

Addressing the Mental Health Impacts of the Alt-Right Pipeline in Global Youth

Aani Nagaiah

Abstract

In recent years, the alternative right (alt-right) has strategically targeted adolescents worldwide for online radicalization and recruitment, with mounting concerns about impacts on mental health. This paper applies a critical medical anthropology perspective to examine the detrimental cognitive and psychological effects of alt-right indoctrination on global youth populations. Analysis of key research reveals that immersion in alt-right ecosystems frequently engenders increased anxiety, anger, susceptibility to conspiracy theories, social isolation, and dysfunctional thinking patterns. Attempts to exit far-right groups may result in further trauma from community severance and "de-radicalization burnout." These factors elevate risks for mood disorders, addiction issues, and suicide. Integrating concepts from medical anthropology suggests that radicalization constitutes a form of structural violence shaped by dominant cultural forces like white male hegemony. Solutions encompass preventative education, early intervention, trauma-informed rehabilitation programs, efforts to remedy root causes of radicalization like lack of opportunity, and policy initiatives to dismantle oppressive sociocultural systems. With nuanced strategies centered on social justice, critical analysis, empathy, and collective action, the allure of alt-right extremism among adolescents worldwide may be attenuated. This paper illuminates key insights from medical anthropology that can inform culturally-attuned responses to safeguard global youth from alt-right radicalization and promote societal inclusivity.

Introduction

In recent years, there has been growing concern about the allure of the alt-right and its ability to radicalize youth around the world through online spaces and communities (Lewis, 2018). The alt-right refers to a loose collection of individuals and groups promoting white nationalism and rejecting mainstream conservatism (Hawley, 2017). This fringe movement strategically targets young people, especially white adolescent males, by taking advantage of their psychological vulnerabilities and need for belonging (Davey & Ebner, 2017). As youth get sucked into the alt-right pipeline, exposure to extremist ideologies and online echo chambers can have detrimental effects on mental health. A critical medical anthropology lens provides important insights into how structural violence and dominant power structures shape these mental health consequences. This paper will examine the mental health impacts of alt-right radicalization on global youth and propose potential solutions grounded in principles of social justice and trauma-informed care.

Healing Traditions Bonnie Blair O'Connor, 2010-08-03 The popularity and practice of alternative medicine continues to expand at astonishing rates In *Healing Traditions* Bonnie Blair O'Connor considers the conflicts that arise between the values and assumptions of Western scientific medicine and those of unconventional health systems Providing in depth examples of the importance and benefits of alternative health practices including the extraordinarily extensive and sophisticated HIV AIDS alternative therapies movement O'Connor identifies ways to integrate alternative strategies with orthodox medical treatments in order to ensure the best possible care for patients In spite of the long standing prediction that as science and medicine progressed and education became more generally available unconventional systems would die out they have persisted with undiminished vitality They have in fact experienced a reinvigoration and expansion during the last fifteen to twenty years In the United States this renewal is fueled by people representing a wide cross section of American society and most of them also use conventional medicine This eclecticism can result in conflicts between the values and assumptions of Western scientific medicine and those of unconventional health systems O'Connor demonstrates the importance of understanding how various belief systems interact and how this interaction affects health care She argues that through neutral observation and thorough description of health belief systems it is possible to gain an understanding of those systems to identify likely points of conflict among systems especially conflicts that may occur in conventional care settings and to

intervene in ways that ensure the best possible care for patients
