Autoantibodies and Autoimmunity Kenneth Michael Pollard, 2006-05-12 This is the first book to address all aspects of the biology of autoantibodies in a single volume including a discussion of immunology experimental models clinical aspects and the use of autoantibodies as probes in molecular and cellular biology The editor currently professor at the W M Keck Autoimmune Disease Center of The Scripps Research Institute has assembled an all star team of authors to report on the latest research technologies and applications Following an introductory chapter the book goes on to cover such topics as cellular mechanisms of autoantibody production clinical and diagnostic usefulness in human disease and animal models used to study the elicitation of autoantibodies The whole is rounded off with a look at future perspectives With its comprehensive coverage this volume will appeal not only to immunologists and clinicians but also to cell and molecular biologists

Immunotoxicology And Immunopharmacology H Dean Jack, 1994-06-30 The second edition of this text has been revised and refocused to reflect the transformation of immunotoxicology from a subdiscipline of toxicology to an independent area of research that can best be described as environmental immunology New chapters discuss the role of immune mediators in liver lung and skin toxicity in regulating chemical metabolizing enzymes and in the immunosuppression produced by ultraviolet light More emphasis is placed on the clinical consequences of immunotoxicity as well as the interpretation of experimental data for predicting human health risk The second edition is divided into three major sections immunosuppression autoimmunity and hypersensitivity This new organization of the text allows for a more thorough treatment of these phenomena with greater attention to test methods theoretical considerations and clinical implications The book includes many chapters on specific environmental agents therapeutic drugs biological agents and drugs of abuse as well as on immune mediated toxicity in specific organ systems

Next Generation Therapeutic Modality to Cure Autoimmune Diseases Ce Wang, Guobao Chen, Qi Wan, Feng Dong, Timothy Radstake, Asif Amin Dar , Sergio Piñ Piñeiro, 2025-08-07

Autoimmune diseases represent a significant medical challenge where the body s immune system mistakenly attacks its own tissues leading to chronic inflammation and serious health ramifications The traditional treatment regime generally suppresses the immune system broadly offering only symptomatic relief and increasing susceptibility to infections However recent strides in understanding the immune system coupled with breakthroughs in technology have sparked a new wave of treatments aimed at specific pathogenic pathways to restore balance and potentially offer a lasting cure without compromising overall immune function This research topic aims to explore the spectrum of innovative therapies that specifically target critical components driving disease progression in autoimmune conditions We aim to highlight recent advancements in technologies such as CAR T therapies targeted protein degradation and nucleotide based therapies which hold the promise of drug free remission and potential cures by focusing precisely on pathogenic cells without overall immune suppression

Danger Signals Triggering Immune Response and Inflammation Abdulraouf Ramadan, Walter G. Land, Sophie Paczesny, 2017-09-18 The immune system detects danger through a series of what we call pathogen associated molecular patterns PAMPs or damage associated molecular pattern molecules DAMPs working in concert with both positive and negative signals derived from other tissues PAMPs are molecules associated with groups of pathogens that are small molecular motifs conserved within a class of microbes They are recognized by Toll like receptors TLRs and other pattern recognition receptors A vast array of different types of molecules can serve as PAMPs including glycans and glycoconjugates Bacterial lipopolysaccharides LPSs endotoxins found on the cell membranes of Gram negative bacteria are considered to be the prototypical class of PAMPs LPSs are specifically recognized by TLR4 a recognition receptor of the innate immune system Other PAMPs include bacterial flagellin recognized by TLR5

lipoteichoic acid from Gram positive bacteria peptidoglycan and nucleic acid variants normally associated with viruses such as double stranded RNA recognized by TLR3 or unmethylated CpG motifs recognized by TLR9 DAMPs also known as alarmins are molecules released by stressed cells undergoing necrosis that act as endogenous danger signals to promote and exacerbate the immune and inflammatory response DAMPs vary greatly depending on the type of cell epithelial mesenchymal etc and injured tissue Some endogenous danger signals include heat shock proteins HMGB1 high mobility group box 1 reactive oxygen intermediates extracellular matrix breakdown products such as hyaluronan fragments neuromediators and cytokines like the interferons IFNs Non protein DAMPs include ATP uric acid heparin sulfate and DNA Furthermore accumulating evidence supports correlation between alarmins and changes in the microbiome Increased serum or plasma levels of these DAMPs have been associated with many inflammatory diseases including gastric and intestinal inflammatory diseases graft versus host disease GVHD sepsis and multiple organ failure allergies particularly in the lungs atherosclerosis age associated insulin resistance arthritis lupus neuro inflammation degeneration and more recently in tumors which is particularly interesting with the emergence of immunotherapies Therapeutic strategies are being developed to modulate the expression of these DAMPs for the treatment of these diseases A vast number of reviews have already been published in this area thus in an effort to not duplicate what has already been written we will focus on recent discoveries particularly in disease models that are epidemic in Western society intestinal chronic inflammatory diseases including GVHD and its relationship with the microbiome chronic infectious diseases allergies autoimmune diseases neuroinflammation and cancers We will also focus on the basic cellular roles of macrophages T cells and B cells This research topic brings together sixteen articles that provide novel insights into the mechanisms of action of DAMPS alarmins and their regulation and subsequent immunologically driven responses
