Anthropic Principle The Conditions For The Existence Of Mankind In The Universe:

The Anthropic Principle F. Bertola, U. Curi, 1993-07-30 Long awaited proceedings of an important conference on the anthropic principle God, Humanity, and the Universe Alexei V. Nesteruk, 2023-10-27 The main objective of this book on cosmology and theology is to reassess the current approach to research in the field of interaction mediation and dialogue between modern cosmology and Christian theology Eastern Orthodox theology in particular This project was part of wide ranging cross disciplinary research undertaken by scientists philosophers and theologians across the world within the framework of Science Orthodoxy around the World run by the National Hellenic Research Foundation Athens from 2019 to 2023 The project and this publication contribute to the large scale academic activity in the field of science and religion or science and theology with a particular accent on the contribution of Eastern Orthodox theology to this dialogue as well as to the venues of advancement of this theology given the recent breakthroughs in cosmology physics and philosophy The book also underlines the importance of expressing cosmological ideas theologically symbolically and scientifically in the wide context of culture and humanity's sociopolitical and environmental predicaments **The Ascent of Man** James F. Harris, 2017-09-29 The Ascent of Man develops a comprehensive theory of human nature James F Harris sees human nature as an emergent property that supervenes a cluster of properties Despite significant overlap between individuals that have human nature and those that are biologically human the concept of human nature developed in this book is different Whether biologically human or not an individual may be said to possess human nature This theory of human nature is called the cluster theory Harris takes as his point of departure Plato's comment that in learning what a thing is we should look to the ways in which it acts upon or is acted upon by other things He commits to a methodological naturalism and draws upon current views from the social and biological sciences The cluster theory he develops represents one of the very few completely novel theories of human nature developed in the post Darwin era It will prove most useful in dealing with philosophical questions involving such contemporary issues as cloning cybernetics and the possibility of extraterrestrial life The fundamental conceptual issue is how plastic and elastic is the nature of human nature Just how different might we imagine human beings to be and still be human in the sense that they still possess whatever it is that accounts for a unique nature The theory of human nature developed in this book is a descriptive dynamic bottom up non essentialist naturalist theory Harris is well versed in classical philosophy and contemporary behavioral science He writes in a graceful open ended way that both educates and illuminates renewed interest in what it means to be human THE ENCYCLOPEDIA OF CHRISTIAN APOLOGETICS Edward D. Torrance and Eastern Orthodoxy Matthew Baker,Todd Speidell,2015-11-05 A properly ecumenical theology T F Torrance believed points the church to Christ as the only source and reality of its own unity Its only hope for unity must be discovered in him and unveiled to the church rather than pieced together and manufactured through ecumenical slogans and well meaning intentions Acting on this belief Torrance initiated an international dialogue of Reformed and Orthodox Churches which culminated when the World Alliance of Reformed Churches and the Orthodox Church issued a groundbreaking joint statement of agreement concerning the Trinity in 1991 a move beyond the filioque controversy that has divided East and West for a millennium The current volume on T F Torrance and Eastern Orthodoxy continues the theological and ecclesial work of the reintegration of Western and Eastern traditions on a classical patristic foundation *Math Mystic's Guide to*

Analytic Philosophy of Religion

James Franklin Harris, 2013-03-14 When Gene Long editor of Kluwer's Handbook of Contemporary Philosophy of Religion Series first invited me to write the volume on Analytic Philosophy of Religion I accepted with great enthusiasm My only explanation for that enthusiasm now is that I was younger and more naive at the time Soon after starting work on the volume my enthusiasm was dampened by the daunting magnitude of the task I began as a sprinter and quickly settled into the pace of a long distance runner Although I considered myself well read in the subject I soon discovered that I had a great deal of research to do to be confident that I had considered all of the major contributions to the various discussions issues and of religion As I read more and more problems found within analytic philosophy books and articles I realized that I had rushed into a territory already well trodden by the angels I am greatly impressed by the sophistication and subtlety of philosophical argument that characterize the different debates in contemporary analytic philosophy of religion This volume covers a vast amount of material I have endeavored to provide the fairest possible reading of different authors and in cases where I include my own critical evaluations and develop my own positions I have endeavored to provide the strongest possible interpretations of the positions I criticize

And Man Created God Shlomo Giora Shoham, 2011-08-08 And Man Created God presents a new

theory of mytho empiricism based on the mythological concepts of Claude Lévi Strauss and the structuralism of Jean Piaget. The whole nature of mythogenesis as the creative force linking history and transcendence is then elucidated. The corpus of myths in the books of Genesis and Exodus are presented in a new light and then compared with the Egyptian Mesopotamian and Greek mythologies to highlight the Judaic myths with the pagan contrast. *Copernicus, Darwin, and Freud* Friedel Weinert, 2009-03-12 Using Copernicanism Darwinism and Freudianism as examples of scientific traditions Copernicus Darwin and Freud takes a philosophical look at these three revolutions in thought to illustrate the connections between science and philosophy Shows how these revolutions in thought lead to philosophical consequences Provides extended case studies of Copernicanism Darwinism and Freudianism Integrates the history of science and the philosophy of science like no other text Covers both the philosophy of natural and social science in one volume **Carbon** Bernadette Bensaude-Vincent, Sacha Loeve, 2024-06-07 Carbon is much more than a chemical element it is a polymorphic entity with many faces at once natural cultural and social Ranging across ten million different compounds carbon has as many personas in nature as it has roles in human life on earth And yet it rarely makes the headlines as anything other than the villain of our fossil based economy feeding an addiction which is driving dangerous levels of consumption and international conflict and which left unchecked could lead to our demise as a species But the impact of CO₂ on climate change only tells part of the story and to demonize carbon as an element which will bring about the downfall of humanity is to reduce it to a pale shadow of itself In this major new history of carbon Bernadette Bensaude Vincent and Sacha Loeve show that this omnipresent element is at the root of countless histories and adventures through time thanks to its extraordinary versatility Carbon has a long and prestigious CV its work and achievements extend far beyond the burning of fossil fuels The fourth most abundant element in the universe and the second most abundant element in the human body carbon is the chemical basis of all known life Carbon chemistry has a long history with applications ranging from jewellery to heating underpinning developments in metallurgy textiles pharmaceuticals electronics nanoscience and green technologies A biography of carbon transgresses the boundaries between chemical and social existence between nature and culture forcing us to abandon the simplified image of carbon as the anti hero of human civilization and enabling us to see instead the great diversity of carbon's modes of existence With scientific precision and literary flair Bensaude Vincent and Loeve unravel the surprising ways in which carbon has shaped our world showing how unrecognizable the earth would be without it Uncovering the many hidden lives of carbon allows us to view our own with fresh eyes *Life Scientific Philosophy, Phenomenology of Life and the Sciences of Life* Anna-Teresa Tymieniecka, 2013-03-09 This collection brings to the public the fruits of the groundlaying work on the philosophy phenomenology of life presented in some 30 volumes of the *Analecta Husserliana* and inaugurates a new phase in philosophy phenomenology a truly radical turn As Tymieniecka in her introduction puts it the time is ripe to abandon the prejudices against empiria and set aside in a second position the epistemological constitutive criterion of validity and truth without

however abandoning it To the contrary recognising with our present culture the overwhelmingly superior validity of the pragmaticity test which science indubitably applies in its verification of technology philosophy phenomenology at last reaches the full significance of reality the fullness of the vital fact of life which comprises not only the works and enjoyment of the mind and the spirit but those of the bios and the cosmos too The full fledged dialogue with the hard core sciences opens up philosophy of life and the human creative condition draws together all the radiations of life into its field of inquiry Tymieniecka thus proposes a new mathesis universalis the dream of Leibniz and Husserl which can at least be fulfilled

Progress in Physics, vol. 1/2006 Dmitri Rabounski, Florentin Smarandache, Larissa Borissova, Progress in Physics has been created for publications on advanced studies in theoretical and experimental physics including related themes from mathematics The Measure of All Things Shlomo Giora Shoham, 2014-09-01 The Measure of All Things is the final volume in a trilogy about man as related to the genesis of the world to metaphysics and to the ontological vicissitudes of the human species This book reviews the condition of man and his relationship with the forces of evolution in both a biological and a spiritual sense It is therefore an innovative excursion into the present day arguments between the evolutionist and creationist regarding the fate of man **Natural Selection and Beyond** Charles Hyde Smith, George Beccaloni, 2010 Alfred Russel Wallace 1823 1913 was one of the late nineteenth century s most potent intellectual forces His link to Darwin as co discoverer of the principle of natural selection alone would have secured him a place in history but he went on to complete work entitling him to recognition as the father of modern biogeographical studies as a pioneer in the field of astrobiology and as an important contributor to subjects as far ranging as glaciology land reform anthropology and ethnography and epidemiology Beyond this many are coming to regard Wallace as the pre eminent field biologist collector and naturalist of tropical regions Add to that the fact that he was a vocal supporter of spiritualism socialism and the rights of the ordinary person and it quickly becomes apparent that Wallace was a man of extraordinary breadth of attention Yet his work in many of these areas is still not well known and still less recognized is his relevance to current day research almost 100 years after his death This rich collection of writings by more than twenty historians and scientists reviews and reflects on the work that made Wallace a famous man in his own time and a figure of extraordinary influence and continuing interest today
