Atlas anatomoclinique en ophtalmologie

Marc Putterman, 2024-10-08 La collection Elsevier Atlas fait le point sur une pathologie ou une technique en s'appuyant sur une iconographie riche et exemplaire expliquée et commentée par le texte. Il est un organe complexe. La pathologie oculaire orbitaire est restée marginale dans les services hospitaliers ou dans les cabinets libéraux. Cette pathologie est pourtant fondamentale que cela soit pour le pathologiste ou pour l'ophtalmologiste. En effet, l'interprétation des images histopathologiques ou cytologiques en fonction du contexte clinique biologique ou de l'orientation macroscopique spécifique de la pièce opératoire facilite un diagnostic précis et permet de proposer le traitement le plus adapté. Cela est d'autant plus important qu'un certain nombre de problèmes orbitooculaires sont de petite taille et qu'il est parfois difficile de réopérer les patients ou de réitérer les problèmes. L'examen extemporané peut être aussi proposé dans certaines pathologies orbitaires ou palpébrales. Cet atlas anatomoclinique reflète l'état actuel des connaissances en anatomie pathologique oculaire et orbitaire. Il est divisé en deux grandes parties : l'une consacrée aux pathologies de l'adulte et l'autre celles rencontrées en pédiatrie. Compilant près de 600 images, il aborde de très nombreuses pathologies palpébrales conjonctivales orbitaires de la glande lacrymale et de la voie lacrymale sans oublier les lésions intraoculaires cornéennes choroïdiennes rétinienues etc incluant les aspects anatomopathologiques l'approche clinique et semiologique ainsi que les techniques de diagnostic les plus récentes en immunohistochimie en biologie moléculaire et en génétique. L'ouvrage pratique et très richement illustré est destiné aux pathologistes ophtalmologistes et onco ophtalmologistes expérimentés mais aussi aux jeunes praticiens curieux de découvrir cette spécialité et peut leur encourager d'intégrer et développer cette pathologie au sein de leur service. Cet atlas leur permettra d'acquiescer des connaissances approfondies sur les pathologies oculaires et orbitaires.

POINTS CLÉS Nombreuses illustrations notamment histopathologiques mais aussi cliniques. Grande variété de pathologies palpébrales orbitaires cornéennes etc. Marc Putterman est anatomo-cytopathologiste. Praticien Hospitalier à l'Hôpital Necker Enfants malades et à l'Hôpital National des 15-20. Expert près la cour d'appel de Paris.
