Antiglobulins, cryoglobulins and glomerulonephritis G. Ponticelli, Luigi Minetti, G. D'Amico, 2012-12-06 RICHARD J GLASSOCK Introducing a scientific symposium is an uncertain and difficult task The remarks must not be too specific lest the participant's later contributions be intruded upon yet an overview of the goals and objectives of the conference should be presented in an inquisitive and stimulating fashion Perhaps a compromise position would be to make a few general statements and pose a limited number of questions which hopefully would then be addressed during the formal or informal portions of the meeting A conclusion incorporating the relevance of the specific topic to the more rating some perspectives global issues of disease and its consequences might be appropriate The goals and objectives of this conference as set forth by its organizers Professors Ponticelli D'Amico and Minetti are rather simple and straight forward namely to review and elucidate the immunopathophysiology of cryoimmunoglobulins and auto antibodies to immunoglobulins Ig and secondarily to explore the possible participation of these disordered states in glomerular injury As such this conference is principally devoted to an analysis of two properties of certain species of the globulin fraction of serum proteins specifically the ability to self associate on the basis of immune interactions and to form insoluble aggregates when exposed to reduced ambient temperature As we shall see these two properties are often distinctly related The Treatment of Glomerulonephritis C.D. Pusey, 2007-05-28 Glomerulonephritis is one of the commonest causes of end stage renal failure worldwide Although there have been considerable advances in the management of renal failure by dialysis and transplantation there has been relatively little progress in its prevention This volume sets out to review current practice in the treatment of glomerulonephritis which is aimed both at controlling the clinical manifestations e.g. nephrotic syndrome and at preventing the progression to renal failure The term glomerulonephritis covers a wide range of conditions with different immunological histological and clinical features This volume therefore starts with reviews of the immunology and pathology of different types of glomerulonephritis This is followed by detailed consideration of the treatment of the commoner primary and secondary forms of the disease There are separate chapters on special circumstances such as glomerulonephritis in pregnancy or following renal transplantation In each chapter attempts are made to review the evidence for the effectiveness of treatment based on controlled trials immunopathological principles and the authors considerable experience Although some aspects of the treatment of glomerulonephritis can be found in the standard texts on renal disease this volume provides an up to date thoroughly referenced and practical guide to management As such it should be of value to nephrologists and general physicians including those in training and to postgraduate students of nephrology **The kidney in plasma cell dyscrasias** Luigi Minetti, G.
