Products and Cancer Drug Discovery Frank E. Koehn, 2012-11-09 This volume will cover the natural products as they relate to cancer chemotherapy. The topics will include history and current status, recent launches, new clinical candidates and approved drugs directly derived from natural products, current and future cancer target opportunities for natural products, leveraging natural products as tools for new target generation, new approaches to cancer drug discovery through natural products based lead generation and enabling technologies which leverage the unique attributes of natural products.

Anticancer Agents from Natural Products, Second Edition Gordon M. Cragg, David G. I. Kingston, David J. Newman, 2011-10-10 The approach to drug discovery from natural sources has yielded many important new pharmaceuticals inaccessible by other routes. In many cases the isolated natural product may not be an effective drug for any of several reasons but it nevertheless may become a drug through chemical modification or have a novel pharmacophore for future drug design. In summarizing the status of natural products as cancer chemotherapeutics, *Anticancer Agents from Natural Products Second Edition* covers the History of each covered drug, a discussion of its mechanism of action, medicinal chemistry, synthesis and clinical applications. Potential for novel drug discovery through the use of genome mining as well as future developments in anticancer drug discovery. Important biosynthetic approaches to unnatural natural products. *Anticancer Agents from Natural Products Second Edition* discusses how complex target oriented synthesis enabled by historic advances in methodology has enormously expanded the scope of the possible. This book covers the current clinically used anticancer agents that are either natural products or are clearly derived from natural product leads. It also reviews drug candidates currently in clinical development since many of these will be clinically used drugs in the future. Examples include the drugs etoposide and teniposide derived from the lead compound podophyllotoxin, numerous analogs derived from taxol, topotecan derived from camptothecin and the synthetic clinical candidates E7389 and HTI 286 developed from the marine leads halichondrin B and hemiasterlin. **Anticancer Agents from Natural Products** Gordon M.
