Antisense. From Technology to Therapy. Reimar Schlingensiepen, Wolfgang Brysch, Karl-Hermann Schlingensiepen, 1997-12      **Antisense-From Technology to Therapy: Lab Manual and Textbook R.** Schlingensiepen, W. Brysch, KH Schlingensiepen, 1997-03-21 The target specific inhibition of gene expression using antisense nucleic acids has developed into a key technology in molecular biology bio medical research and an entirely new field of pharmacotherapy Like the first conference in 1993 the Second International Conference on Antisense Nucleic Acids will provide a forum for basic researchers clinicians focusing on the application of antisense techniques in physiological settings and disease states Major topics are Drug Delivery Systems Pharmacology Targeting of sites of pathology and reports on the first clinical trials in virology and hematology      Antisense Technology, Part B: Applications , 1999-11-10 Antisense technology is the ability to manipulate gene expression within mammalian cells providing powerful experimental approaches for the study of gene function and gene regulation For example methods which inhibit gene expression permit studies probing the normal function of a specific product within a cell Such methodology can be used in many disciplines such as pharmacology oncology genetics cell biology developmental biology molecular biology biochemistry and neurosciences This volume will be a truly important tool in biomedically oriented research The critically acclaimed laboratory standard for more than forty years Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike Now with more than 300 volumes all of them still in print the series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences      **Transforming Growth Factor-Beta in Cancer Therapy, Volume II** Sonia B. Jakowlew, 2010-01-01 Transforming Growth Factor B in Cancer Therapy Volume II Cancer Treatment and Therapy The chapters in this volume confer an abundance of knowledge about the current state of our understanding of transforming growth factor B TGF B in cancer treatment and therapy Unlike several more traditional positive polypeptide growth factors that stimulate cellular proliferation the prototypical TGF B is now known to inhibit the growth of most normal cell types including those of epithelial and mesenchymal origin However there are examples of cell types that can be stimulated by TGF B under certain conditions TGF B also induces the accumulation of matrix molecules by stimulating their synthesis as well as inhibiting their degradation Moreover TGF B induces apoptosis of certain cell types thereby restricting their proliferation Overactivity of TGF has been linked to several diseases For instance the effect of TGF on matrix accumulation contributes to fibrotic conditions like glomerulonephritis lung fibrosis and liver cirrhosis 1 TGF has a very complicated role in cancer that is only beginning to be understood      Physicochemical and Biological Properties of Polyethylenimine Based Delivery Systems for Oligonucleotides and Ribozymes Carola Brus, 2004      **Bladder Disease** Anthony Atala, Debra Slade, 2012-12-06 In 1996 the National Bladder Foundation NBF was founded by a dedicated group of

physicians and researchers propelled by the urgent need to find better treatments for bladder disease Committed to increasing bladder disease research and to supporting its research community the NBF coordinates and sponsors the International Bladder Symposium IBS in Washington DC Now considered to be a premier scientific assembly the IBS brings together international leaders in bladder disease research to present and discuss their findings It is the only international conference where all areas of bladder disease research are exclusively covered and where bladder disease researchers are provided with a unique opportunity to share their results and theories IBS participants contributed the research papers included in this publication in 2000 and 2001 All substantial areas of bladder disease research are addressed including oncology and cellular biology neurophysiology neurogenic bladder and incontinence immunology inflammation and infection muscle matrix and obstruction and new frontiers and therapies of the bladder Assembled in one publication these papers and their findings demonstrate the high scientific caliber of the dedicated researchers in this field and the potential for significant discoveries in treatment options in the next decade
