Farid, 2012-12-06 Here is an up to date review of important new methods and results in anti idiotypes receptors and molecular mimicry It begins with a discussion of the theoretical background of the anti idiotypic network its role in the regulation of immune response and the physical characteristics of anti idiotypic antibodies It then goes on to explore many exciting applications in such areas as insulin action thyroid cell function the neurosciences cardiology virology pharmacology and reproduction [Anti-idiotypes, Receptors, and Molecular Mimicry](#)

Anti-idiotypes, Receptors, and Molecular Mimicry D. Scott Linthicum, 1988 *Neurocytochemical Methods* Andre Calas, Daniel Eugene, 2013-06-29 The great strides made in the field of morphological methods during the past decades have perhaps found their most spectacular expression in the functional exploration of the nervous system In comparison with other tissues nerve tissue displays three kinds of specificity structural because of the unique organization of the neuronal networks chemical as shown for example by the informative molecules exchanged between the nerve cells and of course functional thanks to the particular metabolic and electrophysiological characteristics of the neurons Although for a long time the structural properties of the nervous system were generally considered to constitute the only field to which morphological techniques could be applied we are to day justified in believing that they can also explore the nerve tissue through its specific chemical and functional aspects thanks to the development of immunocytochemistry and in situ hybridization to the elaboration of the deoxyglucose method to the use of voltage or ion sensitive dyes and to the progress made in the application of in vivo techniques like PET These methods have evolved so fast the technical and fundamental problems they raise are so numerous and stimulating and the importance of the complementary data they provide is so obvious that we thought it was a good time to organize a new meeting between distinguished specialists in the neurocytochemical field

Anti-idiotypic antibodies in cancer treatment Daniel Gomez, Ana

María Vázquez, Daniel F. Alonso, Amparo Macías, Actively induced immunotherapy is one of the most promising fields in cancer research and numerous approaches are being studied to design effective cancer vaccines Among the treatment strategies to develop an effective immune response against tumor associated antigens is the use of anti idiotypic mAb as antigen surrogates Several studies in animal models have demonstrated the efficacy of these vaccines for triggering the immune system to induce specific and protective immunity against tumors of different origin In fact anti idiotypic mAbs have been used successfully in cancer therapeutics to overcome the poor immunogenicity of some tumor associated antigens in particular those of non protein origin In some clinical trials including patients with different tumors anti Id specific humoral and or cellular responses following immunization were associated with improved clinical outcome This number of Frontiers will be dedicated to anti idiotypic antibodies and their use in cancer treatment Different article types will be considered original contributions case reports methods hypothesis and theory reviews historical etc **Revue roumaine de biochimie**, 1989
