Art Biology And Conservation:

Art, Biology, and Conservation Robert John Koestler, 2003 Despite the perception that artworks are timeless and unchanging they are actually subject to biological attack from a variety of sources from bacteria to fungi to insects This groundbreaking volume which publishes the proceedings of a conference held at The Metropolitan Museum of Art in 2002 explores how the development of these organisms can be arrested while preserving both the work of art and the health of the conservator The richly illustrated text containing the writings of over 40 scientists and conservators is divided into sections on stone and mural paintings paper textiles wood and archaeological materials treatment and prevention and special topics The artworks and cultural properties discussed include among many others Paleolithic cave paintings Tiffany drawings huts built by early Antarctic explorers and a collection of toothbrushes taken from Auschwitz victims

Fungi induced stains on paper are one of the most challenging forms of biodeterioration to study and to prevent this is because they involve living organisms and the ways in which fungi respond to changes in the environment and modifications of paper are unpredictable Yet there is a great desire among those who encounter fungi on documents manuscripts or artwork to remove fungi and clean the paper This experience in most cases is particularly challenging What are the reasons behind this challenge This ground breaking book attempts to answer this question among others by exploring the complex interfacial forces between paper fungi and their pigmented secretions which result in bio stains on paper Black fungi collectively referred to as Dematiaceous fungi were used in this study as a subset of pigment producing fungi species The focus is on two under studied aspects of the fungi infestation of paper an interface of fungal pigments and paper and the impact of light on the production of fungi bio stains The results of analytical testing included in this book elucidate the synergistic interactions between the environment biological clocks of the microorganisms and secretion of fungal pigments to paper The black fungal pigment formation is explored in depth in two scenarios one that is natural when the bio stains of original artworks have occurred over time by chance and another induced by *Aspergillus niger* in bio simulation on known papers in a controlled environment The findings are intended to provide guidance for preservation strategies mitigating the biodeterioration of paper and designing conservation treatment when applicable The surface of artworks and artifacts is of great aesthetic and artistic importance conversely it plays a significant role in governing fungal attachments In this book the paper surface is characterized in detail and in correlation with chemical and physical alterations caused by fungal pigmentation A broad range of analytical instruments was used for surface characterization such as surface metrology profilometers a confocal laser scanning microscope and environmental scanning electron microscope chemical microanalysis was carried out using X ray energy dispersive spectroscopy The novel three dimensional characterization of pigmented

fungal inclusions and their interaction with paper matrix was studied with micro X ray computed micro tomography on the synchrotron ESRF The proposed book is the first to explore the complexity of fungal paper interactions with the intention to assist professionals working with cultural materials especially paper based materials to make informed decisions when dealing with the fungi infestation of paper *Art, Biology and Conservation 2002* Metropolitan Museum of Art (New York, N.Y.),2002 440 *Great Colleges for Top Students* , Grants for Arts, Culture & the Humanities Foundation Center,2003-12 **Molecular Biology and Cultural Heritage** C. Saiz-Jimenez,2017-11-22 This book contains forty reviewed papers delivered at the International Congress on Molecular Biology and Cultural Heritage held in Seville March 2003 It is divided in four parts the first one presents the state of the art and reviews molecular techniques applied to the study of microbial communities colonizing monuments and cultural heritage assets Part two covers specific molecular techniques used in biodeterioration studies part three includes an updated overview on on going biodeterioration European Commission projects and part four presents selected biodeterioration case studies from all over the world *Art and Society 1972-2022-2072* Anton Biebl,Elisabeth Hartung,2023-12-13 Since the advent of modernity art has been associated with freedom provocation and courage In 1972 art was to unfold its potential as an emancipatory and creative force as part of the Gesamtkunstwerk of the XX Olympic Games in Munich according to the grand vision of its planners The international avant garde of the time including Walter de Maria Gerhard Richter Andy Warhol and Dan Flavin enthusiastically developed revolutionary concepts Many of these remained in draft form After the tragic assassination of Israeli athletes concepts such as the Spielstra e were canceled This publication is the first to give an impression of the playful participatory cultural programme of 1972 In the second part of the book a multitude of voices from all over the world look to the future International authors and artists use contemporary examples to convey the importance of the arts in shaping the democratic society of the future *Coping with Biological Growth on Stone Heritage Objects* Daniela Pinna,2017-05-18 *Coping with Biological Growth on Stone Heritage Objects Methods Products Applications and Perspectives* offers hands on guidance for addressing the specific challenges involved in conserving historical monuments sculptures archaeological sites and caves that have been attacked and colonized by micro and macroorganisms The volume provides many case studies of removal of biological growth with practical advice for making the right choices It presents detailed and updated information related to biocides and to alternative substances features that will be valuable to dealing with these challenges The author s goal is to provide access to information and offer the conceptual framework needed to understand complex issues so that the reader can comprehend the nature of conservation problems and formulate her his own views From bacteria to plants biological agents pose serious risks to the preservation of cultural heritage In an effort to save heritage objects buildings and sites conservators activities aim to arrest mitigate and prevent the damages caused by bacteria algae fungi lichens plants and birds Although much has been learned about these problems information is scattered across meeting proceedings and

assorted journals that often are not available to restorers and conservators This book fills the gap by providing a comprehensive selection and examination of international papers published in the last fifteen years focusing on the appropriate methods techniques and products that are useful for the prevention and removal of micro and macroorganisms that grow on artificial and natural stone works of art including wall paintings Results on new substances with antimicrobial properties and alternative methods for the control of biological growth are presented as well The book also emphasize issues on bioreceptivity of stones and the factors influencing biological growth and includes an outline of the various organisms able to develop on stones a discussion on the bioprotection of stones by biofilms and lichens a review of the main analytical techniques and a section on bioremediation This volume will be a valuable reference for cultural heritage conservators and restorers scientists and heritage site staff involved in conservation and maintenance of buildings archaeological sites parks and caves
