Antigen Absorption By The Gut:

Antigen Absorption by the Gut W.A. Hemmings, 2012-12-06 w A HEMMINGS The concept that proteins can enter cells whole is a difficult one Yet the model situations whereby this process may be studied have been known and investigated for many years Those situations arise through the specialization required to transfer immunoglobulins synthesized by the mother to the circulation of the fetus or newborn animal that is in the transmission of passive immunity to the young This always entails the protein crossing a continuous cellular barrier in the placenta or fetal membranes or in the intestinal epithelium The concept is hard to accept in terms of cell biology because it is difficult to envisage a mechanism whereby proteins can pass in quantity a cell membrane which is regulating the entry of solutes Brambell has put forward an hypothesis of such a mechanism restating it in The transmission of passive immunity from mother to young in 1970 In 1974 after his death a symposium was held in Bangor largely on this subject published as Maternofetal Transmission of Immunoglobulins Since then two further meetings have been held on gut transfer under the title of the present volume which is composed of papers drawn from these two meetings *Antigen Absorption by the Gut* W a Hemmings, Nutrient Modulation of the Immune Response Susanna Cunningham-Rund, 2020-08-26 This book demonstrates that nutrients play a direct role as co factors and regulators of the immune system The book also shows that modulating the immune response with nutrients can provide a fundamental approach to preventive medicine Containing nearly 2300 bibliographic citations as well as illustrative figures tables and micrographs this book is designed to be of interest to clinical immunologists immunology and vitamin researchers nutrition specialists paediatricians neonatologists and upper level undergraduate graduate and medical school students in these disciplines **Gut-Derived Infectious-Toxic Shock (GITS)** H. Ferguson, R.N.M. MacSween, 2012-12-06 We have been privileged to start our academic careers at the begin ning of the decade in which the immunological roles and hypersensitivity diseases of the gastrointestinal tract and liver have been defined In the early 1960s IgA was reported to be the main secretory immunoglobulin immunoblasts were shown to home to the intestinal mucosa and certain serum autoantibodies were described in patients with chronic liver disease Shortly thereafter IgE and Australia antigen were discovered Parallel advances in clinical investigation in particular closed biopsy techniques facilitated correlation of morphological changes with im munological mechanisms in disease of the gastrointestinal tract and liver Only 10 years later the concepts of immunity and hypersensitivity are regularly applied to the pathogenesis diagnosis treatment and prog nosis of many chronic diseases in these organs In designing this book we have attempted to integrate theorectical and clinical immunology as they pertain in 1975 our ultimate aim is aptly described by

Brachet as quoted by Professor Paronetto page 319 We would like to think that this review provides a basis for the next major advances in the fields of gastrointestinal and hepatic immunology As we see it the outstanding problem in both sites is how to produce protective immunity without hypersensitivity **Pediatric Allergy, Asthma and Immunology** Arnaldo Cantani,2008-01-23 Easy to understand and easy to use this essential book reflects the rapid progress in one of the most intriguing fields of medicine It offers state of the art information on basic immunology fetal neonatal immunology and many more fascinating areas **Innate Cells in the Pathogenesis of Food Allergy** Pamela Guerrerio,Simon Patrick Hogan,Ana Olivera,Karen Laky,2021-09-23 Prof Simon Hogan is the co inventor on patent PCT US2018 018618 Inhibition of Unfolded Protein response for Suppressing or preventing allergic reaction to food All other Topic Editors declare no potential conflicts of interest with regard to the topic theme Fruits, Vegetables, Corn and Oilseeds Processing Handbook H. Immunopharmacology of Epithelial Barriers Roy Goldie,1994-04-05 The realisation that epithelial tissues are not simply passive barriers to the adsorption of materials into internal environments has brought about an enormous growth of investigation of mucosal functions and their active and passive protective roles Epithelia are highly organized but complex structures subserving numerous functions including immunological defence The use of pharmacological tools in these systems is increasing which is improving our understanding of epithelial immunobiology This volume adopts a step by step approach whereby each chapter builds upon the previous one progressively adding important foundation information culminating in a series of chapters concerning particular epithelia including respiratory gastrointestinal renal and ocular The result is a comprehensive but integrated treatise of epithelial function and its immunopharmacology which aims to serve as an appropriate starting point at which the clinical pulmonologist and the research scientist can obtain an appreciation of some aspects of epithelial immunopharmacology as they are currently understood

Ontogeny of the Immune System of the Gut Thomas T. MacDonald,1990-09-24 The book highlights studies on the development of the mucosal immune system in the human fetus the factors important in the development of the various compartments of this system and the mechanisms by which the human neonate protects itself against gut allergy and infection Other topics include the development of the gut immune system in rodents and other veterinary species in which important areas such as the intestinal uptake of the maternal immunoglobulins have been characterized as well as immunocompetence of the human fetus The book provides essential reference material for immunologists pediatricians and other researchers interested in the features unique to the development of the gut immune system in utero and post natally in different species

Immunology of Human Infection André J. Nahmias, Richard J. O'Reilly, 2012-12-06 When we were first approached by the senior editors of this series to edit a book on interactions between the host and infectious agents we accepted this offer as an exciting challenge The only condition readily agreed upon was that such a book should focus on the immunology of infections in humans Our reasons if not biases were several fold We sensed that the fields of microbiology and immunology which had diverged as each was focusing on its individual search were coming together In agreement with the opinions expressed by Dr Richard Krause in the Introduction we strongly believed that the development of the immune system evolved in response to infectious agents and that the evolution of these agents was influenced in turn by the character of the host s responses An intensive examination of the multitude of primitive or more recently developed host defense mechanisms to determine their relative contribution to man s resistance to a given infectious agent appeared to us to be of crucial basic and practical interest Many immune mechanisms studied in animals were being explored in humans and it appeared timely to focus particularly on what was known about man s resistance to infectious agents correlating this information with lessons learned from relevant experiments in animal models

Local Immune Responses Of The Gut Timothy J. Newby, Christopher R. Stokes, 2019-06-04 First published in 1984 The main interest of this book is immunological The first chapter deals with the nature of the local immune system and discusses it within the context of the normal physiology of the gut
