Eric Gershwin, 2013-11-26 Autoimmune diseases are characterized by the occurrence of antibodies reacting with self constituents of the body The fully updated third edition of Autoantibodies is an in depth review of the main autoantibodies identified up to now with particular emphasis on those that display a diagnostic or prognostic clinical value The new edition covers recent scientific advances diagnostic techniques and therapeutic technologies Each chapter is focused on a single family of autoantibodies This important reference contains historical notes definitions origins and sources of antigens recognized genetic associations mediated pathogenic mechanisms methods of detection as well as clinical utility disease prevalence and association diagnostic value sensitivity and specificity prognostic value This is an ideal reference for anyone involved in the field of autoimmune diseases Presents all known important autoantibodies in a single source focusing on the antibodies needed for autoimmune disorder diagnosis Includes clinical applications for each autoantibody along with general information Organized by disease and disorder type by autoantibody family and completely cross referenced **Immunofluorescence in Clinical Immunology** Wulf B. Storch, 2012-12-06 Immunofluorescence a suitable laboratory method for the microscopic demonstration of antigens and antibodies in biological materials useable for example to provide evidence for the pathogenesis of disease in histological or cytological preparations and for tumour cell differentiation For this reason immunofluorescence has a decisive role as the

method of choice for the diagnosis of auto immune diseases This primer on immunofluorescence techniques which first appeared in 1979 is a richly illustrated handbook suitable for everyday practical work in the laboratory useable as both an introduction to the subject as well as an atlas In hardly any other area of medicine are there so many new findings to report The second edition of this book is concerned not only with the detection methods which now form an essential and established part of diagnostic techniques but also with the most recent research results such as the discovery of antibodies against Auerbach's plexus and against podocytes *Autoantibodies* Rikard Holmdahl, Falk Nimmerjahn, Ralf J.

Cancer and Autoimmunity M.E. Gershwin, Yehuda Shoenfeld, 2000-03-27 Of the two disciplines in parallel development for two decades tumor immunology and transplantation immunology the latter has thrived and has led to some of the most critical discoveries in immunobiology The former continues to thwart both scientists and clinicians alike The goal of immunologists in modern day research is to develop a simple and effective means to manipulate cancer in vivo possibly encompassing several venues identifying a phenotypic marker and the use of either active or passive immunization include the use of passive reagents carrying warheads to selectively destroy cancer cells or altering the basic process of cell survival This excellent multidiscipline authored volume presents a theme which has not been well described before The papers include both basic and clinical science and range from sophisticated molecular biology to little more than phenomenology e.g. the increased association of cancer in some autoimmune diseases and increased presentation of autoimmune phenomena in malignant condition This however is state of the art This collection of themes will be of use not only to bench scientists but also to clinicians who treat patients The book represents progress at the cutting edge of this discipline and points the way to further developments in the black box of immunology **Henry's Clinical Diagnosis and Management by Laboratory**
