## **Antiviral Therapy:**

*New Concepts of Antiviral Therapy* Elke Bogner, Andreas Holzenburg, 2007-01-31 Antiviral drugs are important tools for treatment or prevention of viral infections. These drugs were first used for monotherapy but nowadays combinations of antiviral agents are often part of a standard treatment as evidenced by e.g. HAART (highly active antiretroviral therapy). However, in almost every case of antiviral therapy, drug-resistant viruses appear. In addition, the low oral bioavailability, toxicity, and the number of severe side effects still pose significant problems. All of the latter issues limit the clinical usefulness and drive the need for improved antiviral strategies. These strategies include new drugs and targets, novel modes of action, vector-based treatments, and even the block of defined genes by inhibiting mRNA formation (siRNA). Highlights of this book include the discussion of novel promising compounds, concepts of therapy for new emerging viruses, managing drug resistance, new therapeutic strategies. This book presents an overview of the most recent developments. Contributions were carefully selected to ensure quality coverage by acknowledged experts over a wide spectrum and should prove to be of great value to students and serve as a compendium for R and D and educational professionals. **Practical Guidelines in**

**Antiviral Therapy** G.J. Galasso, C.A.B. Boucher, D.A. Cooper, D.A. Katzenstein, 2002-01-21 This text was developed with the practicing physician in mind; however, it will be of considerable interest to the virologist, pharmacologist, chemist, and all scientists interested in antiviral agents. Progress in the field of antiviral development is now moving rapidly, and there is hope that one day there will be successful treatment modalities for most viral diseases. This work contains contributions from experts around the world capturing worldwide practices. An online version providing the current status of antiviral research is planned for the near future. **Clinical Use of Antiviral Drugs** Erik de Clercq, 2012-12-06 Antiviral chemotherapy has come of age, and after an initial slow progress, the development of new antiviral agents has proceeded at a more rapid pace, and the perspectives for their clinical use have increased considerably. Now 25 years after the first antiviral assay, idoxuridine was introduced in the clinic; it is fitting to commemorate the beginning of the antivirals era. In its introductory chapter, B.E. Juel-Jensen touches on what may be considered as five of the most fundamental requirements of an antiviral drug: efficacy, relative non-toxicity, easy solubility, ready availability, and reasonable cost. Surely, the antiviral drugs that have so far been used in the clinic could still be improved upon as one or more of these five essential demands are concerned. How it all began is narrated by W.H. Prusoff. The first antiviral drugs to be used in humans were methisazone and idoxuridine; the former, which is now of archival interest in the prevention of smallpox, the latter, which was approved for clinical use in the United States in 1962 for the topical treatment of herpetic keratitis. In terms of potency, also because of solubility reasons, idoxuridine has been superseded by trifluridine in the topical treatment of herpes simplex epithelial keratitis. H.E. Kaufman did not find trifluridine or acyclovir effective in the treatment of deep stromal keratitis or iritis, and he reckons that other antiviral drugs, i.e. bromovinyldeoxyuridine, would not be effective either. Antiviral Drugs Patrick Arbuthnot, 2012-03-14 The articles that

appear in Antiviral Drugs Aspects of Clinical Use and Recent Advances cover several topics that reflect the varied mechanisms of viral disease pathogenesis and treatment Clinical management and new developments in the treatment of virus related diseases are the two main sections of the book The first part reviews the treatment of hepatitis C virus infection the management of virus related acute retinal necrosis the use of leflunomide therapy in renal transplant patients and mathematical modeling of HIV 1 treatment responses Basic research topics are dealt with in the second half of the book New developments in the treatment of the influenza virus the use of animal models for HIV 1 drug development the use of single chain camelid antibodies against negative strand RNA viruses countering norovirus infection and the use of plant extracts to treat herpes simplex virus infection are described The content of the book is not intended to be comprehensive but aims to provide the reader with insights into selected aspects of established and new viral therapies *Successful Strategies for the Discovery of Antiviral Drugs* Manoj C. Desai, Nicholas A. Meanwell, 2013 This volume will be aimed at medicinal chemistry and emerging drug discovery scientists **Antiviral Drugs** Wieslaw M. Kazmierski, 2011-08-23 This book focuses on new small molecule approaches to combat viral infections The chapters describe the discovery and development from bench through the clinic of relatively recently approved antiviral drugs and compounds in advanced clinical development Organized by a virus such as HIV HCV RSV influenza HBV and CMV and written by top academic and industrial authorities in the field the book provides a unique opportunity to study understand and apply discovery and development principles and learning without the need for an individual to research analyze and synthesize all immense sourcing references Topics showcase challenges and solutions of issues encountered offering tremendous experience accumulated over many years of research that will be particularly useful to basic and bench scientists as well as clinicians as they continue discovering and developing new drugs and therapies **MYCDCGP - Guidelines for the Management of Adult HIV Infection With Antiretroviral Therapy** Bahagian Kawalan Penyakit, Kementerian Kesihatan Malaysia, [Consolidated guidelines on person-centred viral hepatitis strategic information](#) World Health Organization, 2024-04-09 This publication summarizes the approach proposed by WHO to collect analyse report disseminate and use strategic information on viral hepatitis at the subnational national and global levels These guidelines strengthen person centred monitoring with a priority for indicators that support person centred health services the core prevention diagnosis and treatment interventions The guidelines describe the use of strategic information at various stages of the response in the context of strengthening broader health information systems Strategic information can be defined as data collected at all service delivery and administrative levels to inform policy and programme decisions The guidelines recommends the stepwise guidance to build country health information systems so countries use data to strengthen the scaling up of viral hepatitis programmes The key new additions to the guidelines are an updated strategic information framework for chronic viral hepatitis B a new section on person centred data monitoring for chronic viral hepatitis B a stepwise recommendation for strengthening country surveillance for viral hepatitis and
