**Development Second World War Legacy** William J. Norton, 2021-12-02 This volume focuses on the influence of America's Second World War aviation development and experience subsequent aviation technological advances and world events in shaping American choices in military aircraft and associated weapons development during the few years following the war. It shows how air warfare weapons from the last conflict were carried forward and altered how new systems evolved from these and how the choices fared in the next war, Korea. The period was one of remarkable progress in a short span of time via a great many aircraft and weapons programs and associated technological progress. These systems were of immense importance, influencing and growing the engineering production and operational capabilities to be exploited for the next generation of weapons that soon followed. Emphasized is the innovative features or new technology and how these contributed to advancing American military aviation, influencing the evolution of follow-on models or types. Included are military prototype, experimental, and research aircraft that are equally important in understanding the history of American aircraft development. Combat employment progress and equipment adaptation during the Korean Conflict is then highlighted. Tabulated characteristics are provided of those aircraft that entered production or represented significant technological advances influencing others that follow.

**B-17 flying fortress**, 1974 [Air Pictorial](#), 1989 **The Boeing B-17** Ben Skipper, 2023-02-16 The B-17 Flying Fortress, a term coined by a Seattle Daily Times report in 1935, was a quantum leap in offensive air power. Designed for a nation whose foreign policy was still deeply isolationist and an Air Corps whose in-service bomber fleet was dominated by biplanes, the B-17, with its four engines, huge wingspan, enviable payload, almost double that of contemporary bombers, and all-metal construction, ushered in a new age. For an aircraft of its size and relative complexity, the B-17's design and development was heralded by a host of key innovations. With the unveiling of the XB-15, Boeing 294, including engine access, crawl ways, enhanced endurance, and massive load capacity. Within a year, the Y1B-17 or Model 299 had refined ideas from the XB-15 and produced a sleek, attractive-looking aircraft. By 1937, all testing had been completed, and the first 12 aircraft were delivered to the 2nd Bombardment Group for assessment. At the start of the Second World War, the still new B-17 was just beginning to fill the ranks of US bomber squadrons, and by early 1941, the B-17C, arguably the fastest B-17 built, was flying in RAF Service. The B-17 was soon flying over Europe with the newly created United States Army Air Forces, as well as taking the fight to the Japanese in the Pacific and to the Axis in the Mediterranean. When production of the B-17 was halted in April 1945, at which point the B-17 had been supplanted by the B-24 in the Pacific, over 12,700 B-17s had been built. The type would bow out as a bomber not long after the war's end, though a few would soldier on as SB-17 air-sea rescue aircraft. Ultimately, the B-17 would fly with 26 countries. This *Flight Craft* title offers the modeler an exciting selection of photographs, illustrations, and showcase examples to help build their own version of this icon of the skies.

**Aerospace Historian**, 1983 **Aircraft, Engine, and Missile Maintenance at Tinker Air Force Base, Oklahoma, 1942--1992** Donald W. Klinko, 1992 *Fortnight of Infamy* John Burton, 2013-09-23 While America was preoccupied with the aftermath

of Pearl Harbor an even greater tragedy was unfolding across Southeast Asia From Wake Island to Burma the Empire of Japan opened the largest front in the history of warfare an aircraft driven invasion of colonial possessions throughout the Far East that crumbled the entire Western imperial legacy of the nineteenth century Events during the first two weeks of battle set the stage for the greatest military defeats America and Great Britain would suffer during any conflict This book offers the first comprehensive overview of the collapse of Allied air forces during the period between December 8 and 24 1941 Written for a wide audience it gives readers both a cockpit view of the desperate actions that took place and an understanding of why such heavy losses occurred The narrative account includes enough detail and analysis to hold the interest of serious students of Pacific War aviation and enough exciting descriptions of air combat to attract those with little knowledge of the subject Explaining how and why the Japanese were able to win a quick victory John Burton points to U S failures in the concepts for employment of airpower and a significant underestimation of Japanese air mindedness and aviation capabilities failures that resulted in the loss or surrender of more than 200 000 troops at Bataan and Singapore
