Munekata, Mirian Pateiro, Daniel Franco, José M. Lorenzo, 2021-09-02 The processing of pork is a common technological practice that modifies the taste flavor texture and color of raw pork meat Due to pork s accessible price and versatility the manufacture of pork products to offer a variety of options to consumers is an important strategy of the meat industries in this sector to improve profits and expand into new markets at the local regional and international levels The diversity of pork

products reflects the diversity and history of many local cultures around the world as well as a growing interest in preserving traditional processing practices. **Pork Meat Quality and Processed Meat Products** delves into the various kinds of pork and the methods used to prepare it for consumption including fresh meat products, fermented sausages, dry cured products, blood sausages and cooked sausages. Each category starts with a specific raw material: entire cut vs minced pork meat to which is added a unique combination of ingredients e.g. sodium chloride, starter cultures, blood seasoning and spices. The method of processing such as salting, drying, thermal processing and fermenting takes consumer tastes and storage needs into account as well as how each product will be consumed: cooked, sliced, spread and as an ingredient in other dishes for instance. Consequently a wide range of products made from pork are currently being produced worldwide. Added to this is the increasing importance of ingredients and health factors to consumers; the resulting demand for products that address specific health concerns is having a significant impact on research into and the production of pork meat products.

**Key Features**  
Comprehensively presents and discusses the wealth of information about pork products. Includes specific details about the processing quality of final products and innovation in the industry. Presents innovative health oriented approaches to making traditional and commercial pork products. Discusses healthier pork meat products that address consumer trends and government recommendations. The production of health oriented pork products is an emerging and promising investigation area with a direct impact on the current market for meat products.

**Medicinal Plants and Foods** Gema Nieto, 2020-11-20  
Medicinal plants or medicinal herbs have been identified and used since ancient times to improve the sensory characteristics of food. The main compounds found in plants correspond to four major biochemical classes: Polyphenols, terpenes, glycosides and alkaloids. Plants synthesize these compounds for a variety of purposes including protection of the plant against fungi and bacteria, defense against insects and attraction of pollinators and dispersal agents to favor the dispersion of seeds and pollens.

**Safety and Quality Issues in Fish Processing** H A Bremner, 2002-07-25  
The processing and supply of fish products is a huge global business. Like other sectors of the food industry it depends on providing products which are both safe and which meet consumers increasingly demanding requirements for quality. With its distinguished editor and international team of contributors, **Safety and quality issues in fish processing** addresses these two central questions. Part one looks at ways of ensuring safe products. There are 3 chapters on the key issue of applying HACCP systems in an increasingly international supply chain. These are complemented by chapters on identifying and controlling key hazards from pathogens and allergens to heavy metals, parasites and toxins. Part two contains a range of contributions analysing various aspects of fish quality. Two introductory chapters consider how concepts such as quality, freshness and shelf life may be defined. This chapter provides a context for chapters on modelling and predicting shelf life, key enzymatic influences on postmortem fish colour, flavour and texture and the impact of lipid oxidation on shelf life. Part three of the book looks at ways of improving quality through the supply chain. An initial chapter sets the scene by looking at ways of creating an integrated quality chain. There are then a

series of chapters on key processing and preservation technologies ranging from traditional fish drying to high pressure processing These are followed by a discussion of methods of storage particularly in maintaining the quality of frozen fish Two final chapters complete the book by looking at fish byproducts and the issue of species identification in processed seafood As authoritative as it is comprehensive Safety and quality issues in fish processing is a standard work on defining measuring and improving the safety and quality of fish products Addresses how to provide fish products which are safe and also meet consumers increasingly demanding requirements for quality Examines ways of ensuring safe products from the application of HACCP systems in an international supply chain to the identification and control of hazards from pathogens allergens heavy metals parasites and toxins Outlines how to identify and control hazards from pathogens and allergens to heavy metals parasites and toxins Chemical, Biological, and Functional Aspects of Food Lipids Zdzislaw Z.
