**Islamic Heritage Architecture** C.A. Brebbia, A. Martinez Boquera, 2016-12-28 This book contains papers presented at the 1st International Conference on Islamic Heritage Architecture and Art. The papers deal with the design of many types of buildings in Islamic countries and the influence that these structural forms have had in non Islamic countries. Coverage will also include construction materials. There is much to learn from past experiences to arrive at solutions that are environmentally sound and sustainable in the long term. As conventional energy resources become scarce, the Islamic design heritage can offer invaluable lessons on how to deal with difficult and extreme environments in an efficient manner. Traditional architecture and urban environment in most Islamic countries is now being eroded by overemphasis on global type of architecture and city planning. Consequently, many regions are losing their identity. The Conference will aim to review these developments in the light of what the classical Islamic urban designs and architectures have to offer modern society. There will also be coverage of conservation techniques appropriate to the materials and structural forms used. The papers in this book cover such topics as Architectural conservation, Architectural heritage, Architecture in Malaysia and Indonesia, Climate adaptability, Conservation and restoration, Historical aspects, Houses and gardens, Islamic art and globalisation, Mosques and minarets, Ottoman Istanbul, Schools, The African Coast, The Islamic urban environment, The Mediterranean region, The use of light, Vernacular architecture, Wood and wooden roofs. The contents will be of interest to all researchers, practitioners, and government employees actively involved with Islamic Heritage Architecture.

**Construction Matters** Stefan Holzer, Silke Langenberg, Clemens Knobling, Orkun Kasap, 2025-03-04 Construction History. Construction Heritage. Recent Construction. Historiography. Industrialization. Engineering Sciences. Building Materials. Building Actors. Construction History is still a fairly new and small but quickly evolving field. The current trends in Construction History are well reflected in the papers of the present conference. Construction History has strong roots in the historiography of the 19th century and the evolution of industrialization, but the focus of our research field has meanwhile shifted notably to include more recent and also more distant histories as well. This is reflected in these conference proceedings where 65 out of 148 contributed papers deal with the built heritage or building actors of the 20th or 21st century. The conference also mirrors the wide spectrum of documentary and analytical approaches comprised within the discipline of Construction History. Papers dealing with the technical and functional analysis of specific buildings or building types are complemented by other studies focusing on the lives and formation of building actors from laborers to architects and engineers, from economical aspects to social and political implications, on legal aspects, and the strong ties between the history of construction and the history of engineering sciences. The conference integrates perfectly into the daily work at the Institute for Preservation and Construction History at ETH Zurich. Its two chairs, the Chair for Building Archaeology and Construction History and the Chair for Construction Heritage and Preservation, endeavor to cover the entire field and to bridge the gaps between the different approaches.

methodologies and disciplines between various centuries as well as technologies learning together and from each other The proceedings of 8ICCH give a representative picture of the state of the art in the field and will serve as a reference point for future studies
