Anticarcinogenesis And Radiation Protection 2:

Anticarcinogenesis and Radiation Protection 2 O.F. Nygaard,A.C. Upton,2012-12-06 The dramatic decrease in the incidence of stomach cancer in industrialized countries during the past 50 years which is yet to be fully explained and the observation that carcinogenesis in laboratory animals can be inhibited by antioxidants retinoids and caloric restriction among other influences challenge us to press on in the search for practical means to prevent cancer It is in relation to this goal that the studies summarized in this book have special significance This book is based on the invited and contributed papers presented at the Third International Conference on Anticarcinogenesis and Radiation Protection held on October 15 21 1989 in Dubrovnik Yugoslavia They cover a broad range of investigations into the mechanisms and inhibition of carcinogenesis In keeping with recent advances in our understanding of the importance of oncogenes and tumor suppressor genes in carcinogenesis many of the reports focus on mutations and related changes at the level of DNA At the same time however other reports deal with nutritional immunological endocrinological and epidemiological aspects In all the various reports address carcinogenesis and its inhibition at virtually every level of biological organization Included in this compendium are timely reviews of diverse and promising research strategies for cancer prevention as pursued by investigators in different parts of the world The Organizers of the Conference are grateful to the many scientists who have contributed to the volume as well as to the sponsors of the Conference without whose generous support this book would not have been possible

Anticarcinogenesis and Radiation Protection Peter Cerutti,2012-12-06 This book is based on the invited and contributed papers presented at the 2nd International Conference on Anticarcinogenesis and Radiation Protection held at the National Bureau of Standards Gaithersburg Maryland USA on March 8 12 1987 The conference documented developments that have taken place in areas that were addressed during the first conference in 1982 A number of new topics such as biological response modifiers were included because of their emerging relevance to anticarcinogenesis and radiation protection The organization of the material in this book does not follow the conference program rather we have attempted to provide a different sequence for didactic reasons The aim of the conference which is reflected in this book was to promote further development of mechanistic approaches to cancer prevention and treatment based on recent progress in molecular biology and free radical chemistry At the basis of carcinogenesis lie changes in the dynamics of growth and differentiation of specific cell subpopulations in the target tissue These changes are brought about by selective toxicity and modulation of gene expression that are induced by xenobiotic carcinogens and affected by physiological and genetic factors The book deals with oxidative stress and molecular damage caused by radiation and chemical pro oxidants and their role in carcinogenesis and it discusses mechanisms of deregulation of the expression of oncogenes and other genes involved in carcinogenic initiation and promotion Current Catalog National Library of Medicine (U.S.),1992 First multi year cumulation covers six years 1965 70

Boone, Gary J. Kelloff, 1992-08-20 The ultimate goal of cancer chemoprevention research and development is the identification of pharmaceutical or dietary constituents that will prevent cancer Cancer Chemoprevention presents the proceedings of a large workshop on cancer chemoprevention that highlights the latest knowledge in the field in addition to issues and ideas concerning future directions Retinoids sulfur compounds and a large number of many naturally occurring cancer inhibitors in the diet are discussed including green tea garlic constituents citrus fruit oils and beans and seeds containing protease inhibitors Compounds that may prevent the formation of carcinogens in food are covered and the mechanisms by which chemical or dietary agents produce cancer inhibitors are discussed Food Phytochemicals for Cancer Prevention II Chi-Tang Ho, Toshihiko Osawa, Robert T. Rosen, Mou-Tuan Huang, 1994-02-15 **Protease Inhibitors as Cancer Chemopreventive Agents** A.R. Kennedy, W. Troll, 2012-12-06 Protease inhibitors PIs are widely distributed in plants and animals and have a variety of functions which include preventing digestion of seeds by insects and modifying blood clotting in animals After it was noted that synthetic and natural inhibitors suppress two stage carcinogenesis and breast cancer extensive work investigating PIs as chemopreventive agents was started PIs are unique in that they interfere with cancer development in a variety of ways including suppression of oxygen radicals oncogenes and metastases Epidemiologic evidence supports their prevention of major human cancers in populations that consume foods containing them Their supervised use in humans is on the threshold of development The epidemiologic discovery of the importance of lentils and other seeds rich in PIs in preventing many human cancers allowed us to look at the action of PIs as chemopreventive agents as reviewed in Chapter I Fontham and Correa Chapter 2 Kennedy discusses the role of natural PIs e.g. the Bowman Birk inhibitor as anticarcinogens and the possible limitations of their use In Chapter 3 Kennedy the transformation of C3H10T1/2 cells caused by carcinogens and promoters is shown to be suppressed by PIs Bowman Chapter 4 relates the discovery of inhibitors in soybeans that are distinct from the Kunitz inhibitor and the occurrence of a similar inhibitor in peanuts and other legumes Chapter 5 Birk is an overview of PIs of plant origin and their role in human nutrition Acid Precipitation, 1993-07 *Nutrients and Cancer Prevention* Kedar N. Prasad, Frank L. Meyskens Jr., 2012-12-06 During the last 10 years the role of specific nutrients in cancer prevention and cancer treatment has been the subject of intense basic preclinical and clinical research At present the major focus of nutritional oncology is on the mechanisms of carcinogenesis and their modification by nutrients and on cancer prevention studies in animals and humans Some human epidemiological studies have confirmed the hypothesis developed on animals that there is an inverse relationship between

the intake and or level of 3 carotene vitamin A vita min E or vitamin C and the risk of cancer whereas others have shown no such relationship This is not unexpected since the protective effect of individual nutrients may be too small to be detected by epidemiological methodologies in which a single vitamin or mineral is considered as one variable Conclusive evidence regarding the role of nutrients in human cancer prevention will come from a well designed human intervention study using one or more nutrients in a population that has a high risk of developing cancer The involvement of specific nutrients in the regulation of protooncogene expression has just begun Also some of the results of human intervention trials are beginning to yield interesting results A large number of interna tional scientists from various disciplines including cell biology mo lecular biology nutritional oncology epidemiology and public health reviewed and discussed their most recent findings The following topics were emphasized 1 Mechanisms of carcinogenesis 2 **Folia Biologica** ,1995 **The Cumulative Book Index** ,1992 A world list of books in the English language *Radioprotectors* Edward A.
