Harnessing Marine Biodiversity for Novel Antimicrobial Agents Against Multidrug-Resistant Pathogens Guillermin Agüero-Chapin,Dany Domínguez Pérez,Yovani Marrero-Ponce,2025-06-26

Antimicrobial resistance AMR presents a critical challenge surpassing deaths from HIV and malaria with a forecast of 10

million annual deaths by 2050 Intensified by the COVID 19 pandemic and the prevalence of biofilm associated drug resistant bacteria this crisis has become a focal point for health research Government strategies are increasingly focusing on substantial investments and novel funding models Meanwhile academic institutions and small research private entities are emerging as significant players in developing antimicrobial solutions with higher efficacy reflecting a diversified approach to combating this escalating threat In this era where AMR poses a severe threat discovering new antimicrobials is crucial Recent studies have highlighted the potential of marine environments as a rich source of novel antimicrobial agents However despite these promising findings there remains a significant gap in fully understanding and harnessing the potential of marine derived compounds necessitating further investigation Infectious Diseases of the Respiratory Tract Michael E.
