Anthropometry and Biomechanics Ronald Easterby, 2012-12-06 Assessment of the physical dimensions of the human body and application of this knowledge to the design of tools equipment and work are certainly among the oldest arts and sciences It would be an easy task if all anthropometric dimensions of all people would follow a general rule Thus philosophers and artists embedded their ideas about the most aesthetic proportions into ideal schemes of perfect proportions Golden sections were developed in ancient India China Egypt and Greece and more recently by Leonardo DaVinci or Albrecht Durer However such canons are fictive since actual human dimensions and proportions vary greatly among individuals The different physical appearances often have been associated with mental physiological and behavioral characteristics of the individuals Hypocrates about 460 377 BC taught that there are four temperaments actually body fluids represented by four body types The psychiatrist Ernst Kretschmer 1888 1964 proposed that three typical somatotypes pyknic athletic asthenic could reflect human character traits Since the 1940 s W H Sheldon and his coworkers devised a system of three body physiques endo meso ectomorphic The classification was originally qualitative and only recently has been developed to include actual measurements
