Immune Interferon Roumen G. Tsanev,Ivan Ivanov,2001-11-28 Now for the first time one comprehensive book summarizes and analyzes the numerous scientific papers and reviews covering selected aspects of the structure biological activities and clinical effects of immune interferon also known as interferon gamma IFN gamma Interferon gamma is a natural immune booster which has been synthesized and widely used in clinical cases ranging from infectious diseases to cancer as well as various metabolic disorders Having developed their own brand of interferon gamma the authors are well known in the scientific community In *Immune Interferon Properties and Clinical Applications* they bring together the extensive findings from twenty years of research since the discovery of the drug Focusing on the drug itself and not particular brands the book presents data on the properties of interferon gamma experimental data on its effects and its clinical applications

Dimorphic Fungi in Biology and Medicine D. Kerridge,F.C. Odds,Hugo Vanden Bossche,2012-12-06 Fungal dimorphism is a topic that sounds inherently too rarified to attract more than a specialist audience Yet some 230 individuals representing an eclectic mixture of interests from basic science to medical practice gathered in Churchill College Cambridge in September 1992 for a meeting devoted only to this subject The symposium was

the fourth in a series Topics in Mycology to be jointly organized by the Janssen Research Foundation and the International Society for Human and Animal Mycology The participants enjoyed a rich and varied diet of oral presentations and poster displays in the field of fungal morphogenesis This book sets down in print the material presented at the dimorphism symposium We think that the high quality of these papers conveys very well the flavor of what was an excellent meeting The selection of contributions in this volume covers very wide ground indeed Chapters devoted to some non pathogenic fungi are included because the scientific basis of morphological development belongs to the fields of cellular and molecular biology it does not recognize the boundary imposed by considerations of virulence of a fungus for a human host Yet morphogenetic change in those fungi that do cause human disease frequently appears to be a component of the pathological process many important pathogens change from a hyphal form in the external environment to a round form in infected tissues This relationship between dimorphism and pathogenicity is the point of contact between pure biology and medicine
