Antioxidant Adaptation Its Role In Free Radical Pathology:

Antioxidant Adaptation Stephen A. Levine, Parris M. Kidd, 1985 **Mechanisms in Parkinson's Disease** Juliana Dushanova, 2012-02-08 Parkinson's disease PD results primarily from the death of dopaminergic neurons in the substantia nigra. Current PD medications treat symptoms; none halt or retard dopaminergic neuron degeneration. The main obstacle to developing neuroprotective therapies is a limited understanding of the key molecular mechanisms that provoke neurodegeneration. The discovery of PD genes has led to the hypothesis that misfolding of proteins and dysfunction of the ubiquitin proteasome pathway are pivotal to PD pathogenesis. Previously implicated culprits in PD neurodegeneration: mitochondrial dysfunction and oxidative stress may also act in part by causing the accumulation of misfolded proteins in addition to producing other deleterious events in dopaminergic neurons. Neurotoxin-based models have been important in elucidating the molecular cascade of cell death in dopaminergic neurons. PD models based on the manipulation of PD genes should prove valuable in elucidating important aspects of the disease such as selective vulnerability of substantia nigra dopaminergic neurons to the degenerative process.

Beyond Bypass and Chelation for Heart Problems and Cardiovascular Disease Jacob Swilling, 2004-11-01 This book describes factors leading to the state of degeneration, including depletion of minerals, poor nutrition, depleted level of oxygen, stress, environmental and chemical pollution. The book emphasizes that correcting these factors will remove risk of recurrence, hasten recovery, and the body will return to good health and enjoy longevity. An important message is that chelation is a more natural first option. However, unless the origin is corrected, the disease process continues, causing the condition to recur and present more serious health problems. This message leads to the importance of a lifestyle change, a new consciousness, of a self-help take charge, implementing a support program to maximize the outcome of chelation and return to good health.
