Blum, Seward B. Rutkove, 2007-09-26 With the growth of combined clinical neurophysiology fellowship training programs and their corresponding pan physiology board examinations there has been an increased need for educational materials that span the range of clinical neurophysiology topics The Clinical Neurophysiology Primer aims to meet this need by providing a broad and intentionally basic treatment of the most central topics within clinical neurophysiology The Clinical Neurophysiology Primer initially took shape within the clinical neurophysiology sections at Beth Israel Deaconess Medical Center and Rhode Island Hospital as an outgrowth of their fellowships didactic lecture series Faculty and trainees at these and affiliated teaching hospitals participate in a series of lectures over the course of the academic year designed to acquaint trainees with the elements of clinical neurophysiology supplementing their clinical experiences We hope that this primer will prove valuable to others as a companion book

intended for clinical neurophysiology fellows and neurology residents to be used in conjunction with such a program of lectures

Clinical Assessment of the Autonomic Nervous System Satoshi Iwase,Junichiro Hayano,Satoshi Orimo,2016-09-08 This book describes newly developed methods of assessing the autonomic nervous system Up to date information on microneurographic analysis of human cardiovascular and thermoregulatory function in humans heart rate variability and ¹³¹I metaiodobenzylguanidine MIBG scintigraphy are provided Microneurography which was originally developed as a technique to analyze the afferent muscle spindle came to be used to analyze sympathetic nerve activity in the mid 1980s In the twenty first century this technique has become prevalent all over the world especially in investigating the pathophysiology of human cardiovascular function It is also now used in researching human thermoregulatory function Heart rate variability is another valuable tool in investigating the current status of human vagal function and in predicting future cardiovascular disease MIBG is also used to assess cardiac noradrenergic function especially decreases associated with Parkinson s disease Lewy body disease and multisystem atrophy Overviews of recent advances in these three important assessments are provided by leading experts Clinical Assessment of the Autonomic Nervous System is a useful resource for neurologists and researchers of clinical neurophysiology

Psychopharmacological Agents Volume II provides an overview of the state of knowledge in psychopharmacological agents. The organization of this book is generally based on a treatment of the major classes of psychopharmacological agents in separate chapters. To the extent allowed by the diverse nature of the subject matter, each chapter covers the history, synthesis, pharmacological activity, in vivo distribution, and metabolic fate, analytical methods, and briefly the clinical uses of each class of psychopharmacological agents. This volume includes a chapter on the butyrophenones, one on miscellaneous psychopharmacological agents, and one on the biochemical basis of mental disease. The last named chapter is not exhaustive but is merely meant to be illustrative of the currents of research that one finds in this field. The appendices have been used as a vehicle for collecting part of the part of the flood of reports that could not be included in either of the two volumes. Although written primarily for medicinal chemists and pharmacologists, researchers in other disciplines such as clinical investigation, biochemistry, analytical chemistry, etc. may also find material of interest here.

Concise Clinical Pharmacology
Ben Greenstein, Adam Greenstein, 2007. This textbook provides a concise and thorough introduction to clinical appraisal of pharmacology from which students can gain a rapid understanding of individual topics within the discipline and from which they can review and revise certain topics before exams. This is achieved through self-contained topics with concise text on the left and a diagram on the right to elaborate and reinforce the text. The text has a strong clinical focus and in the main sections will relate to particular body systems or the therapy of a disease class, e.g., cancer. Pharmacological principles and mechanisms are covered, but the main focus is on the therapeutic use of the drugs. Sections will cover basic principles of pharmacology, specialized pharmacology, complementary pharmacology, and the vitamins. The text will be written primarily for pharmacy students but will also be of interest to clinical medical students. The strong clinical focus should also appeal to practitioners.
