## Another Gravity:

Gravity Assist, 1985      Gravity's End Adrian Ferruelo, 2025-05-26 One day Earth's gravity begins to fade At first it's subtle a floating pen a hovering glass of water but soon unsecured objects vehicles and even people are pulled into the sky As society collapses into chaos a diverse group of characters including a physicist a survivalist and a government official must race against time to understand the phenomenon and save what remains of humanity A gripping blend of science fiction and apocalyptic thriller this novel explores the fragility of civilization and the resilience of the human spirit in the face of an unimaginable crisis

Gravity's Kiss Harry Collins, 2018-03-02 A fascinating account written in real time of the unfolding of a scientific discovery the first detection of gravitational waves Scientists have been trying to confirm the existence of gravitational waves for fifty years Then in September 2015 came a very interesting event as the cautious subject line in a physicist's email read that proved to be the first detection of gravitational waves In *Gravity's Kiss* Harry Collins who has been watching the science of gravitational wave detection for forty three of those fifty years and has written three previous books about it offers a final fascinating account written in real time of the unfolding of one of the most remarkable scientific discoveries ever made Predicted by Einstein in his theory of general relativity gravitational waves carry energy from the collision or explosion of stars Dying binary stars for example rotate faster and faster around each other until they merge emitting a burst of gravitational waves It is only with the development of extraordinarily sensitive highly sophisticated detectors that physicists can now confirm Einstein's prediction This is the story that Collins tells Collins a sociologist of science who has been embedded in the gravitational wave community since 1972 traces the detection the analysis the confirmation and the public presentation and the reception of the discovery from the first email to the final published paper and the response of professionals and the public Collins shows that science today is collaborative far flung with the physical location of the participants hardly mattering and sometimes secretive but still one of the few institutions that has integrity built into it

*Ornithologies of Desire* Travis V. Mason, 2013-09-03 *Ornithologies of Desire* develops ecocritical reading strategies that engage scientific texts field guides and observation Focusing on poetry about birds and birdwatching this book argues that attending to specific details about the physical world when reading environmentally conscious poetry invites a critical humility in the face of environmental crises and evolutionary history The poetry and poetics of Don McKay provide *Ornithologies of Desire* with its primary subject matter which is predicated on attention to ornithological knowledge and avian metaphors This focus on birds enables a consideration of more broadly ecological relations and concerns since an awareness of birds in their habitats insists on awareness of plants insects mammals rocks and all else that constitutes place The book's chapters are organized according to apparatus that is science as ecocritical tool flight and song Reading McKay's work alongside ecology and ornithology through flight and birdsong both challenges assumptions regarding humans place in the earth system and celebrates the sheer virtuosity of lyric poetry rich with associative as well as scientific details The

resulting chapters interchapter and concordance of birds that appear in McKay's poetry encourage amateurs and specialists birdwatchers and poetry readers to reconsider birds in English literature on the page and in the field **Gravity Cause**

**Discoveries in Astronomy** P.J.Tomlin, 2012-10-12 This book presents what are possibly the greatest advances in astronomy and physics for years. It quantifies the force responsible for the expansion of the universe and describes its source. It identifies the greatest destructive mechanism in the universe. The enigmas behind the Hubble constant were resolved and this led to all the discoveries. The mysteries behind dark matter and dark energy are solved. The cause of all solar energy including gravitational and radiant energy is identified. Surprisingly, hydrogen fusion is found to be responsible for the sun's remarkable prolonged stability, but it is an impossible source of surplus energy. The most unexpected finding was that time has an unusual property, one that is responsible for much of the behaviour of the universe. Also uncovered was an inverse relationship between time and mass. Another finding was the greatest catastrophe to befall the earth, with after effects that we still feel today, such as shifting plate tectonics, tsunamis and earthquakes, and why the Pacific Ocean is so deep. That catastrophe led to Snowball Earth. But it also eventually caused the oxygenation of earth's atmosphere and the emergence of life. Also found were why Jupiter is so hot compared with its surroundings and what drives its equatorial storms. Another discovery was the mechanism responsible for Saturn's marvellous ring system. Also identified within that ring system was the physics behind the most spectacular sight in the solar system. But there are many other discoveries, such as that the theory of the Big Bang must be wrong, the quantification of gravitational energy and so on. This book should do to Astronomy what Darwin's book *The Origin of Species* did to biology.
