Antigen Processing And Recognition:

Antigen Processing and Recognition James McCluskey,1991-09-03 This book provides a state of the art review of the processing presentation and subsequent recognition of antigens by T cells Topics discussed include the structure of MHC molecules the nature and specificity of human class II molecule interactions with peptide antigens the class II invariant chain antigen processing and presentation by class I MHC molecules the biology of antigen processing and the presentation and role of accessory molecules in T cell recognition Other chapters feature discussions about the T cell allorecognition of MHC molecules the recognition of minor antigens and the concept of superantigens Color plates demonstrate the three dimensional structure of MHC molecules and peptide antigen interaction with MHC molecules Diagrams illustrate antigen presentation pathways T cell receptor MHC interaction and accessory molecule interactions *Antigen Processing and Recognition* will be a valuable addition to the libraries of students and teachers of immunology as well as cell biologists who are looking for a unified view of this rapidly expanding subject *Antigen Processing and Recognition* ,2008 *Antigen Presentation* J. Lindsay Whitton,2013-03-07 Antigen presentation is central to the immune response and is instrumental in ensuring that the response mounted is that best suited to the eradication of the particular microbe faced In this volume experts in the field provide state of the art descriptions of the antigen presentation pathways How do viruses disrupt these critical pathways and to what effect Do all tissues present antigen in the same way If not why What are the consequences of dysfunctional antigen presentation seen in certain genetic disorders This book considers not only the molecular details but also their relevance to the whole organism Alternative Antigen Processing and Presentation in Immune Disorders Iñaki Alvarez,Luis C. Anton,Eddie A. James,2022-10-19 **Cumulated Index Medicus** ,1989 **Biomedical Index to PHS-supported Research** ,1987 **Immunology** Klaus D. Elgert,2009-09-08 Blends biology clinical science genetics and molecular biology of the immune system to provide a complete account of our knowledge of immunology New features include full color artwork and design over 50 new figures and text that has been completely revised to reflect the very latest references Incorporates a variety of pedagogical aids to assist students in the learning process including chapter outlines objectives and summaries as well as a self evaluation section **MHC Molecules: Expression, Assembly and Function** Robert G. Urban,Roman M. Chicz,2012-12-06 3 nan expression systems have been used to make MHC molecules containing a single peptide of interest To date fifteen single peptide class I structures incorporating three different HLA and two different H 2 allotypes isotypes and four additional class II structures two single peptide complexes and two superantigen complexes have been reported These advances have enabled us to study the atomic detail of antigen presentation and the general mechanisms behind peptide binding and begin to construct models of T cell recognition Another area of research which has exploded over the past five years has been the identification of MHC associated peptides There are several methods one can use to determine the sequence identity of MHC restricted peptides Historically the most successful

technique albeit crude and encumbered with serious limitations has been the use of overlapping synthetic peptides and T cell clones Unfortunately this method absolutely requires i knowledge of the target antigen ii availability of T cell clones and iii a relatively short overall length for the target source protein such that a set of overlapping peptides can be affordably synthesized Briefly the entire sequence of the target protein is chemically synthesized using overlapping peptides which are then screened for biological activity using standard T cell presentation assays Despite its limitations this method was used to identify the first immunodominant epitopes reported in the literature and continues to be used successfully today

Combinational Immunotherapy of Cancer: Novel Targets, Mechanisms, and Strategies Xuyao Zhang, Xian Zeng, Yubin Li, Dianwen Ju, 2024-01-15 Cancer immunotherapy including immune checkpoint inhibitors ICIs and chimeric antigen receptor T cell CAR T therapy has revolutionized the paradigm in cancer treatment However the clinical outcome of immunotherapy varies considerably among patients and only a minority of patients achieve long term clinical benefits This is largely attributed to the fact that existing cancer immunotherapies which concentrate on several classical targets CTLA 4 PD 1 PD L1 etc and limited types of immune cell populations T cells are insufficient to cope with the complexity of highly heterogeneous tumor microenvironment TME This calls for more efforts to not only expand our toolbox for manipulating anticancer immunity but also diversify our combinational strategies To this end it is urgent to deepen our understanding of cancer immunotherapy by using both experimental and computational methodologies from multi scale perspectives 1 novel targets from either tumor cells or non tumor cells within TME e g tumor intrinsic resistance drivers new immune checkpoints neoantigens 2 in depth characterization of more immune cell populations e g macrophages Tregs B cells and their interactions and dynamics within TME 3 landscape of actionable targets in patient populations for combination design These efforts will open the avenue of rational design of combinational immunotherapies allowing researchers and clinicians to design novel targeting therapeutics or to optimally orchestrate combinatory strategies aiming to surmount resistance

Cancer Stem Cells and Cancer Therapy Rasime Kalkan,2024-12-31

This book explores the importance of cancer stem cells and their usage Cancer is a serious health issue that affects people all over the world Numerous studies back up the theory that stem cells play a role in cancer development The population of cancer stem cells CSCs exhibits tumorigenic potential and possesses stem cell specific markers and characteristics such as self renewal proliferation and differentiation Carcinogenesis may be significantly influenced by CSCs Currently treatment techniques concentrate on eliminating the CSC subpopulation using various methods such as bypassing CSC resistance mechanisms or focussing on important biochemical pathways that govern these cells New approaches are still required even though the negative effects of current treatment approaches are minimal The information that has been gathered on the stem cell theory of carcinogenesis the impact of dysregulated stem cell self renewal on cancer transformation and the functions of CSCs in cancer treatment are presented in this book We also discuss how a deeper comprehension of the biology behaviour and environment of CSCs can advance the use of these cells in cancer therapy and lead to the development of more potent cancer treatment plans Given its scope Cancer Stem Cells and Cancer Therapy is an indispensable resource not only for researchers working in the field of human biology and cancer research but also for advanced students seeking an introduction to cancer stem cells and their therapeutic usage
