The Biomarkers, Mechanism, and

Therapeutic Strategies of Cancer Immunotherapy Resistance Mou Peng, Xin Jin, Yunliang Gao, Xiaoxin Ren, 2025-07-30

Over the decades cancer immunotherapy has been a burgeoning science in medicine and an established pillar of therapeutic options for diverse cancer types Leading the way to success is mainly the discovery and development of immune checkpoint inhibitors ICIs and chimeric antigen receptor CAR T cell based therapies Under immunotherapy a portion of cancer patients enables to achieve a significant and durable remission with a longer survival time particularly in those with lung cancer melanoma genitourinary cancer etc However striking disparities still exist in the effectiveness of anticancer immunotherapy and cause a great challenge to select appropriate candidates A large part of cancer patients presents limited or no response to immunotherapy mainly attributable to immunotherapy resistance Despite of great strides already made the exact

mechanism underlying immunotherapy resistance is still enigmatic Immunotherapy resistance is extremely complex and involves voluminous aspects such as tumor intrinsic factors aberrant expression of tumor antigens alterations of signaling pathways etc tumor extrinsic factors local tumor microenvironment etc and host related factors gender age etc More efforts should be made to characterize the underlying mechanism and uncover robust targets for a better response rate

Imaging and Mechanism of Leukocyte Recruitment and Function in Inflammation and Infections Zhichao

Fan,Yuqing Huo,Hao Sun,Xunbin Wei,2021-07-05 *Periodontitis* Anders Johansson,2020-11-18 Periodontitis is an infection induced inflammatory disease accounting for huge healthcare costs and socio economic impacts Bacteria from the indigenous oral flora colonize the interspace between the tooth and the connective tissue which induces an inflammatory response If the bacteria proliferate and release virulence factors they cause an imbalance in the host inflammatory response that induces degenerative processes in the surrounding tissues This process is often slow and the disease affects mainly older people but the process could be rapid and affect young individuals if certain pathogens colonize the area The two most studied periodontal pathogens Porphyromonas gingivalis and Aggregatibacter actinomycetemcomitans express virulence factors including proteases and exotoxins Periodontal bacteria and their products can be translocated to the peripheral circulation and are therefore linked to the risk pattern of several systemic diseases However it is not known if the increased risk for systemic disease associated with periodontitis is an effect of the invading bacteria and or their released products the release of components from the local inflammatory response or a common host susceptibility pattern The most studied periodontitis associated systemic diseases are cardiovascular diseases and rheumatoid arthritis Here we want to shed light on mechanisms behind the associations of periodontal infections with systemic inflammation **Combinational Immunotherapy of**

Cancer: Novel Targets, Mechanisms, and Strategies Xuyao Zhang,Xian Zeng,Yubin Li,Dianwen Ju,2024-01-15 Cancer immunotherapy including immune checkpoint inhibitors ICIs and chimeric antigen receptor T cell CAR T therapy has revolutionized the paradigm in cancer treatment However the clinical outcome of immunotherapy varies considerably among patients and only a minority of patients achieve long term clinical benefits This is largely attributed to the fact that existing cancer immunotherapies which concentrate on several classical targets CTLA 4 PD 1 PD L1 etc and limited types of immune cell populations T cells are insufficient to cope with the complexity of highly heterogeneous tumor microenvironment TME This calls for more efforts to not only expand our toolbox for manipulating anticancer immunity but also diversify our combinational strategies To this end it is urgent to deeper our understanding of cancer immunotherapy by using both experimental and computational methodologies from multi scale perspectives 1 novel targets from either tumor cells or non tumor cells within TME e g tumor intrinsic resistance drivers new immune checkpoints neoantigens 2 in depth characterization of more immune cell populations e g macrophages Tregs B cells and their interactions and dynamics within

TME 3 landscape of actionable targets in patient populations for combination design These efforts will open the avenue of rational design of combinational immunotherapies allowing researchers and clinicians to design novel targeting therapeutics or to optimally orchestrate combinatory strategies aiming to surmount resistance mechanisms and improve clinical outcomes
