The Evaluation of Beta Blocker and Calcium Antagonist Drugs J. Morganroth, E. Neil Moore, 2012-12-06 With the beginning of the 1980 s it was becoming increasingly evident that the lack of approval of new cardiovascular agents for use by clinicians in the United States for the treatment of cardiovascular disorders was becoming a problem Patients requiring medical therapy for hypertension angina pectoris arrhythmias congestive heart failure and vasospastic disorders of the coronary arteries could receive in the United States only a small number of the drugs available to physicians in the rest of the world In fact as the 1980 s began there was only one available beta blocking agent released by The Food and Drug Administration and even as of this writing no oral calcium antagonist agent This lag in part has been due to the confusion of proper and expeditious methods to define safety and efficacy of such agents so that the United States regulatory agency Food and Drug Administration could approve the use of such agents by clinicians The vast number of new beta blocker and calcium antagonist agents being developed as well as the long term use abroad of many new drugs has raised important questions as to how relative safety and efficacy of such agents can be determined to facilitate availability in the United States

Amlodipine Winifred G. Nayler, 2012-12-06 Those who choose to increase their knowledge still further by reading will discover an exciting new world NOEL WHITTAKER in Making Money Made Simple 1989 The development of calcium antagonists has recently been described as

representing one of the major advances in cardiovascular therapeutics of the latter half of the twentieth century Braunwald 1990 However although the development of these drugs started in the mid nineteen sixties it is only recently that their real potential has begun to be appreciated Even now the calcium antagonist saga is not complete since new compounds continue to appear and new therapeutic applications emerge Based on the experience gained in the clinics in which these drugs have been used recognition is being given now to the need to improve upon the prototypes of the group Such improvement is resulting in the development and production not only of long acting formulations of the prototypes nifedipine verapamil and diltiazem but also of new calcium antagonists with improved tissue selectivity potency and duration of action To those of us who are interested in this field such a development is both exciting and rewarding As far as the clinicians who prescribe these drugs are concerned the long acting nature of some of the newer calcium antagonists should make the satisfactory management of their patients an achievable goal Antiplatelet Therapy In Ischemic Heart Disease Stephen D.
