenic In Drinking Water:

Arsenic in Drinking Water National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Subcommittee on Arsenic in Drinking Water, 1999-07-14 The U S Environmental Protection Agency EPA has been considering a more stringent regulation of arsenic in water A significant reduction in the maximum contaminant level MCL could increase compliance costs for water utilities This book discusses the adequacy of the current EPA MCL for protecting human health in the context of stated EPA policy and provides an unbiased scientific basis for deriving the arsenic standard for drinking water and surface water Arsenic in Drinking Water evaluates epidemiological data on the carcinogenic and noncarcinogenic health effects of arsenic exposure of Taiwanese populations and compares those effects with the effects of arsenic exposure demonstrated in other countries including the United States The book also reviews data on toxicokinetics metabolism and mechanism and mode of action of arsenic to ascertain how these data could assist in assessing human health risks from arsenic exposures This volume recommends specific changes to improve the toxicity analyses and risk characterization The implications of the changes for EPA s current MCL for arsenic are also described Arsenic in Drinking Water Canada. Health Canada, 1999 **Arsenic and Drinking Water** , 2021 **Arsenic in Drinking Water and Food** Sudhakar Srivastava, 2020 Arsenic contamination poses a major environmental problem especially in Southeast Asian countries like Bangladesh and India Threatening the health of millions of people due to arsenic s toxicity and carcinogenicity the major routes of arsenic exposure for humans are either through drinking water or crops Rice is the crop most affected by arsenic owing to its cultivation in major arsenic contaminated areas biogeochemical factors in the soil during rice growth and specific features of rice that enable it take up more arsenic than other crop plants This book addresses the problem of arsenic by pursuing a holistic approach It presents the status quo in different parts of the world North and South America Europe Asia etc and provides essential information on food related arsenic exposure risks for humans and possible preventive and curative measures for tackling arsenic poisoning It covers the arsenic contamination status of rice rice based products other vegetables fishes mushrooms and other foods with a special focus on rice arsenic interactions The mechanisms of arsenic uptake translocation and distribution in plants and grains are also explained In closing the book reviews a variety of prospective agronomic and biotechnological solutions to the problem of arsenic accumulation in rice grains The book is intended for a broad audience including researchers scientists and readers with diverse backgrounds including agriculture environmental science food science environmental management and human health It can also be used as an important reference guide for undergraduate and graduate students university faculties and environmentalists **Arsenic in Drinking Water and Food** Sudhakar Srivastava, 2019-08-08 Arsenic contamination poses a major environmental problem especially in Southeast Asian countries like Bangladesh and India Threatening the health of millions of people due to arsenic s toxicity and carcinogenicity the major routes of arsenic exposure for humans are either through drinking water or crops

Rice is the crop most affected by arsenic owing to its cultivation in major arsenic contaminated areas biogeochemical factors in the soil during rice growth and specific features of rice that enable it take up more arsenic than other crop plants This book addresses the problem of arsenic by pursuing a holistic approach It presents the status quo in different parts of the world North and South America Europe Asia etc and provides essential information on food related arsenic exposure risks for humans and possible preventive and curative measures for tackling arsenic poisoning It covers the arsenic contamination status of rice rice based products other vegetables fishes mushrooms and other foods with a special focus on rice arsenic interactions The mechanisms of arsenic uptake translocation and distribution in plants and grains are also explained In closing the book reviews a variety of prospective agronomic and biotechnological solutions to the problem of arsenic accumulation in rice grains The book is intended for a broad audience including researchers scientists and readers with diverse backgrounds including agriculture environmental science food science environmental management and human health It can also be used as an important reference guide for undergraduate and graduate students university faculties and environmentalists

Best Practice Guide on the Control of Arsenic in Drinking Water Prosun Bhattacharya, David Polya, Dragana Jovanovic, 2017-07-15 Arsenic in drinking water derived from groundwater is arguably the biggest environmental chemical human health risk known at the present time with well over 100 000 000 people around the world being exposed Monitoring the hazard assessing exposure and health risks and implementing effective remediation are therefore key tasks for organisations and individuals with responsibilities related to the supply of safe clean drinking water Best Practice Guide on the Control of Arsenic in Drinking Water covering aspects of hazard distribution exposure health impacts biomonitoring and remediation including social and economic issues is therefore a very timely contribution to disseminating useful knowledge in this area The volume contains 10 short reviews of key aspects of this issue supplemented by a further 14 case studies each of which focusses on a particular area or technological or other practice and written by leading experts in the field Detailed selective reference lists provide pointers to more detailed guidance on relevant practice The volume includes coverage of i arsenic hazard in groundwater and exposure routes to humans including case studies in USA SE Asia and UK ii health impacts arising from exposure to arsenic in drinking water and biomonitoring approaches iii developments in the nature of regulation of arsenic in drinking water iv sampling and monitoring of arsenic including novel methodologies v approaches to remediation particularly in the context of water safety planning and including case studies from the USA Italy Poland and Bangladesh and vi socio economic aspects of remediation including non market valuation methods and local community engagement

Arsenic in Drinking Water National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee to Update the 1999 Arsenic in Drinking Water Report, 2001-11-26 Having safe drinking water is important to all Americans The Environmental Protection Agency's decision in the summer of 2001 to delay implementing a new more stringent standard for the maximum

allowable level for arsenic in drinking water generated a great deal of criticism and controversy. Ultimately at issue were newer data on arsenic beyond those that had been examined in a 1999 National Research Council report. EPA asked the National Research Council for an evaluation of the new data available. The committee's analyses and conclusions are presented in *Arsenic in Drinking Water* 2001 Update. New epidemiological studies are critically evaluated as are new experimental data that provide information on how and at what level arsenic in drinking water can lead to cancer. The report's findings are consistent with those of the 1999 report that found high risks of cancer at the previous federal standard of 50 parts per billion. In fact, the new report concludes that men and women who consume water containing 3 parts per billion of arsenic daily have about a 1 in 1 000 increased risk of developing bladder or lung cancer during their lifetime. **Arsenic**

Water Resources Contamination Ali Fares, Sushant K. Singh, 2019-07-02 This edited volume brings together a diverse group of environmental science, sustainability, and health researchers to address the challenges posed by global mass poisoning caused by arsenic water contamination. The book sheds light on this global environmental issue and proposes solutions to aquatic contamination through a multi-disciplinary lens and case studies from Bangladesh and India. The book may serve as a reference to environment and sustainability researchers, students, and policy makers. Part one of the book describes the issue of arsenic contamination in ground water and river basins, including its source and distribution in specific locations in India. Part two explains the routes of exposure to environmental arsenic, its transport in aquatic ecosystems, and the health risks linked to arsenic exposure in food and the environment. Part three addresses sustainable arsenic contamination mitigation strategies and policies, the socioeconomic, demographic, cultural, and psychological aspects of arsenic contamination, and the potential applications of GIS and remote sensing in providing solutions. Part four concludes by discussing the role of local and regional institutions in water resources management for a variety of issues, including but not limited to arsenic contamination, and presents a case study in the Indus river basin in Pakistan to propose future contamination mitigation strategies. **Arsenic in Drinking Water**, 1991 **Arsenic** Bryan Black, 1999 The recently lowered arsenic maximum contaminant level (MCL) presents new challenges in the monitoring and treatment capabilities of drinking water utilities. This report provides advice to utilities and consultants as they monitor, make treatment modifications to control arsenic, and explain arsenic issues to the public. It overviews research on arsenic in drinking water with respect to health issues, occurrence, monitoring, and treatment, and reviews the major treatment processes: coagulation, lime softening, iron/manganese removal, ion exchange, activated alumina, reverse osmosis, nanofiltration, and augmented micro or ultrafiltration.
