Lessons from the Clean Air Act Ann Carlson, Dallas Burtraw, 2019-05-09

Examines the successes and failures of the Clean Air Act in order to lay a foundation for future energy policy *California Greenin'* David Vogel, 2018-05-01 A political history of environmental policy and regulation in California from the Gold Rush to the present Over the course of its 150 year history California has successfully protected its scenic wilderness areas restricted coastal oil drilling regulated automobile emissions preserved coastal access improved energy efficiency and most recently addressed global climate change How has this state more than any other enacted so many innovative and stringent environmental regulations over such a long period of time The first comprehensive look at California's history of environmental leadership *California Greenin'* shows why the Golden State has been at the forefront in setting new environmental standards often leading the rest of the nation From the establishment of Yosemite America's first protected wilderness and the prohibition of dumping gold mining debris in the nineteenth century to sweeping climate change legislation in the twenty first David Vogel traces California's remarkable environmental policy trajectory He explains that this pathbreaking role developed because California had more to lose from environmental deterioration and more to gain from preserving its stunning natural geography As a result citizens and civic groups effectively mobilized to protect and restore their state's natural beauty and importantly were often backed both by business interests and by strong regulatory authorities Business support for environmental regulation in California reveals that strict standards are not only compatible with economic growth but can also contribute to it Vogel also examines areas where California has fallen short particularly in water management and the state's dependence on automobile transportation As environmental policy debates continue to grow more heated *California Greenin'* demonstrates that the Golden State's impressive record of environmental accomplishments holds lessons not just for the country but for the world *Smoke and Mirrors* E. Melanie Dupuis, 2004-07

A history of the politics of air pollution *The Age of Smoke* Frank Uekötter, 2009-02-15 In 1880 coal was the primary energy source for everything from home heating to industry Regions where coal was readily available such as the Ruhr Valley in Germany and western Pennsylvania in the United States witnessed exponential growth yet also suffered the greatest

damage from coal pollution These conditions prompted civic activism in the form of anti smoke campaigns to attack the unsightly physical manifestations of coal burning This early period witnessed significant cooperation between industrialists government and citizens to combat the smoke problem It was not until the 1960s when attention shifted from dust and grime to hazardous invisible gases that cooperation dissipated and protests took an antagonistic turn The Age of Smoke presents an original comparative history of environmental policy and protest in the United States and Germany Dividing this history into distinct eras 1880 to World War I interwar post World War II to 1970 Frank Uekoetter compares and contrasts the influence of political class and social structures scientific communities engineers industrial lobbies and environmental groups in each nation He concludes with a discussion of the environmental revolution arguing that there were indeed two environmental revolutions in both countries one societal where changing values gave urgency to air pollution control the other institutional where changes in policies tried to catch up with shifting sentiments Focusing on a critical period in environmental history The Age of Smoke provides a valuable study of policy development in two modern industrial nations and the rise of civic activism to combat air pollution As Uekoetter s work reveals the cooperative approaches developed in an earlier era offer valuable lessons and perhaps the best hope for future progress Time Strategies, Innovation, and Environmental Policy

Christian Sartorius, Stefan Zundel, 2005-01-01 Timeliness is a particularly relevant issue in the field of innovation and diffusion research This book originates from the observation that innovations are time critical and asks the question when and how do windows of opportunity for new environmental technologies emerge and why do they disappear again By analysing these windows of opportunity and possible time strategies for innovation policies this book represents a highly topical contribution to a front line issue in environmental and innovation research The theoretical framework is applied to well investigated and highly informative case studies to produce an interesting insightful and coherent volume Joseph Huber Martin Luther University Halle Germany This book is the first attempt to systematically introduce the aspect of time into economic and environmental innovation policy The authors demonstrate how windows of opportunity for technological innovations emerge and also explain how they can be identified and effectively exploited Technological innovations are widely considered as an opportunity to realise a double dividend protect the environment and increase profits by introducing a more sustainable technology However intervention by the state is often needed to overcome the competitive disadvantage caused by externalities path dependency and lock in The authors provide extensive evidence that this resistance to technological change is subject to substantial temporal variation They argue that it is economically and politically sensible to identify periods of time in which resistance is weakest and to exploit these windows of opportunity whenever and wherever they occur They also highlight how time strategies for innovation policy can involve the preparation and creation of windows which do not yet exist Throughout the book they use an array of varied and interesting case studies to confirm and illustrate their theoretical findings These address issues such as CFC phase out the lean burn engine versus the catalytic converter

ecological alternatives to chemical pesticides and the zero emission vehicle mandate in California By exploring the relationship between time strategies and technological change this book will undoubtedly lead to a more efficient and sustainable innovation policy It will be required reading for academics researchers and policymakers working in the fields of environmental innovation sustainability technology policy and political science Transport Policy and the Environment

David Banister,2002-09-11 There is currently considerable concern with limiting the growth of transport demand the use of resources and related pollution This book makes a major contribution to the debate on transport and the environment and is likely to become a benchmark against which new research will be developed Transport Policy and the Environment presents for the first time the results of extensive research quantifying the contribution of transport to environmental problems assessing the options for resolving those problems investigating the conflicts arising from policy implementation developing new and better methods of data collection and analysis It brings together the results of a major research programme funded by the UK Economic and Social Research Council on Transport and the Environment and provides a clear view on current policy It is the major contribution that UK research has made to the debate and provides the first set of substantive results on the effectiveness of policy and the means by which the impact can be measured and assessed **Punctuated Equilibrium**

and the Dynamics of U.S. Environmental Policy Robert Repetto,2008-10-01 Although many environmental policy issues remain deadlocked for decades with little movement sometimes breakthroughs occur abruptly Why do deadlocks persist Why do major policy shifts occur infrequently Is it possible to judge when policies are ripe for change This book presents new empirical evidence that the punctuated equilibrium theory of policy dynamics fits the facts of environmental policy change and can explain how stable policies can suddenly unravel in discontinuous change The distinguished contributors to the volume apply the theory to a wide range of important environmental and resource issues and assess case histories in water forestry fisheries public lands energy and climate some of which resulted in breakthroughs others in stalemate They offer insights into the political conditions and tactics that are likely to produce these disparate outcomes Every professional activist and student concerned with promoting or resisting change in environmental and natural resources policies will find this up to date book an invaluable guide **Metropolitan Growth Planning in California, 1900-2000** Elisa Barbour,2002

Direct Action in British Environmentalism Brian Doherty,Matthew Paterson,Benjamin Seel,2002-11-01 Direct action has become a key part of the strategy of the radical environmental movement since the early 1990s used to address issues such as road building and car culture genetically modified foods consumerism and global finance institutions It has helped shape the political climate and has transformed the way people view political action undermining the assumption that the power of politicians and big businesses cannot be contested At the same time it is highly controversial often illegal and partly due to its move towards greater militancy may be included in new Prevention of Terrorism legislation Direct Action in British Environmentalism charts and analyses the nature and impact of this new wave of direct action The contributors approach the

phenomenon from a wide variety of perspectives and disciplines and present data concerning both the quantity and type of recent environmental protest and the sociological and organisational features of those performing it Subjects covered include the history of the movement and its influence on contemporary activism the identities and new tribalism of eco warriors the reaction of the mass media the impact of direct action on mainstream politicians and policy the strategies and tactical innovations which underlie direct action Direct Action in British Environmentalism is the fullest scholarly analysis yet available of this phenomenon It is essential reading for students of Politics and Environmental Studies as well as all those interested in the development and impact of direct action in environmentalism *Searching the Law - The States* Francis R Doyle, 2022-11-14 This revised two volume set reproduces the easy to use logically organized format of *Searching the Law* for each of the 50 U S states Arranged by state and by topic within each state it features a complete list of all the legal research materials available for each state jurisdiction thousands of citations to the legal literature of each state materials applicable to more than one topic listed under each topic repeated listings under each state and topic where they apply and author title publisher format and the latest known supplement for each citation *Searching the Law The States* is the companion text to *Searching the Law Together* the sets form one of the most comprehensive logical legal reference sources available Published under the Transnational Publishers imprint The print edition is available as a set of two volumes 9781571052872 Don't Breathe the Air Scott Hamilton Dewey, 2000 With the menace of smog hanging over an increasing number of American cities in the 1960s Clean Air became a rallying cry for a new environmentalism Citizen activists rallied passionately to force state and local governments to address problems that threatened human health and even survival In *Don't Breathe the Air* Scott H Dewey traces the history of air pollution control efforts focusing on the decade of the sixties and describes how local efforts helped create both the modern environmental movement and federal environmental policy Early in the fight against air pollution activists recognized the need for intergovernmental solutions Because air was mobile no single jurisdiction could address problems alone Dewey has chosen three case studies involving different sources of air pollution and different configurations of governments to discover how jurisdictional issues affected environmental organization and the ability to clean up the air First Dewey looks at Los Angeles arguably the birthplace of modern air pollution Because much of the city's air pollution was automobile related Los Angeles had to enlist help from the State of California to regulate both the industry and car owners Relatively speaking Los Angeles was a success story one that set important precedents and illustrated a pattern of local concerns entailing action in a larger arena Dewey then turns to New York City a city plagued by air pollution problems that involved more than one state and required regional action In its comparative lack of success in dealing with its atmospheric woes compounded by the pollution descending on it from neighboring New Jersey New York was more typical of the overall national pattern than was Los Angeles Finally Dewey examines central Florida where a rural agricultural area suffered from severe industrial air pollution that required a multi jurisdictional solution and a confrontation with influential

phosphate manufacturers that all levels of government were long reluctant to tackle Don't Breathe the Air is a comprehensive look at the role of air pollution and citizen activism during the rise of environmentalism in the post World War II United States It clearly lays out the issues and strategies that prepared the way for the federal clean air legislation of the 1970s **Air Pollution, the Automobile, and Public Health** Sponsored by The Health Effects Institute, 1988-01-01 The combination of scientific and institutional integrity represented by this book is unusual It should be a model for future endeavors to help quantify environmental risk as a basis for good decisionmaking William D Ruckelshaus from the foreword This volume prepared under the auspices of the Health Effects Institute an independent research organization created and funded jointly by the Environmental Protection Agency and the automobile industry brings together experts on atmospheric exposure and on the biological effects of toxic substances to examine what is known and not known about the human health risks of automotive emissions Deregulation in the European Union Ute Collier, 1998 This volume has its roots in a workshop on Deregulation and the Environment organised by the Working Group on Environmental Studies WGES of the European University Institute in Florence in May 1996 P x **Congressional Record** United States.
