Antibodies Novel Technologies And Therapeutic Use:

Antibodies: Novel technologies and therapeutic use G. Subramanian, 2004 *Antibodies* G

Subramanian, 2011-04-04 If the antibody industry is to achieve its full potential in the next decade the individual technical potentials must be exploited the limitations must be addressed and lessons learned must be applied both to current purification methods and to the new technologies that continue to emerge This book presents an overview of the current advances applied in the manufacture of monoclonal antibody including concepts in development of manufacturing strategies importance of antibody fragments application of chromatography method development quality control effect of expression on antibody properties virus removal and safety pharmacokinetics regulatory aspects *Antibodies Volume 1 Production and Purification* together with *Volume 2 Novel Technologies and Therapeutic Use* will be of great value to all of those who are actively working in the field of antibodies *Volume 2 Novel Technologies and Therapeutic Use* brings to the forefront current advances in novel technologies for the manufacturing of monoclonal antibodies and also their extensive clinical importance Following on from *Antibodies Volume 1 Production and Purification* this volume concentrates on new technologies in the manufacture of monoclonal antibodies the application of antibodies in cancer therapy and functional genomic therapy the importance of antibodies and prospects of antibody engineering for the future **Antibodies** G. Subramanian, 2004-03-31 It is now over one hundred years since von Behring and Kitsato first concluded experiments that led to the use of passive immunisation employing antibodies raised in animals against tetanus and diphtheria toxins The advancement of technology both in manufacturing purity product in a cost effective way and the clinical research has proved that antibodies are one of the most successful products in biotechnology Monoclonal antibodies account for between one third and one half of all pharmaceutical products in development and human clinical trials Both the nature of monoclonal antibody therapies and the relatively large size of the monoclonal antibody dictate the production requirements for many of these therapeutics the monoclonal antibody product will be 100 kilogrammes or more per year It is widely acknowledged that there is currently a worldwide shortage of biomanufacturing capacity and the active pharmaceutical ingredient material requirements for these products are expected to increase Thus the industry is looking for new sources and extensive studies are being carried out not only for alternative technology to meet the needs but also to reveal the new therapeutic applications of antibodies This book brings to the forefront current advances in novel technologies for the manufacturing of monoclonal antibodies and also their extensive clinical importance The first four chapters give an overview of the new technologies and the successful application in the manufacture of monoclonal antibodies with clinical purity The next chapters address the application of antibodies in cancer therapy and functional genomic therapy **Modern Biopharmaceuticals, 4 Volume Set** Jörg Knäblein, 2005-10-28 The biopharmaceutical market has come along way since 1982 when the first biopharmaceutical product recombinant human insulin was launched Over 120 such products are currently being marketed around the world

including nine blockbuster drugs The global market for biopharmaceuticals which is currently valued at US 41 billion has been growing at an impressive compound annual growth rate of 21% over the previous five years With over one third of all pipeline products in active development are biopharmaceuticals this segment is set to continue outperforming the total pharmaceutical market and could easily reach US 100 billion by the end of this decade **Upstream Industrial**
