Antipredator Defenses In Birds And Mammals:

Antipredator Defenses in Birds and Mammals Timothy M. Caro, 2005-09 Tim Caro explores the many varied ways in which prey species have evolved defensive characteristics and behaviour to confuse outperform or outwit their predators from the camouflaged coat of the giraffe to the extraordinary way in which South American sealions ward off the attacks of killer whales

The Ecology of Large Mammals in Central Yellowstone Robert A. Garrott, Patrick J. White, Fred G.R. Watson, 2008-11-25 This book is an authoritative work on the ecology of some of America's most iconic large mammals in a natural environment and of the interplay between climate landscape and animals in the interior of the world's first and most famous national park Central Yellowstone includes the range of one of the largest migratory populations of bison in North America as well as a unique elk herd that remains in the park year round These populations live in a varied landscape with seasonal and often extreme patterns of climate and food abundance The reintroduction of wolves into the park a decade ago resulted in scientific and public controversy about the effect of large predators on their prey a debate closely examined in the book Introductory chapters describe the geography geology and vegetation of the ecosystem The elk and bison are then introduced and their population ecology described both pre and post wolf introduction enabling valuable insights into the demographic and behavioral consequences for their ungulate prey Subsequent chapters describe the wildlife human interactions and show how scientific research can inform the debate and policy issues surrounding winter recreation in Yellowstone The book closes with a discussion of how this ecological knowledge can be used to educate the public both about Yellowstone itself and about science ecology and the environment in general Yellowstone National Park exemplifies some of the currently most hotly debated and high profile ecological wildlife management and environmental policy issues and this book will have broad appeal not only to academic ecologists but also to natural resource students managers biologists policy makers administrators and the general public Unrivalled descriptions of ecological processes in a world famous ecosystem based on information from 16 years of painstaking field work and collaborations among 66 scientists and technical experts and 15 graduate studies Detailed studies of two charismatic North American herbivore species elk and bison Description of the restoration of wolves into central Yellowstone and their ecological interactions with their elk and bison prey Illustrated with numerous evocative colour photographs and stunning maps

Herding Monkeys to Paradise John Knight, 2011-05-27 This book is a study of the use of monkeys as a tourist attraction in Japan Monkey parks are popular visitor attractions that display free ranging troops of Japanese macaques to the paying public The parks work by manipulating the movements of the monkey troop through the regular provision of food handouts at a fixed site where the monkeys can be easily viewed This system of management leads to a variety of problems including proliferating monkey numbers park edge crop raiding and the sedentarization of the troop In addition to falling visitor numbers these problems have led to the closure or fencing in of many parks calling into question the future of the monkey park as an institution

Opossums Robert S. Voss, Sharon A. Jansa, 2021-03-09 The definitive volume on opossums a group of ecologically and scientifically important mammals covering natural history evolution behavior and biogeography Opossums are the most diverse and ecologically important group of New World marsupials although only the Virginia opossum is familiar to North American residents In fact many species of opossums are found in Neotropical rainforests savannas and other habitats where they are key participants in food webs and other ecological relationships One species the short tail opossum *Monodelphis domestica* has recently become a model organism for biomedical researchers Eclipsed in the public imagination by their Australian relatives opossums remained for many years a somewhat obscure group of interest primarily to taxonomists and students of mammalian reproduction While thousands of scientific articles have appeared in recent years on opossum systematics morphology behavior physiology genetics and ecology this important but widely scattered literature has never been effectively summarized until now In *Opossums* the first book length treatment of these fascinating organisms recognized authorities Robert S Voss and Sharon A Jansa synthesize a wide range of available information about the diversity comparative biology and natural history of the opossum Peering into every biological facet of the lives of these long neglected mammals the volume includes introductory chapters explaining the paleontological and biogeographic context for opossum evolution an overview of the extant fauna which includes over 100 species in 18 genera a section devoted to opossum phenotypes morphology physiology and behavior detailed information on opossum natural history including habitats diets predators and parasites in depth and novel interpretations of opossums adaptive radiation in a phylogenetic context Intended for undergraduate biology majors graduate students and research professionals this coherent and original portrait of opossums will be of particular interest to mammalogists evolutionary biologists and Neotropical field biologists as well as biomedical researchers working with *Monodelphis domestica* as a model organism

Predator-Prey Dynamics Michael R. Conover, 2007-03-30 Humans being visually oriented are well versed in camouflage and how animals hide from predators that use vision to locate prey However many predators do not hunt by sight they hunt by scent This raises the question do survival mechanisms and behaviors exist which allow animals to hide from these olfactory predators If so what are they and how do they work *Predator Prey Dynamics The Role of Olfaction* examines environmental as well as biological and behavioral elements of both predators and prey to answer gaps in our current knowledge of the survival dynamics of species Beginning with a thorough look at the mechanics of olfaction the author explains how predators detect locate and track their prey using odor trails on the ground or odor plumes in the air Understanding the physics of airflow is the next step to understanding the potential for manipulating and masking scent While a bush may conceal an animal visually from a predator it will not protect an animal from a predator using olfaction To hide from the latter an animal needs to hide in locations where turbulence and updrafts will disperse its scent The book addresses tradeoffs that animals must make given their dual needs to hide from predators and to procure food and water Studies of mammalian and avian behavior provide examples on the actual use and

efficacy of olfactory camouflage tactics The book concludes with a redefinition of ecological terms based on the physics of airflow and a summary of the theory and implications of olfactory predator prey dynamics Introducing the mechanics of olfaction and its influence on the behavior of both predators and prey Predator Prey Dynamics The Role of Olfaction presents a new perception of the world and enables us to understand and more effectively manage the delicate survival dynamics of animals in the wild

Wildlife Behavior and Conservation Richard H. Yahner, 2011-12-21 Begins with in depth coverage of wildlife behavior concepts as they relate to conservation problems Topics will focus principally on discussion critique and development of behavioral concepts with particular attention given to published studies on various topics in wildlife behavioral concepts as related to conservation and natural history He will include an extensive list of references

Ecology and Conservation of Tropical Ungulates in Latin America Sonia Gallina-Tessaro, 2019-11-20 This book brings together the latest information on tropical ungulates in different Latin American countries These animals are not only important from the point of view of their role in different ecosystems but also have cultural value for people The book also discusses topics such as habitat transformation and hunting as these species are an important source of food in many places Addressing ungulate natural communities in diverse ecosystems and countries the book provides information on specific aspects of each of the most representative species and highlights topics to help readers better understand these species and develop effective management and conservation strategies The information presented also reveals the need for more knowledge and will hopefully provide the incentive for continued studies on this important group of animals This publication serves as a reference for academic research on ungulate ecology behavior and dynamics as well as the basis for conservation strategies

Defensive (anti-herbivory) Coloration in Land Plants Simcha Lev-Yadun, 2016-10-20 This book presents visual plant defenses camouflage mimicry and aposematism via coloration morphology and even movement against herbivores It is mainly an ideological monograph a manifesto representing my current understanding on defensive plant coloration and related issues The book is not the final word in anything but rather the beginning of many things It aims to establish visual anti herbivory defense as an integral organ of botany or plant science as it is commonly called today I think that like in animals many types of plant coloration can be explained by selection associated with the sensory cognitive systems of herbivores and predators to reduce herbivory It is intended to intrigue and stimulate students of botany plant science and plant animal interactions for a very long time This book is tailored to a readership of biologists and naturalists of all kinds and levels and more specifically for botanists ecologists evolutionists and to those interested in plant animal interactions It is written from the point of view of a naturalist ecologist and evolutionary biologist that I hold considering natural selection as the main although not the only drive for evolution According to this perspective factors such as chance founder effects genetic drift and various stochastic processes that may and do influence characters found in specific genotypes are not comparable in their power and influence to the common outcomes of natural selection especially manifested when very many species

belonging to different plant families with very different and separate evolutionary histories arrive at the same adaptation something that characterizes many of the visual patterns and proposed adaptations described and discussed in this book Many of the discussed visual defensive mechanisms are aimed at operating before the plants are damaged i e to be their first line of defense In this respect I think that the name of the book by Ruxton et al 2004 Avoiding Attack is an excellent phrase for the assembly of the best types of defensive tactics While discussing anti herbivory I do remember study and teach physiological developmental aspects of some of the discussed coloration patterns and I am fully aware of the simultaneous and diverse functions of many plant characters in addition to defense

Convergent Evolution Vincent L. Bels, Anthony P. Russell, 2023-03-01 This volume presents a series of case studies at different levels of inclusivity of how organisms exhibit functional convergence as a key evolutionary mechanism resulting in responses to similar environmental constraints in mechanically similar ways The contributors to this volume have selected and documented cases of convergent evolution of form and function that are perceived to be driven by environmental abiotic and or biotic challenges that fall within their areas of expertise Collectively these chapters explore this phenomenon across a broad phylogenetic spectrum The sequence of chapters follows the organizational principle of increasing phylogenetic inclusivity rather than the clustering of chapters by perceived similarity of the phenotypic features or biomechanical challenges being considered This is done to maintain focus on the evolutionary phenomenon that is the primary subject matter of the book thereby providing a basis for discussion among the readership about what is necessary and sufficient to justify the recognition of functional convergence All chapters stress the need for integrative approaches for the elucidation of both pattern and process as they relate to convergence at various taxonomic levels

Animal Camouflage Martin Stevens, Sami Merilaita, 2011-07-07 In the last decade research on the previously dormant field of camouflage has advanced rapidly with numerous studies challenging traditional concepts investigating previously untested theories and incorporating a greater appreciation of the visual and cognitive systems of the observer Using studies of both real animals and artificial systems this book synthesises the current state of play in camouflage research and understanding It introduces the different types of camouflage and how they work including background matching disruptive coloration and obliterative shading It also demonstrates the methodologies used to study them and discusses how camouflage relates to other subjects particularly with regard to what it can tell us about visual perception The mixture of primary research and reviews shows students and researchers where the field currently stands and where exciting and important problems remain to be solved illustrating how the study of camouflage is likely to progress in the future

[The Oxford Handbook of Voice Perception](#) Sascha Frühholz, Pascal Belin, 2019 Speech perception has been the focus of innumerable studies over the past decades While our abilities to recognize individuals by their voice state plays a central role in our everyday social interactions limited scientific attention has been devoted to the perceptual and cerebral mechanisms underlying nonverbal information processing in voices The Oxford Handbook of Voice Perception takes a
